This is a mock letting for the Construction Management class at SDSU being instructed by Gary Johnson with A-G-E Corporation. All contracting parties are invited and encouraged to participate in an effort to make this a realistic experience for the students.

Subcontractors and Suppliers should submit their mock quotes to Gary by fax (605-223-2767), phone (605-223-2732), or email (agecorp@dakota2k.net). Contractors will be allowed to participate as Prime Bidders in the mock letting and should submit mock bids through the South Dakota Electronic Bidding System (SDEBS). Bid results will be posted on the bid letting website Friday, May 6, 2016.

Thank you to all contractors, subcontractors, and suppliers for your help and support.

GRADING NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	5	65

WORK TO BE PERFORMED BY DAVISON COUNTY

The County will perform the following items without Federal Participation:

1. Arrange for Right Of Way and temporary and permanent easements.
2. Arrange for Utility adjustments.
3. Arrange for Permanent signing.
4. Removal of silt fence when vegetation has become established in areas where permanent seeding is required.

GRADING OPERATIONS

Water for Embankment is estimated at the rate of 10 gallons of water per cubic yard of Embankment minus Waste. Water for Granular Material is estimated at 10 gallons of water per cubic yard of Aggregate Base Course.

The estimated cubic yards of excavation and/or embankment required to construct outlet ditches, ditch blocks, and approaches are included in the earthwork balance notes on the profile sheets.

Special ditch grades and other sections of the roadway different than the typical section shall be constructed to the limits shown on the cross sections. If significant changes to the cross sections are necessary during construction, the Engineer shall contact the Designer for the proposed change.

Generally, all shallow inlet and outlet ditches as noted on the plan sheets shall be cut with a 10-foot wide bottom with 5:1 backslopes. However, the Engineer may direct the Contractor to adjust the ditch width for proper alignment with the drainage structure.

Temporary fence and/or permanent fence shall be placed ahead of the grading operation unless otherwise directed by the Engineer.

RESTRICTED WORK AREA

The Contractor's work limits shall be confined to the area bounded within the Temporary Construction Easement Areas and Right-of-way. These will be marked in the field prior to beginning topsoil removal.

TYPE II FIELD LABORATORY

The lab shall be equipped with an internet connection such as DSL, cable modem, or other approved service. The internet connection shall be provided with a multi-port wireless router. The internet connection shall be a minimum speed of 512 Kb unless limited by job location and approved by the DOT. Prior to installing the wireless router the Contractor shall submit the wireless router's technical data to the Area Office to check for compatibility with the state's computer equipment. The internet connection is intended for state personnel usage only.

The Contractor's personnel are prohibited from using the internet connection unless pre-approved by the Project Engineer. All costs associated with the phone including purchasing, installation, disconnection, monthly line charges, local and long distance calls, and incidentals involved in the installation, maintenance, and disconnection of the phone (including attachments) shall be incidental to the contract unit price per each for "Type II Field Laboratory

UTILITIES

Central Electric has a 7,200 volt, 3-phase main feeder line along the length of this project, mostly in private land. Two road crossing will be required, one at each end of the project. Central Electric should have this work complete by mid-may and should not impact the Contractor's schedule.
Contact Brian Bulge at 996-7516 for further information.

Santel Communications has two lines along the length of this project, one of which is a fiber optic line. They are located on the south side of the road, one in the ditch and one near the old right of way line. Both lines will need to be relocated. Contact Mark Wilson at 796-4411 for more information.

CLEARING

Before clearing activities begin, the Contractor shall contact the Engineer ensure Temporary Construction Easement limits and daylight lines are staked. If the trees or shrubs that are suppose to remain within the limits of work are damaged or destroyed by the Contractor, the Contractor shall replace them with the same size and type at the Contractor's expense. Clearing shall include all trees, shrubs, stumps, and root balls within the project work limits. Extra large trees located very close to the outside limits of work limits can be reviewed with the Engineer and landowners on a case by case basis. Otherwise, trees to be removed are called out as shown on the Plan and Profile sheets. Trees and shrubs to be removed are so indicated by lighter shading versus existing trees to remain.

Table of Tree and Shrub Removals – Incidental to Clearing

STA	Offset	L/R
0+60 to 0+74	45'	R
0+79 to 1+13	35-36'	R

32+73 to 33+32	55-105'	L
33+99	35'	L
34+28	34'	L

REMOVE FENCE

All existing right of way fence shall be removed. Prior to beginning fence removal, Contractor shall coordinate with Engineer and review all locations where existing right of way fence will be removed, assess gates, accesses, and rail road tie posts. All fence removal is considered incidental to Clearing.

Table of Fence Removal – Incidental to Clearing

STA to STA	Offset	L/R
0+29 to 11+25	17' to 160'	L
2+61 to 22+30	25' to 120'	R
11+79 to 22+28	19' to 147'	L
22+81 to 45+00	25' to 120'	R
22+96 to 52+27	33' to 91'	L
45+70 to 52+34	35' to 80'	R

Numerous railroad ties are in place as fence corners on the south side of the project. These shall be removed and stockpiled for the landowner as part of Incidental Work, Clearing.

ARCHAEOLOGICAL SITE

Two weeks prior to commencing grading operations, the Contractor shall contact Jim Donohue, State Archaeological Research Center (SARC), at 605-394-1936, so that a qualified archaeologist can stake an archaeological site (39DV55). This site is in the vicinity of the project north of the existing box culvert (STA 8+00, Left) and outside the construction limits. The archaeologist will delineate an area not to be disturbed and the Engineer will set lath and flagging for this area as designated "keep out".

WATER SOURCE

The Contractor shall not withdraw water with equipment previously used outside the State of South Dakota without prior approval from the DOT Environmental Office.

The Contractor shall not withdraw water directly from streams of the James, Big Sioux, and Vermillion watersheds without prior approval from the DOT Environmental Office.

The DOT Environmental Office contact is the Environmental Project Scientist, 605-773-3268. The WATER SOURCE plan note does not relieve the Contractor of his/her responsibility to obtain the necessary permits from other agencies such as the Department of Environment and Natural Resources (DENR) and the United States Army Corps of Engineers (COE).

GRADING NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	6	65

WORK AFFECTING WATERWAYS WATER QUALITY

Surface Water Quality

The Contractor is advised the South Dakota Surface Water Quality Standards, administered by the Department of Environment and Natural Resources (DENR), apply to this project.

Twelve Mile Creek and the North Branch of Twelve Mile Creek are classified as a warm water, semi permanent fisheries with a total suspended solids standard of 150 milligrams/liter.

Twelve Mile Creek and the North Branch of Twelve Mile Creek is classified as fish and wildlife propagation, recreation, irrigation and stock watering waters. Because of these beneficial uses, special construction measures may have to be taken to ensure that this water body is not impacted.

Surface Water Discharge

If construction dewatering is required, the Contractor is required to obtain a Surface Water Discharge Permit from the DENR. Contact the DENR Surface Water Program at 605-773-3351 to apply for a permit.

Twelve Mile Creek and the North Branch of Twelve Mile Creek are classified as a warm water, semi permanent fishery with a Surface Water Discharge standard of 150 milligrams/liter total suspended solids.

Twelve Mile Creek and the North Branch of Twelve Mile Creek is classified as fish and wildlife propagation, recreation, irrigation and stock watering waters. Because of these beneficial uses, special construction measures may have to be taken to ensure that this water body is not impacted.

Storm Water

The Contractor is advised this project is regulated under the Phase II Storm Water Regulations and must receive coverage under the DENR General Permit for Construction Activities. A Notice of Intent (NOI) will be submitted to DENR a minimum of 15 days prior to project start by the DOT Environmental Office. A letter must be received from DENR that acknowledges project coverage under this general permit before project start. The Contractor is advised that permit coverage may also be required by offsite activities, such as borrow and staging areas, which are the responsibility of the Contractor.

A major component of the storm water construction permit is development and implementation of a storm water pollution prevention plan (SWPPP). This plan is a joint effort and responsibility of the DOT and the Contractor. The SWPPP is a dynamic document and is to be available on-site at all times. Information on storm water requirements and SWPPP are available on the following websites:
DOT: http://www.sddot.com/pe/projdev/environment_stormwater.asp
DENR: http://www.denr.sd.gov/des/sw/stormwater.aspx

A. SEASONAL WORK RESTRICTIONS

The State of South Dakota has designated warm water fisheries associated with this project. Placement of fill and/or in-stream work should not take place during the Seasonal Work Restriction to avoid conflicts with spawning fish. If flows during this time are nonexistent or extremely low, the seasonal use restriction may not be applicable. The Contractor shall not conduct in-stream work during the Seasonal Work Restriction without prior approval from the Environmental Project Scientist of the DOT Environmental Office, 605-773-3268.

TABLE OF WARM WATER FISHERIES

Stream Name	Stream Classification	Seasonal Work Restriction
Twelve Mile Cr	Warm Water	April 1 to June 30
N Branch Twelve Mile Creek	Warm Water	April 1 to June 30

B. CONSTRUCTION PRACTICES FOR STREAMS INHABITED BY TOPEKA SHINER

The US Fish and Wildlife Service (USFWS) has designated Topeka Shiner Streams associated with this project. The Contractor shall adhere to the "Special Provision for Construction Practices in Streams Inhabited by the Topeka Shiner".

The DOT contacts for Topeka Shiner issues are the Project Engineer and the Environmental Project Scientist of the DOT Environmental Office, 605-773-3268.

TABLE OF PROTECTED WATERWAYS (TOPEKA SHINER STREAMS)

Station	Stream Name
4+50	N Branch Twelve Mile Creek
8+20	N Branch Twelve Mile Creek
22+55	Twelve Mile Creek
31+50	Twelve Mile Creek

C. CONSTRUCTION PRACTICES FOR TEMPORARY WORKS IN PROTECTED WATERWAYS

No excavation shall be made below the ordinary high water elevation in Protected Waterways outside of caissons, cribs, cofferdams, steel piling, or sheeting; and the natural streambed shall not be disturbed without permission from the Engineer. Refer to the Table of Protected Waterways for ordinary high water elevations.

All dredged or excavated materials shall be placed at a site above the ordinary high water elevation in a confined area (not classified as a wetland) to prevent return of such material to the waterway.

The construction of temporary work platforms, crossings, or berms below the ordinary high water elevation will be allowed provided that all material placed below the ordinary high water elevation consists of Class B or larger riprap.

All temporary caissons, cribs, cofferdams, steel piling, sheeting, work platforms, crossings, and berms shall be removed with minimal disturbance to the streambed. Proper construction practices shall be used to minimize increases in suspended solids and turbidity in the waterway.

Bridge berms, wing dams, traffic diversions, channel reconstruction, grading, etc. shall be constructed in close conformity with the plans to ensure that the hydraulic capacity of the waterway is not changed.

Temporary waterway crossings required for the Contractors construction operations shall be constructed with an adequate drainage structure size and minimum fill height to reduce the potential for upstream flooding. The Contractor will be responsible for sizing the temporary drainage structure for these crossings.

HISTORICAL PRESERVATION OFFICE CLEARANCES

To obtain State Historical Preservation Office (SHPO) clearance, a cultural resources survey may need to be conducted by a qualified archaeologist. In lieu of a cultural resources survey, the Contractor could request a records search from Jim Donohue, State Archaeological Research Center (SARC). Provide SARC with the following: a topographical map or aerial view on which the site is clearly outlined, site dimensions, project number, and PCN. If applicable, provide evidence that the site has been previously disturbed by farming, mining, or construction activities with a landowner statement that no artifacts have been found on the site. The Contractor shall arrange and pay for the cultural resource survey and/or records search.

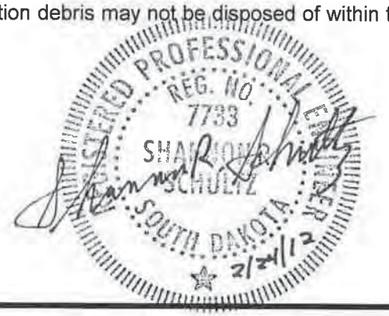
If any earth disturbing activities occur within the current geographical or historic boundaries of any South Dakota reservation, the Contractor shall obtain Tribal Historical Preservation Office (THPO) clearance. If no THPO exists, the required SHPO clearance shall suffice, with documentation of Tribal contact efforts provided to SHPO.

To facilitate SHPO or THPO responses, the Contractor should submit a records search or cultural resources survey report to the DOT Environmental Engineer, 700 East Broadway Avenue, Pierre, SD 57501-2586 (605-773-3268). Allow 30 days from the date this information is submitted to the Environmental Engineer for SHPO/THPO approval. The Contractor is responsible for obtaining all required permits and clearances for staging areas, borrow sites, waste disposal sites, and all material processing sites. The Contractor shall provide the required permits and clearances to the Engineer at the preconstruction meeting.

WASTE DISPOSAL SITE

The Contractor will be required to furnish a site(s) for the disposal of construction/demolition debris generated by this project.

Construction/demolition debris may not be disposed of within the County ROW



GRADING NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	7	65

WASTE DISPOSAL SITE - CONTINUED

1. Construction/demolition debris consisting of concrete, asphalt concrete, or other similar materials shall be buried in a trench completely separate from wood debris. The final cover over the construction/demolition debris shall consist of a minimum of 1 foot of soil capable of supporting vegetation. Waste disposal sites provided outside of the County ROW shall be seeded in accordance with Natural Resources Conservation Service recommendations. The seeding recommendations may be obtained through the appropriate County NRCS Office. The Contractor shall control the access to waste disposal sites not within the County ROW through the use of fences, gates, and placement of a sign or signs at the entrance to the site stating "No Dumping Allowed".

2. Concrete and asphalt concrete debris may be stockpiled within view of the ROW for a period of time not to exceed the duration of the project.

   Prior to project completion, the waste shall be removed from view of the ROW or buried and the waste disposal site reclaimed as noted above.

The above requirements will not apply to waste disposal sites that are covered by an individual solid waste permit as specified in SDCL 34A-6-58, SDCL 34A-6-1.13, and ARSD 74.27:10:06.

Failure to comply with the requirements stated above may result in civil penalties in accordance with South Dakota Solid Waste Law, SDCL 34A-6-1.31.

All costs associated with furnishing waste disposal sites, disposing of waste, maintaining control of access (fence, gates, and signs), and reclamation of the waste disposal sites shall be incidental to the various contract items.

Box Culvert Installation	3,746
Total	67,889

Plan quantities will be used for final payment unless changes are approved by the Engineer and then the respective bid items will be adjusted accordingly.

Note that Box Culvert Undercut is not included in this table and is paid under its own item.

Stockpiling topsoil estimated at 7,651 cubic yards is accounted for in this unclassified excavation table. Placing Topsoil is included under the bid items and notes for Erosion Control. Waste (earthen materials only) shall be used to fill in the stock dam located right of STA 32+00. See note below. Also, waste shall be used to rebuild six field approaches estimated at 200 cubic yards each.

UNDERCUTTING

In all cut sections, the earthen sub-grade shall be undercut 2 feet below finished sub-grade. The undercut material or other suitable material, as directed by the Engineer, shall be replaced and re-compacted to the density specified for the section being constructed. All sub-grade shall be compacted to at least 95% maximum dry density. Moisture conditioning may be required.

Shallow embankment sections, fills less than 2 feet in height measured at the finished subgrade shoulders, shall be undercut to assure a minimum 2 foot height of earth embankment for the entire width of roadbed. The upper 6 inches of undercut material that consists of topsoil with a high humus content shall be used as topsoil, placed in the fill-slopes outside the shoulders of the earthen subgrade, or placed in the lower portion (below 4 feet) of fills which are over 4 feet in height. The remaining undercut soil and soil obtained from adjacent excavation (excluding upper 6 inches) shall then be replaced and compacted to the density specified for the section being constructed.

A disk designed and constructed for construction purposes shall be in use as per Section 120.3, Standard Specifications.

The plan shown quantity will be the basis of payment. However, if there are additional areas of undercut other than what is shown in the plans, the Engineer shall direct removal of these areas and the additional areas will be measured according to the Engineer.

HAUL

Included in the estimate of quantities is Haul. It is not a pay item and is for information purposes only. Quantity calculated (CuYdSta) for moving unclassified excavation material to the locations where it is needed throughout the earthwork balance.

MUCK EXCAVATION

500 cubic yards of Muck Excavation is included for bidding purposes. Muck Excavation may be encountered during the removal of the existing box culvert and associated channel realignment. Muck Excavation is assumed to be required for the stock dam and area inside the roadway prism. This is assumed to be 2,760 square feet x 2 feet deep or, 204 cubic yards.

Ordinary excavation and removal of the existing box culvert is being paid for under the item Incidental Work-Grading. If the areas designated as muck excavation can be removed with similar equipment and procedures as used for unclassified excavation, the material shall be measured and paid for as "Unclassified Excavation".

Excavating muck trapped by a silt fence or wattle shall be paid for under Mucking Silt Fence.

Muck excavation consists of the removal of highly organic and/or highly saturated material. Highly organic muck material shall not be used in the embankment but may be used as topsoil. Non-organic muck material may be used as embankment outside of the fill subgrade shoulder if it is properly handled and dried prior to placement in the embankment.

Field measurement of all muck excavation will be made and agreed to in the field prior to performing muck excavation. Engineer orders additional excavation, or when the Engineer determines, in accordance with Section 120.3.A.1 of the Standard Specifications, that the classification of excavation be changed.

INCIDENTAL WORK, GRADING

This bid item shall cover work associated with the removal of existing pipe culvert at approaches and grading associated with building 6 new approaches. Note that 200 cubic yards of additional unclassified excavation for each approach is included under Unclassified Excavation for this purpose. Final location of field approaches will be determined in the field based on land owner preferences. Farm field approaches shall comply with Standard Detail 320.10.

Davison County will remove all signs prior to construction. Davison County will also set new signs prior to opening to traffic. There are 19 existing signs including stop signs and street signs, some or all of which will be removed at the discretion of the County. However, the stop signs (4) may be temporarily needed during traffic control operations so they will need to be removed and reset by the Traffic Control subcontractor as required. Also, the street name signs (2) located at each end of the project may be removed and reset as part of incidental work or the County may choose to install new ones as part of their full signage installation.

16+98 L	Take out 26' of 18" CMP, rebuid field entr.
18+87 L	Take out 42' of 18" CMP, rebuild field entr.
45+40 R	Take out 40' of 18" CMP, rebuilt field entr.

INCIDENTAL WORK, GRADING (removal of existing box culvert)

Station	Remarks
8+22	Remove existing 10' x 10' RCBC Keep in place until new box completed

This bid item shall also cover all costs associated with the removal of the existing 10'x10' RCBC including back fill and compaction. Compaction of sub-grade shall occur at least every 2' while obtaining at least 95% of maximum dry density throughout the back fill. Compaction of earth embankment and box culvert backfill material shall be governed by the Specified Density method.

For bidding purposes, the existing box culvert is a 10' x 10' cast in place box culvert with flared wing walls in good condition approximately 50 feet long and is buried to its invert approximately 15 deep as measured from the bottom of the undercut.

SALVAGE RIPRAP

Starting at STA 6+36 and 32' R, an old riprap apron shall be salvaged for later use on site. This area is estimated to be 1000 square feet and the uneven and washed out riprap appears to be approximately 1 feet deep. No field measurements will be made and the basis of payment to salvage this riprap is based on 37 cubic yards.

FILL IN MAN-MADE STOCKDAM

Approximately 1,955 cubic yards of waste excavation shall be used for filling in the man made stock dam located right of STA 31+00 to STA 32+50. The existing surface area of the pool is 6,600 square feet and is estimated to be 8 feet deep from Elev 1517.7'. This is considered incidental to excavation operations whereby wasted excavated material shall be used to backfill.

During back fill of this stock dam, ordinary compaction procedures shall apply as progress is made and the subgrade begins to firm and support construction equipment. Formal compaction to 92% standard proctor density by mechanical means shall be done in two foot lifts. The last foot of subgrade fill and topsoil shall not be compacted. Filling stock dam shall not be used as an on-site waste receptacle for garbage, debris, etc. No deleterious material other than native soils shall be placed as fill into the stock dam. It is assumed that pumping will be required for draw down. Any pumping will be incidental to other bid items. Pump discharge area shall not cause erosion or sediment transport. Use existing or new erosion control items as necessary.

At the bottom of the ponded area and within the limits of roadway construction, Muck Excavation is assumed to be required. This is assumed to be 2,760 square feet x 2 feet deep or, 204 cubic yards.

EXCAVATION FOR REINFORCED CONCRETE BOX CULVERT INSTALLATION

Included in the quantity of Unclassified Excavation are 3,746 cubic yards of excavation for installation of reinforced concrete box culverts.

All work necessary to excavate a trench for installation of reinforced concrete box culverts including labor, equipment, and incidentals shall be incidental to the contract unit price per cubic yard for Unclassified Excavation. Payment for excavation of reinforced concrete box culverts shall be based only on plans quantity and measurement of these excavation quantities during construction shall not be performed.

The excavation quantities for installation of reinforced concrete box culverts are not included with the earthwork balance quantities on the plans profile sheets. The quantities computed for excavation of the reinforced concrete box culverts are based on the limits shown in the drawing below. For pipe bedding material, see Section 421 of Standard Specifications. Compaction of earth embankment and box culvert backfill material shall be governed by the Specified Density method.

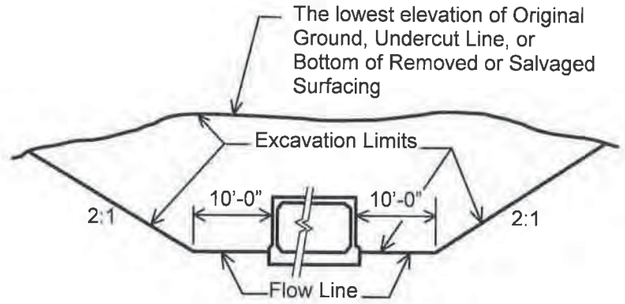

TABLE OF EXCAVATION FOR REINFORCED CONCRETE BOX CULVERT INSTALLATION

Station	Quantity (CuYd)
7+86	3,746
Total:	3,746

INSLOPE TRANSITIONS

Inslope transitions will be required at various drainage structures and stream channel changes. Refer to Standard Plate 120.05 for details. Inslope transitions have been accounted for in the mass haul and grading calculations as shown in the Table of Excavation Quantities By Balances.

TABLE OF INSLOPE TRANSITIONS

Station	L/R	Comment
4+40	L	No inslope change, CH-CH #1
6+75	L/R	Proposed Box Culvert

23+50	L/R	Back to typical
28+55	L	No inslope change, CH-CH #2
33+25	L	Back to Typical

GRADING NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	9	65

Revised 3/16/12: SRS

SALVAGED ITEMS

All salvaged items noted on the plans shall be salvaged for future highway use and hauled to the Davison County Highway shop as directed by the Engineer. The County wants all CMP pipe salvaged. See Table of Pipe Quantities. Care shall be taken not to damage the structural properties of the items during dismantling and transporting. All broken concrete and materials not salvaged shall be disposed of in accordance with the Standard Specifications. All costs for salvaging and transporting the items shall be incidental to the contract lump sum price for "Incidental Work, Grading". Before preparing his/her bid, the Contractor shall make a visual inspection of the project to verify the extent of the work and material involved.

CORRUGATED METAL PIPE

Corrugated metal pipes shall have 2 ⅔-inch X ½-inch corrugations for 42-inch and smaller round pipe and 48-inch and smaller arch pipe unless otherwise stated in the plans. Corrugated metal pipes shall have 3-inch X 1-inch or 5-inch X 1-inch corrugations for 48-inch and larger round pipe and 54-inch and larger arch pipe unless otherwise stated in the plans.

PIPE FOR APPROACHES and INTERSECTING ROADS

Class II reinforced concrete pipe may be substituted for corrugated metal pipe at approaches and intersecting roads at no additional cost to the County or State.

TRAFFIC DETOUR – MAINTENANCE OF TRAFFIC DIVERSION

A 3-mile detour will be required during construction and shall be installed according to these plans. Maintenance (occasional blading and retrieval on the graveled portions) of the 3 mile detour will be the Contractor's responsibility during construction and shall be included within the "Maintenance of Traffic Diversion" bid item. For bidding purposes, the Contractor shall assume that one complete maintenance operation will be required.

Davison County will supply road base material as needed. Road defects within the detour and other safety concerns shall be brought to the Engineer's attention immediately. Cross-slopes of existing gravel roads on detour shall be maintained to be between 3% and 4% while maintaining a center crown.

Installation and removal of the traffic detour shall meet all requirements as set forth in the South Dakota Surface Water Quality Standards. As the detour route is over existing county and township roads, no impacts to water quality are expected.

Adjacent landowners will require access into their fields during construction. The contractor shall coordinate with adjacent landowners and make every reasonable accommodation to provide access into their fields.

EXISTING GRANULAR BASE

This is an information note. The existing roadway is comprised of approximately 1 inch of reclaimed asphaltic road seal that has been ground into the top four inches of the existing aggregate base course. There is approximately 12 to 13 inches of this mixture of aggregate base course in place through the length of this project. Tree sap was used in the past as a bonding agent. For this reason, the existing aggregate base course cannot be used to supplement the new aggregate base course and may only be used as ordinary material under unclassified excavation operations and shall be treated as ordinary sub-grade. This material cannot be used where aggregate base or pipe bedding material is specified. However, the re-use of this material as back fill is encouraged. Normal undercutting procedures and compaction procedures shall be followed.

TYPE 2 RIGHT-OF-WAY FENCE

Right-of-way fence shall be installed as shown in the plans in accordance to Section 620 of the Standard Specifications and the standard plates. Brace panels shall be paid per each. Right-of-way fence will be measured and paid on a per foot basis including lengths of brace panels and wire gates.

Right-of-way fence shall be Type 2 with alternating wood and steel posts. The posts shall be placed within 1 foot of the right-of-way line on the land owner's property. The Owner's Representative and/or the Engineer will stake the corner post locations.

Final land negotiations with landowners may alter final locations of permanent right of way fence and whether it is installed on a given parcel. For bidding purposes, it is assumed that all landowners will want new right of way fence installed.

TYPE 1 TEMPORARY FENCE

Temporary fence shall be installed on the south side (right of station line) of the project along the temporary construction easement line. This is on land owned by Sigmund and Neugebauer starting at STA 0+35.95 to STA 52+49.52. See ROW Layout sheets.

Temporary Construction Easement locations will be staked in the field by the Engineer. Pull posts, braces, and gates will be installed and maintained as required and will be considered incidental to the price per foot of Type 1 Temporary Fence. Existing access shall be perpetuated at existing approaches.

Any loss or damages experienced by landowners due to failure in temporary fence will be the Contractor's responsibility. Price per foot bid includes installation, maintenance, and removal. Landowner requests to change locations of gates and accesses will be paid for per foot of Remove Fence and installation of new Type 1 Temporary Fence.
only.

SURFACING NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	10	65

BASE COURSE

Base Course shall consist of crushed material. A blend of Crushed recycled asphalt concrete and virgin materials may be used so long as materials comply with specifications and materials are preapproved by the Engineer. Base Course shall be from a contractor supplied source.

Base Course shall be placed to the dimensions and thickness indicated on the Typical Sections. Base Course shall be placed over prepared and approved subgrade after compaction of the undercut.

A quantity of 1,200 tons of base course has been added for bidding purposes in the event that unstable subgrade is encountered and requires further processing beyond ordinary undercutting, scarification, compaction, and moisture conditioning. Such digouts will be reviewed with the Engineer by the Contractor prior to proceeding with the use of this extra base course. Plan quantities for drainage fabric may be adjusted accordingly if needed. Weight tickets specific to this use of base course will be separate from regular base course within the **9"** section.

CLASS E ASPHALT CONCRETE

Virgin mineral aggregate for the Asphalt Concrete Composite shall conform to the requirements for Class E, Type 1. All other requirements for Class E shall apply.

The asphalt binder used in the mixture shall be PG 58-28, PG 58-34, PG 64-22, PG 64-28 or PG 64-34 Asphalt Binder.

Rates of Materials - The Estimate of Quantities is based on the following quantities of materials per station:

BASE COURSE

Crushed Aggregate	162.75 tons
Water for Granular Material	1.95 MGal
MC-70 Asphalt for Prime	0.42 tons (32' wide or 0.3 gal / sq yd)
Blotting Sand for Prime	1.33 tons (24' wide at 10 lbs / sq yd)

CLASS E ASPHALT CONCRETE – 1st and 2nd 1.5" LIFTS

Crushed Aggregate	25.22 tons
PG 64-22 Asphalt Binder	1.61 tons
Total	26.83 tons per station

Tack Coat	0.07 tons

Tack coat (SS-1h or CSS-1h Emulsified Asphalt) shall be applied prior to each lift at the rate of 0.07 tons applied 31 feet wide (0.05 gallons per square yard).

Additional quantities have been included for paving 5' into the approaches as per Standard Plate 320.10.

PAVEMENT MARKING PAINT

The pavement marking paint and glass beads shall be furnished and applied by the Contractor. Materials shall meet the requirements of Sections 633, 980 and 981 of the Standard Specifications. All materials shall be applied as per manufacturer's recommendations. Pavement markings shall be installed in accordance with the most current edition of the Manual on Uniform Traffic Control Devices (MUTCD).

Glass beads in accordance with Section 981 shall be applied at the rate of 8 lbs/Gallon of paint. The cost of glass beads will be incidental to the cost per foot for "Pavement Marking Paint".

Measurement and payment for furnishing and applying the painted pavement marking will be made to the nearest foot. The approximate paint application rates for one pass on a 4" wide stripe shall be as follows:

Yellow .... 250 feet per Gallon
White .... 250 feet per Gallon

Traffic Control shall be incidental to the cost of application. The striper and advance and trailing warning vehicle shall be equipped with flashing amber lights or advance warning arrow panel if not done while project is under detour phase of traffic control.

The Contractor shall coordinate with the Engineer prior to the application of the permanent pavement markings. Permanent pavement markings shall not be placed without the approval of the Engineer. All materials shall be applied per manufacturer's recommendations. Surface shall be swept, broomed, or vacuumed clean prior to painting.

Pavement marking paint application shall be completed no sooner than 48 hours after completion of Asphalt Concrete Paving. The application of Permanent Pavement Marking shall be completed within 10 calendar days following the completion of the asphalt pavement.

Station	WB/ EB/ C	Length of Section (Ft)	Quantity (Ft of paint) 4Y	Quantity (Ft of paint) 4W

EROSION CONTROL NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	11	65

PLACE TOPSOIL

The estimated amount of topsoil to be removed and replaced is 7,651 CuYd. All cost associated with removing and replacing the topsoil along areas to be resurfaced shall be incidental to the bid unit price per cubic yard of Placing Topsoil. Excavation of topsoil is accounted for the Unclassified Excavation quantities. Topsoil shall be stripped and stockpiled on site conveniently for placing. No topsoil is to leave the project area.

Soil borings show that there is approximately 6 inches of topsoil available and considered suitable for topping in-slopes, ditches, and back-slopes. This thickness of topsoil is considered to hold true for right-of-way area outside the back-slopes and in-slopes of the present grade. This includes low-velocity areas under the Type 3 Erosion Control Blanket prior to seeding.

DRILLS

In addition to the drills specified in Section 730 of the Standard Specifications, other types of drills including no-till drills will be allowed as long as they have baffles, partitions, agitators, or augers which keep the seed distributed throughout the seed box and the seed is planted at a depth of ¼" to ½" .

PERMANENT SEEDING

The areas to be seeded comprise of all newly graded areas within the project limits except for the top of roadways and temporary easements under cultivation. All permanent seed shall be planted in the topsoil at a depth of ¼" to ½".

All seed broadcast must be raked or dragged in (incorporated) within the top ¼" to ½" of topsoil when possible. This requirement may be waived by the Engineer during construction when raking or dragging is deemed not feasible by conventional methods. Type B Permanent Seed Mixture shall consist of the following:

Grass Species	Variety	Pure Live Seed (PLS) (Pounds/Acre)
Western Wheatgrass	Flintlock, Rodan, Rosana	7
Switchgrass	Dacotah, Forestburg, Nebraska 28, Pathfinder, Summer, Sunburst, Trailblazer	3
Indiangrass	Holt, Tomahawk	3
Big Bluestem	Bison, Bonilla, Champ, Pawnee, Sunnyview	3
Canada Wildrye	Mandan	2
	Total:	18

MULCHING (GRASS HAY OR STRAW)

Bales with noxious weed contamination will be rejected and the Contractor will be required to remove the contaminated bales from the project. Mulch rate is 4,000 pounds per acre placed uniformly after seeding followed immediately by punching in accordance with Standard Specification 732.

An additional 2.5 tons of Grass Hay or Straw Mulch has been added to the Estimate of Quantities for temporary erosion control on areas determined by the Engineer during construction for temporary stabilization.

EROSION BALES

Erosion bales for restraining the flow of water and sediment shall be placed at locations determined by the Engineer during construction. Refer to Standard Plate 734.02 for details.

Bales with noxious weed contamination will be rejected and the Contractor will be required to remove the contaminated bales from the project.

A quantity of 30 Erosion Bales has been included in the Estimate of Quantities for bidding purposes in the event that additional temporary sediment control measures are needed. Plan and Profile sheets do not call for Erosion Bales.

EROSION CONTROL WATTLE

Erosion control wattles for restraining the flow of runoff and sediment shall be installed at locations noted in the table and at locations determined by the Engineer during construction. Refer to Standard Plate 734.06 for details.

The Contractor shall provide certification that the erosion control wattles do not contain noxious weed seeds.

REMOVE EROSION CONTROL WATTLE

Erosion control wattles shall be removed BY COUNTY FORCES when vegetation is established. Some or all of the erosion control wattles may be left on the project until vegetation is established.

REMOVE AND RESET EROSION CONTROL WATTLE

Erosion control wattles may be removed and reset as necessary as work progresses. The erosion control wattles removed and reset shall be in useable condition. All costs for removing and resetting the erosion control wattles shall be incidental to the contract unit price per foot for "Remove and Reset Erosion Control Wattle". If a wattle location continues to wash out or fail, other erosion control measures shall be explored such as Erosion Bales or Silt Fence.

HIGH FLOW SILT FENCE

The high flow silt fence fabric provided shall be from the approved product list. The approved product list for high flow silt fence may be viewed at the following internet site:

http://apps.sd.gov/Applications/HC54ApprovedProducts/main.asp

High flow silt fence shall be placed at the locations noted in the table and at locations that will minimize siltation of adjacent streams, lakes, dams, or drainage areas as determined by the Engineer during construction. Refer to Standard Plate 734.05 for details.

An additional 82 feet of high flow silt fence has been added to the Estimate of Quantities for temporary sediment control.

The erosion control wattle provided shall be from the list shown below:

		Additional Quantity:	82
		Total:	**4,600**

MUCKING SILT FENCE

Mucking silt fence shall consist of removing muck trapped by the silt fence and spreading the material evenly over the adjacent area to conform to the existing grade.

REMOVE SILT FENCE

Silt fence shall be removed when vegetation is established BY COUNTY FORCES. Some or all of the silt fence may be left on the project until vegetation is established.

TYPE 3 EROSION CONTROL BLANKET

Type 3 Erosion control blanket shall be installed as per the typical sections shown for the channel changes at the locations noted in the table and at locations determined by the Engineer during construction.

The erosion control blanket provided shall be from the approved product list. The approved product list for erosion control blanket may be viewed at the following internet site:

http://apps.sd.gov/Applications/HC54ApprovedProducts/main.asp

The Contractor shall install erosion control blanket according to the manufacturer's installation instructions. An additional quantity of 42 square yards of Type 3 Erosion Control Blanket has been added to the Estimate of Quantities for temporary erosion control.

TABLE OF EROSION CONTROL BLANKET

Station to	Station	L/R	Location	Type	Quantity (SqYd)
4+46	5+54	L	bed protection on CH CH	3	123
6+51	8+07	R	ditch protection	3	260
6+75	7+55	L	ditch protection	3	128
7+66	9+27	L	ditch protection	3	268
8+18	9+49	R	ditch protection	3	218
21+25	22+88	L	ditch protection	3	284
22+19	23+53	R	ditch protection	3	220
23+17	23+54	L	ditch protection	3	57
			Additional Quantity:	3	42
			Total Type 3 Erosion Control Blanket:		**1,600**

For bidding purposes, a quantity 1000 Sq Yd of Type 1 Erosion Control Blanket has been added for the purpose of providing improved seedbed on slopes 3:1 and steeper and where ordinary mulching cannot be performed.

For bidding purposes, a quantity of 400 pounds of Fiber Mulching has been added for the purpose of providing an alternative to standard mulch in areas where slopes are 3:1 or steeper where ordinary mulching cannot be performed.

SHAPING FOR EROSION CONTROL BLANKET

The ditches shall be shaped for the erosion control blanket as specified on Standard Plate 734.01.

All costs for shaping the ditches for erosion control blanket including labor and equipment shall be incidental to the contract unit price per foot for "Shaping for Erosion Control Blanket".

TABLE OF TEMPORARY DIVERSION CHANNEL

The Contractor shall construct a temporary diversion channel in accordance with Standard Plate 734.30 at the locations listed in the following table.

Station	Quantity (Each)
8+22	1
Total:	1

The intent is to allow the North Branch of Twelve Mile Creek to continue to run through the existing box culvert as the diversion channel while the new box culvert is being installed. Therefore, work to build and maintain the temporary diversion channel should be minimal. Care shall be taken to protect the integrity of the subgrade and pipe bedding, back fill and compaction, of the new box culvert. Creek water shall not flow at any time through the area of the new box culvert installation until the culvert is 100% installed, sections tied and adjacent slopes have been back filled, compacted, fabric and rip-rap protection installed.

TABLE OF RIPRAP AND DRAINAGE FABRIC

Station	L/R	Class **B** Riprap (Ton)	Type **B** Drainage Fabric (SqYd)
4+25 to 5+75	L	349	235
6+75 to 9+25	R	442	307

STORM WATER POLLUTION PREVENTION PLAN CHECKLIST

*(The numbers right of the title headings are **reference numbers** to the GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITIES*

❖ **SITE DESCRIPTION (4.2 1)**

- **Project Limits: See Title Sheet (4.2 1.b)**
- **Project Description: See Title Sheet (4.2 1.a.)**
- **Site Map(s): See Title Sheet and Plans (4.2 1.f. (1)-(6))**
- **Major Soil Disturbing Activities** (check all that apply)
  - ☒ Clearing and grubbing
  - ☒ Excavation/borrow
  - ☒ Grading and shaping
  - ☒ Filling
  - ☒ Cutting and filling
  - ☐ Other (describe):
- **Total Project Area** 17.5 **(4.2 1.b.)**
- **Total Area To Be Disturbed** 17.5 **(4.2 1.b.)**
- **Existing Vegetative Cover (%)** 12.5
- **Soil Properties:** AASHTO Soil or USDA-NRCS Soil Series Classification A-6(7), A-4(3) or CL, ML-CL **(4.2 1. d.)**
- **Name of Receiving Water Body/Bodies** Twelve Mile Creek **(4.2 1.e.)**

❖ **ORDER OF CONSTRUCTION ACTIVITIES (4.2 1.c.)**

(Stabilization measures shall be initiated as soon as possible, but in no case later than 14 days after the construction activity in that portion of the site has temporarily or permanently ceased. Initiation of final or temporary stabilization may exceed the 14-day limit if earth disturbing activities will be resumed within 21 days.)

- **Install perimeter protection where runoff sheets from the site.**
- **Clearing and grubbing.**
- **Install channel and ditch bottom protection.**
- **Remove and store topsoil.**
- **Stabilize disturbed areas.**
- **Install utilities, storm sewers, curb and gutter.**
- **Install inlet and culvert protection after completing storm drainage and other utility installations.**
- **Complete final grading.**
- **Install channel and ditch bottom protection.**
- **Complete final paving.**
- **Reseed areas disturbed by removal activities**.

❖ **EROSION AND SEDIMENT CONTROLS (4.2 2.a.(1)(a)-(f))**

(Check all that apply)

- **Stabilization Practices (See Detail Plan Sheets)**
  - ☐ Temporary Seeding (Cover Crop Seeding)
  - ☒ Permanent Seeding
  - ☐ Sodding
  - ☐ Planting (Woody Vegetation for Soil Stabilization)
  - ☒ Mulching (Grass Hay or Straw)
  - ☐ Hydraulic Mulch (Wood Fiber Mulch)
  - ☐ Soil Stabilizer
  - ☐ Bonded Fiber Matrix
  - ☒ Erosion Control Blankets or Mats
  - ☐ Vegetation Buffer Strips
  - ☐ Roughened Surface (e.g. tracking)
  - ☐ Dust Control
  - ☐ Other:

- **Structural Temporary Erosion and Sediment Controls**
  - ☒ Silt Fence
  - ☐ Floating Silt Curtain
  - ☐ Straw Bale Check
  - ☐ Temporary Berm
  - ☐ Temporary Slope Drain
  - ☒ Straw Wattles or Rolls
  - ☐ Turf Reinforcement Mat
  - ☒ Rip Rap
  - ☐ Gabions
  - ☐ Rock Check Dams
  - ☐ Sediment Traps/Basins
  - ☐ Inlet Protection
  - ☐ Outlet Protection
  - ☐ Surface Inlet Protection (Area Drain)
  - ☐ Curb Inlet Protection
  - ☐ Stabilized Construction Entrances
  - ☐ Entrance/Exit Equipment Tire Wash
  - ☐ Interceptor Ditch
  - ☐ Concrete Washout Area
  - ☐ Temporary Diversion Channel
  - ☐ Work Platform
  - ☐ Temporary Water Barrier
  - ☐ Temporary Water Crossing
  - ☐ Other:

- **Wetland Avoidance**

  Will construction and/or erosion and sediment controls impinge on regulated wetlands? Yes ☒ No ☐ If yes, the structural and erosion and sediment controls have been included in the total project wetland impacts and have been included in the 404 permit process with the USACE.

- **Storm Water Management (4.2 2.b., (1) and (2))**

  Storm water management will be handled by temporary controls outlined in "EROSION AND SEDIMENT CONTROLS" above, and any permanent controls needed to meet permanent storm water management needs in the post construction period. Permanent controls will be shown on the plans and noted as permanent.

- **Other Storm Water Controls (4.2 2.c., (1) and (2))**
  - **Waste Disposal**

    All liquid waste materials will be collected and stored in sealed metal containers approved by the project engineer. All trash and construction debris from the site will be deposited in the approved containers. Containers will be serviced as necessary, and the trash will be hauled to an approved disposal site or licensed landfill. All onsite personnel will be instructed in the proper procedures for waste disposal, and notices stating proper practices will be posted in the field office. The general contractor's representative responsible for the conduct of work on the site will be responsible for seeing waste disposal procedures are followed.
  - **Hazardous Waste**

    All hazardous waste materials will be disposed of in a manner specified by local or state regulations or by the manufacturer. Site personnel will be instructed in these practices, and the individual designated as the contractor's on-site representative will be responsible for seeing that these practices are followed.
  - **Sanitary Waste**

    Portable sanitary facilities will be provided on all construction sites. Sanitary waste will be collected from the portable units in a timely manner by a licensed waste management contractor or as required by any local regulations.

❖ **Maintenance and Inspection (4.2 3. and 4.2 4.)**

- **Maintenance and Inspection Practices**
  - Inspections will be conducted at least one time per week and after a storm event of 0.50 inches or greater.
  - All controls will be maintained in good working order. Necessary repairs will be initiated within 24 hours of the site inspection report.
  - Silt fence will be inspected for depth of sediment and for tears in order to ensure the fabric is securely attached to the posts and that the posts are well anchored. Sediment buildup will be removed from the silt fence when it reaches $^1/_3$ of the height of the silt fence.
  - Sediment basins and traps will be checked. Sediment will be removed when depth reaches approximately 50 percent of the structure's capacity, and at the conclusion of the construction.
  - Check dams will be inspected for stability. Sediment will be removed when depth reaches ½ the height of the dam.
  - All seeded areas will be checked for bare spots, washouts, and vigorous growth free of significant weed infestations.
  - Inspection and maintenance reports will be prepared on form DOT 298 for each site inspection, this form will also be used to document changes to the SWPPP. A copy of the completed inspection form will be filed with the SWPPP documents.
  - The SDDOT Project Engineer and contractor's site superintendent are responsible for inspections. Maintenance, repair activities are the responsibility of the contractor. The SDDOT Project Engineer will complete the inspection and maintenance reports and distribute copies per the distribution instructions on DOT 298.

❖ **Non-Storm Water Discharges (3.0)**

The following non-storm water discharges are anticipated during the course of this project (check all that apply).

- ☐ Discharges from water line flushing.
- ☐ Pavement wash-water, where no spills or leaks of toxic or hazardous materials have occurred.
- ☐ Uncontaminated ground water associated with dewatering activities.

EROSION CONTROL NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	15	65

❖ **Materials Inventory (4.2. 2.c.(2))**

The following materials or substances are expected to be present on the site during the construction period. These materials will be handled as noted under the headings "EROSION AND SEDIMENT CONTROLS" and "SPILL PREVENTION" (check all that apply).

- ☒ Concrete and Portland Cement
- ☐ Detergents
- ☒ Paints
- ☐ Metals
- ☒ Bituminous Materials
- ☒ Petroleum Based Products
- ☐ Cleaning Solvents
- ☐ Wood
- ☐ Cure
- ☐ Texture
- ☐ Chemical Fertilizers
- ☐ Other:

❖ **Spill Prevention (4.2 2.c.(2))**

➢ **Material Management**

▪ Housekeeping

- Only needed products will be stored on-site by the contractor.
- Except for bulk materials the contractor will store all materials under cover and in appropriate containers.
- Products must be stored in original containers and labeled.
- Material mixing will be conducted in accordance with the manufacturer's recommendations.
- When possible, all products will be completely used before properly disposing of the container off site.
- The manufacturer's directions for disposal of materials and containers will be followed.
- The contractor's site superintendent will inspect materials storage areas regularly to ensure proper use and disposal.
- Dust generated will be controlled in an environmentally safe manner.
- Vegetation areas not essential to the construction project will be preserved and maintained as noted on the plans.

▪ Hazardous Materials

- Products will be kept in original containers unless the container is not resealable.
- Original labels and material safety data sheets will be retained in a safe place to relay important product information.
- If surplus product must be disposed of, manufacturer's label directions for disposal will be followed.
- Maintenance and repair of all equipment and vehicles involving oil changes, hydraulic system drain down, de-greasing operations, fuel tank drain down and removal, and other activities which may result in the accidental release of contaminants will be conducted on an impervious surface and under cover during wet weather to prevent the release of contaminants onto the ground.
- Wheel wash water will be collected and allowed to settle out suspended solids prior to discharge. Wheel wash water will not be discharged directly into any storm water system or storm water treatment system.
- Potential pH-modifying materials such as: bulk cement, cement kiln dust, fly ash, new concrete washings, concrete pumping, residuals from concrete saw cutting (either wet or dry), and mixer washout waters will be collected on site and managed to prevent contamination of storm water runoff.

➢ **Product Specific Practices (6.8)**

▪ Petroleum Products
All on-site vehicles will be monitored for leaks and receive regular preventive maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled.

▪ Fertilizers
Fertilizers will be applied only in the amounts specified by the SDDOT. Once applied, fertilizers will be worked into the soil to limit the exposure to storm water. Fertilizers will be stored in an enclosed area. The contents of partially used fertilizer bags will be transferred to sealable containers to avoid spills.

▪ Paints
All containers will be tightly sealed and stored when not required for use. The excess will be disposed of according to the manufacturer's instructions and any applicable state and local regulations.

▪ Concrete Trucks
Contractors will provide designated truck washout areas on the site. These areas must be self contained and not connected to any storm water outlet of the site. Upon completion of construction washout areas will be properly stabilized.

➢ **Spill Control Practices (4.2 2 c.(2))**

In addition to the previous housekeeping and management practices, the following practices will be followed for spill prevention and cleanup if needed.

- For all hazardous materials stored on site, the manufacturer's recommended methods for spill clean up will be clearly posted. Site personnel will be made aware of the procedures and the locations of the information and cleanup supplies.
- Appropriate cleanup materials and equipment will be maintained by the contractor in the materials storage area on-site. As appropriate, equipment and materials may include items such as brooms, dust pans, mops, rags, gloves, goggles, kitty litter, sand, sawdust, and plastic and metal trash containers specifically for clean up purposes.
- All spills will be cleaned immediately after discovery and the materials disposed of properly.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.
- After a spill a report will be prepared describing the spill, what caused it, and the cleanup measures taken. The spill prevention plan will be adjusted to include measures to prevent this type of spill from reoccurring, as well as clean up instructions in the event of reoccurrences.
- The contractor's site superintendent, responsible for day-to-day operations, will be the spill prevention and cleanup coordinator. The contractor is responsible for ensuring that the site superintendent has had appropriate training for hazardous materials handling, spill management, and cleanup.

➢ **Spill Response (4.2 2 c.(2))**

The primary objective in responding to a spill is to quickly contain the material(s) and prevent or minimize migration into storm water runoff and conveyance systems. If the release has impacted on-site storm water, it is critical to contain the released materials on-site and prevent their release into receiving waters. If a spill of pollutants threatens storm water or surface water at the site, the spill response procedures outlined below must be implemented in a timely manner to prevent the release of pollutants.

- The contractor's site superintendent will be notified immediately when a spill or the threat of a spill is observed. The superintendent will assess the situation and determine the appropriate response.
- If spills represent an imminent threat of escaping erosion and sediment controls and entering receiving waters, personnel will be directed to respond immediately to contain the release and notify the superintendent after the situation has been stabilized.
- Spill kits containing appropriate materials and equipment for spill response and cleanup will be maintained by the contractor at the site.
- If oil sheen is observed on surface water (e.g. settling ponds, detention ponds, swales), action will be taken immediately to remove the material causing the sheen. The contractor will use appropriate materials to contain and absorb the spill. The source of the oil sheen will also be identified and removed or repaired as necessary to prevent further releases.
- If a spill occurs the superintendent or the superintendent's designee will be responsible for completing the spill reporting form and for reporting the spill to SD DENR.
- Personnel with primary responsibility for spill response and clean up will receive training by the contractor's site superintendent or designee. The training must include identifying the location of the spill kits and other spill response equipment and the use of spill response materials.
- Spill response equipment will be inspected and maintained as necessary to replace any materials used in spill response activities.

EROSION CONTROL NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	16	65

❖ **Spill Notification**

In the event of a spill, the contractor's site superintendent will make the appropriate notification(s), consistent with the following procedures:

- A release or spill of a regulated substance (includes petroleum and petroleum products) must be reported to DENR immediately **if any one of the following** conditions exists:
  - The discharge threatens or is in a position to threaten the waters of the state (surface water or ground water).
  - The discharge causes an immediate danger to human health or safety.
  - The discharge exceeds 25 gallons.
  - The discharge causes a sheen on surface water.
  - The discharge of any substance that exceeds the ground water quality standards of ARSD (Administrative Rules of South Dakota) chapter 74:51:01.
  - The discharge of any substance that exceeds the surface water quality standards of ARSD chapter 74:51:01.
  - The discharge of any substance that harms or threatens to harm wildlife or aquatic life.
  - The discharge of crude oil in field activities under SDCL (South Dakota Codified Laws) chapter 45-9 is greater than 1 barrel (42 gallons).

To report a release or spill, call DENR at 605-773-3296 during regular office hours (8 a.m. to 5 p.m. Central time). To report the release after hours, on weekends or holidays, call State Radio Communications at 605-773-3231. Reporting the release to DENR does not meet any obligation for reporting to other state, local, or federal agencies. Therefore, the responsible person must also contact local authorities to determine the local reporting requirements for releases. DENR recommends that spills also be reported to the National Response Center at (800) 424-8802.

❖ **Construction Changes (4.4)**

When changes are made to the construction project that will require alterations in the temporary erosion controls of the site, the Storm Water Pollution Prevention Plan (SWPPP) will be amended to provide appropriate protection to disturbed areas, all storm water structures, and adjacent waters. The SDDOT Project Engineer will modify the SWPPP plan (DOT 298) and drawings to reflect the needed changes. Copies of changes will be routed per DOT 298. Copies of forms and the SWPPP will be retained in a designated place for review over the course of the project.

❖ **CERTIFICATIONS**

➢ **Certification of Compliance with Federal, State, and Local Regulations**

The Storm Water Pollution Prevention Plan (SWPPP) for this project reflects the requirements of all local municipal jurisdictions for storm water management and sediment and erosion control as established by ordinance, as well as other state and federal requirements for sediment and erosion control plans, permits, notices or documentation as appropriate.

➢ **South Dakota Department of Transportation**

TRAFFIC CONTROL NOTES

STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
	P 6042 (00)	17	65

GENERAL MAINTENANCE OF TRAFFIC

1. Installation of traffic control shall conform to the Manual on Uniform Traffic Control Devices (MUTCD) 2009 Edition unless otherwise modified in the plans.

2. The Contractor shall notify the engineer 7 days prior to start of construction and before any substantial traffic control change so that a press release can be issued. The Contractor shall notify the engineer 48 hours in advance of all other traffic control changes.

   Installation of traffic control shall not be made before 8:30 AM on the day of the closure.

3. Removing, relocating, salvaging, and resetting of existing traffic control devices, including delineation, shall be the responsibility of the Davison County. The Contractor shall notify Rusty Weinberg Davison County Highways (605-995-8625) 72 hours in advance to schedule signs to be removed.

   Additionally, the Contractor shall notify the County 14 calendar days prior to opening to traffic to allow time for installation of permanent signage. The sign installation area must also have final grading completed so the County's one call markings are not disturbed. If the one call markings are disturbed the County will require 7 additional working days to have the one call remarked. If the Contractor fails to notify the County within the specified time period, the Contractor shall be responsible for temporary signage until the permanent signage is installed by the County.

4. Storage of vehicles and equipment shall be outside the clear zone and as near as possible to the right-of-way line. Contractor's employees should mobilize at a location off the right-of-way and arrive at the work sites in a minimum number of vehicles necessary to perform the work.

5. Indiscriminate driving and parking of vehicles within the right-of-way will not be permitted. Any damage to the vegetation, surfacing, embankment, delineators and existing signs resulting from such indiscriminate use shall be repaired and/or restored by the Contractor, at no expense to the County, and to the satisfaction of the Engineer.

6. All breakaway sign supports shall comply with FHWA NCHRP 350 crash-worthy requirements. The Contractor shall provide post installation details at the preconstruction meeting for all steel post breakaway sign support assemblies.

7. Installation, maintenance, relocation and removal of Type I and II barricades, cones, vertical panels, drums, barricade warning lights, watchmen, tubular markers and flags shall be included in the lump sum price bid for "Traffic Control Miscellaneous".

8. The Contractor or designated traffic control subcontractor shall ensure the adequacy, legibility, and reflectivity of each sign and device. Sign washing shall be considered incidental to Traffic Control and required as directed by the Engineer.

9. The Contractor shall provide temporary access routes for residences and businesses located in the construction area unless otherwise noted in the plans. Temporary routes and drives shall be considered incidental to all items of the project and therefore no separate measurement and payment shall be made.

10. Flagger warning signs shall be installed when using flaggers to direct traffic. Flaggers shall wear appropriate safety clothing and shall use a Stop/Slow paddle. Payment for flagging will be at the contract unit price per hour if a bid item has been included. If no bid item is included, flagging shall be incidental to "Traffic Control, Miscellaneous".

TRAFFIC DETOUR

A 3-mile detour will be required during construction and shall be installed according to these plans and the traffic diversion shall be constructed according to Section 4.4.A. of the Standard Specifications. Maintenance (occasional blading and retrieval) of the 3 mile detour will be the Contractor's responsibility during construction which will be paid for as the lump sum bid item "Maintenance of Traffic Diversion". Davison County will provide and deliver all new on detour route gravel surfacing as needed. Serious road defects within the detour shall be brought to the Engineer's attention immediately. All traffic accidents on detour and within project area shall be immediately reported to the local authorities or by dialing 911.

For bidding purposes, contractor shall assume one full maintenance operation will be required during construction.

Detour shall be kept in good working condition and free of construction debris. Flashing beacons on traffic control signs should be inspected daily to ensure proper functioning throughout the night.

Installation and removal of the traffic diversion shall meet all requirements as set forth in the South Dakota Surface Water Quality Standards. As the detour route is over existing county and township roads, no impacts to water quality are expected.

Adjacent landowners will require access into their fields during construction. The contractor shall coordinate with adjacent landowners and shall make reasonable accommodations to provide access into their fields.

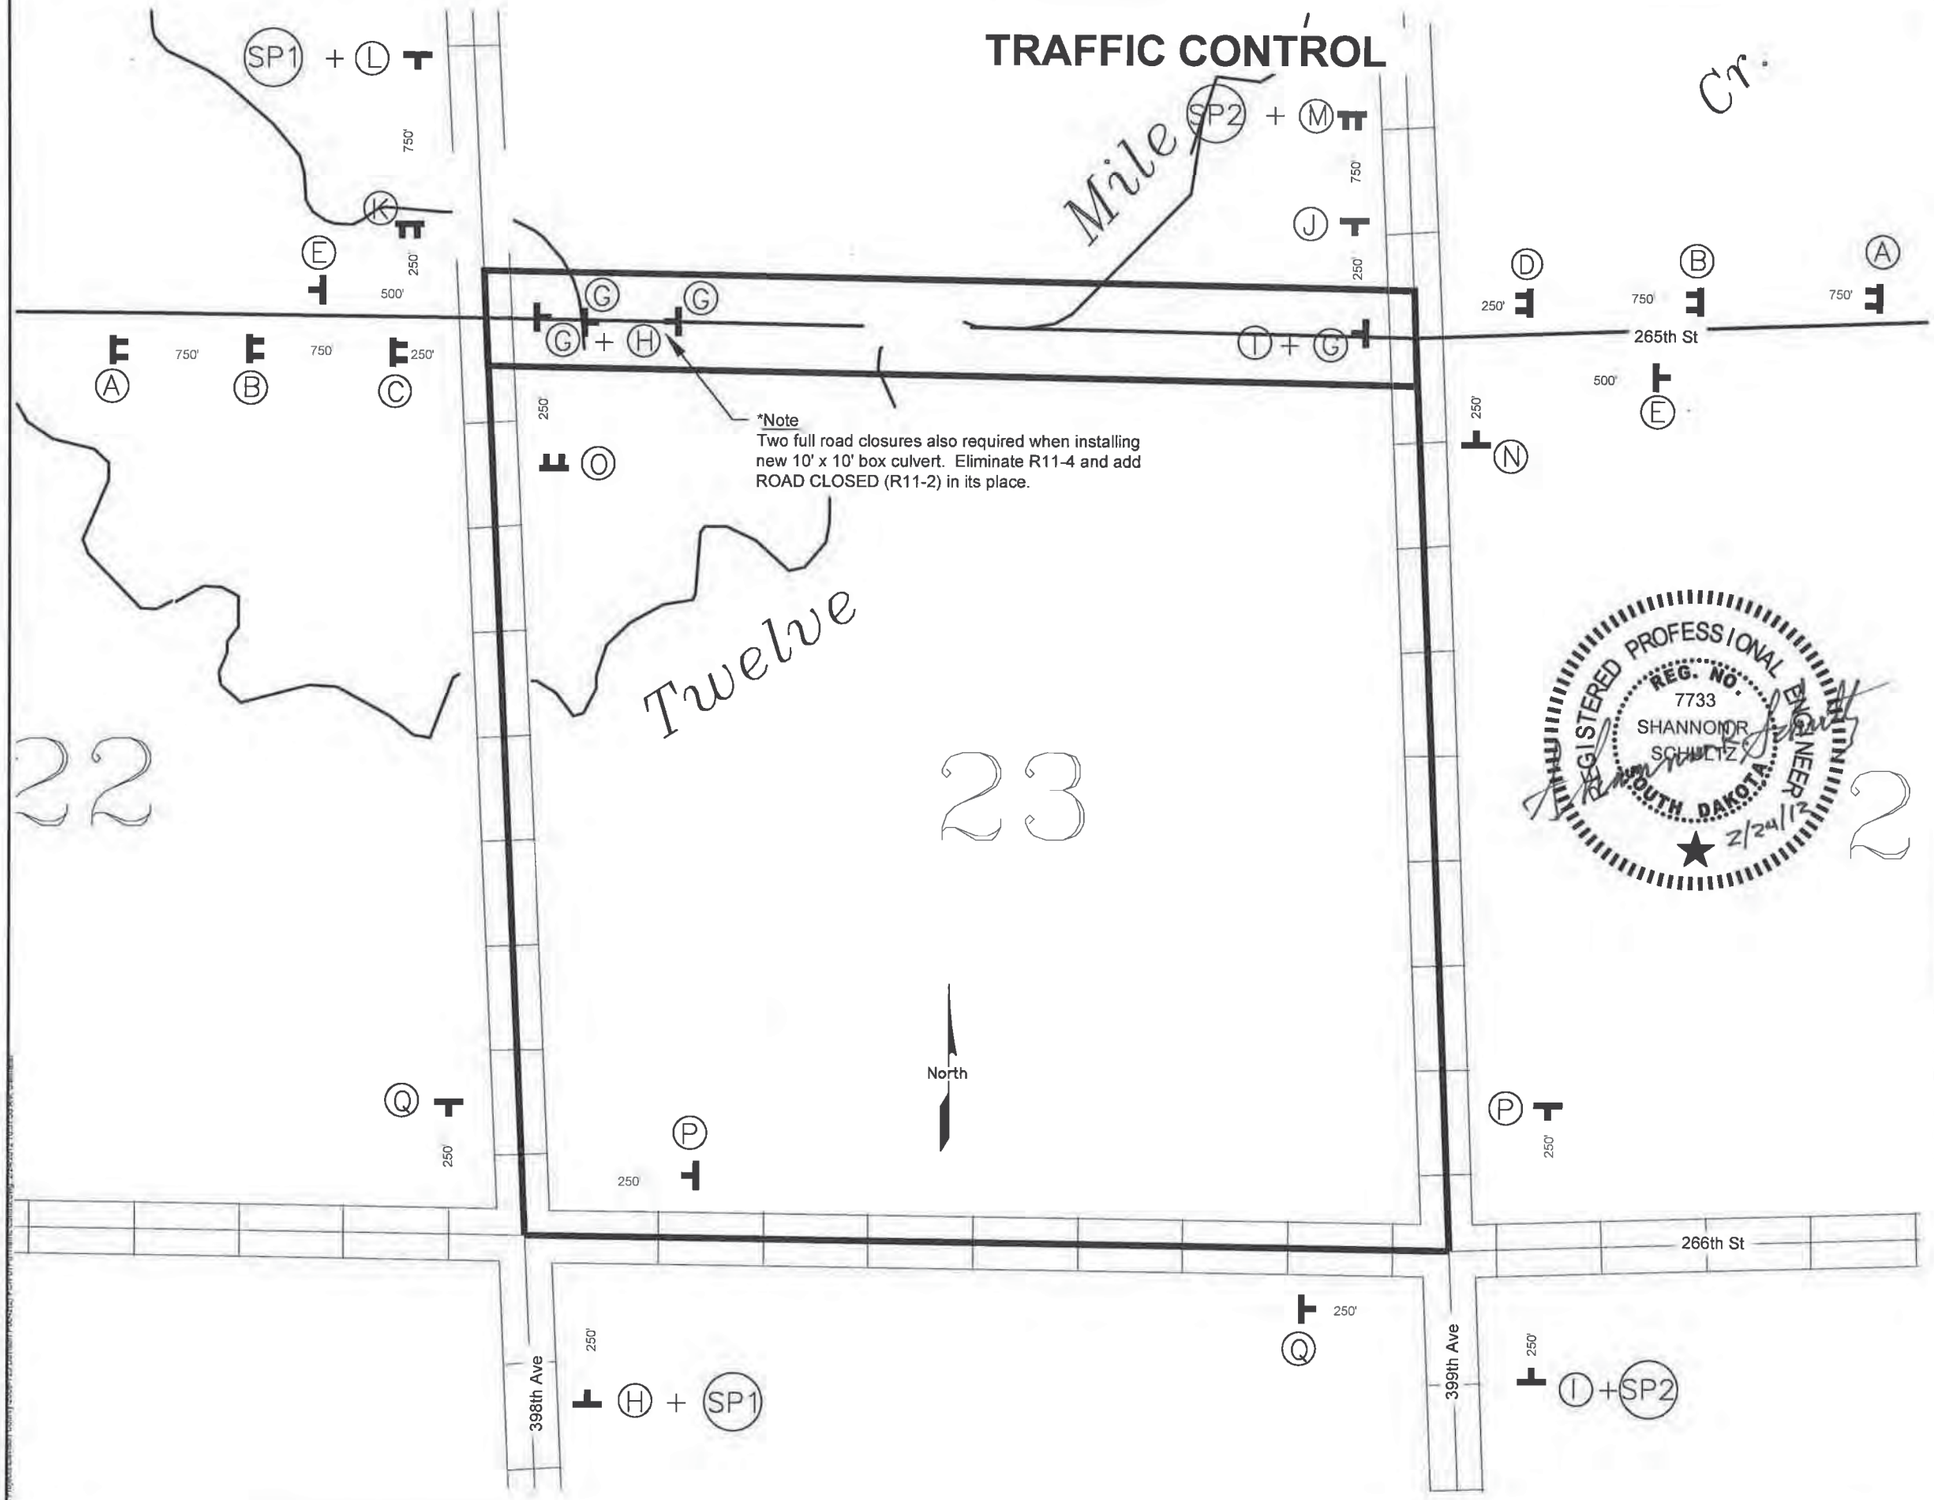
TRAFFIC CONTROL



Legend

Sign Location

Project Limits

Detour Route

NOTES:

All Ground Mounted Support signs shall remain in place until all construction is complete.

Posts used for the mounting of construction signs shall yield upon impact to minimize hazards to motorists.

If a two–part post assembly is used, the connection must conform to FHWA breakaway sign support requirements.

Construction signs shall not block the view of existing signs.

Spacing of Fixed Location Signs Shall be as follows:

Suggested Advance Warning Sign Spacing

Road Type	*Distance Between Signs***		
	A	*B*	*C*
Urban (low speed)*	*30 (100)*	*30 (100)*	*30 (100)*
Urban (high speed)*	*100 (350)*	*100 (350)*	*100 (350)*
Rural	*150 (500)*	*150 (500)*	*150 (500)*
Expressway/Freeway	*300 (1,000)*	*450 (1,500)*	*800 (2,640)*

*Speed category to be determined by highway agency.

**Distances are shown in meters (feet). The A dimension is the distance from the transition or point of restriction to the first sign. The B dimension is the distance between the first and second signs. The C dimension is the distance between the second and third signs. (The third sign is the first one in a three–sign series encountered by a driver approaching a temporary traffic control zone).

EROSION CONTROL

Erosion Control Wattle (10' Each)

High Flow Silt Fence

Class B Rip Rap

Type 3 Erosion Control Blanket

Sta 0+00-33' to 0+00-17'R
Install 30' of High Flow Silt Fence as inlet protection for culvert

Sta 1+84 to 7+58 L
Install 617' of High Flow Silt Fence

CH-CH #1
Sta 4+25-75'L to Sta 5+75-67'L
Install 235 SyYd Type B Drainage Fabric
Install 349 Tons Class B Riprap

Sta 4+46 to Sta 5+54 L
Install 123 SqYd Type III Erosion Control Blanket

Sta. 6+52 to 7+92 R
Install175' of High Flow Silt Fence

Sta. 7+00 to Sta. 9+00 LEFT
Do not disturb archaeological site 39DV55

Sta. 6+51 to 8+07 R
Install 260 SqYd of Type III Erosion Control Blanket

Sta 6+75 to Sta 7+55 L
Install 128 SqYd Type III Erosion Control Blanket

Sta 7+11 to Sta 7+77 R
Install 67' of High Flow Silt Fence

Sta. 7+66 to Sta 9+27 L
Install 268 Sqyd Type III Erosion Control Blanket

6+75 to 9+25L
Install 278 SqYd Class B Drainage Fabric
Install 400 Tons Class B Riprap

Sta. 7+74 to 7+80 L
Install 75' of High Flow Silt Fence

Sta. 8+12 to 9+99 R
Install 214' of High Flow Silt Fence

Sta. 8+18 to Sta. 9+49 R
Install 218 Sqyd Type III Erosion Control Blanket

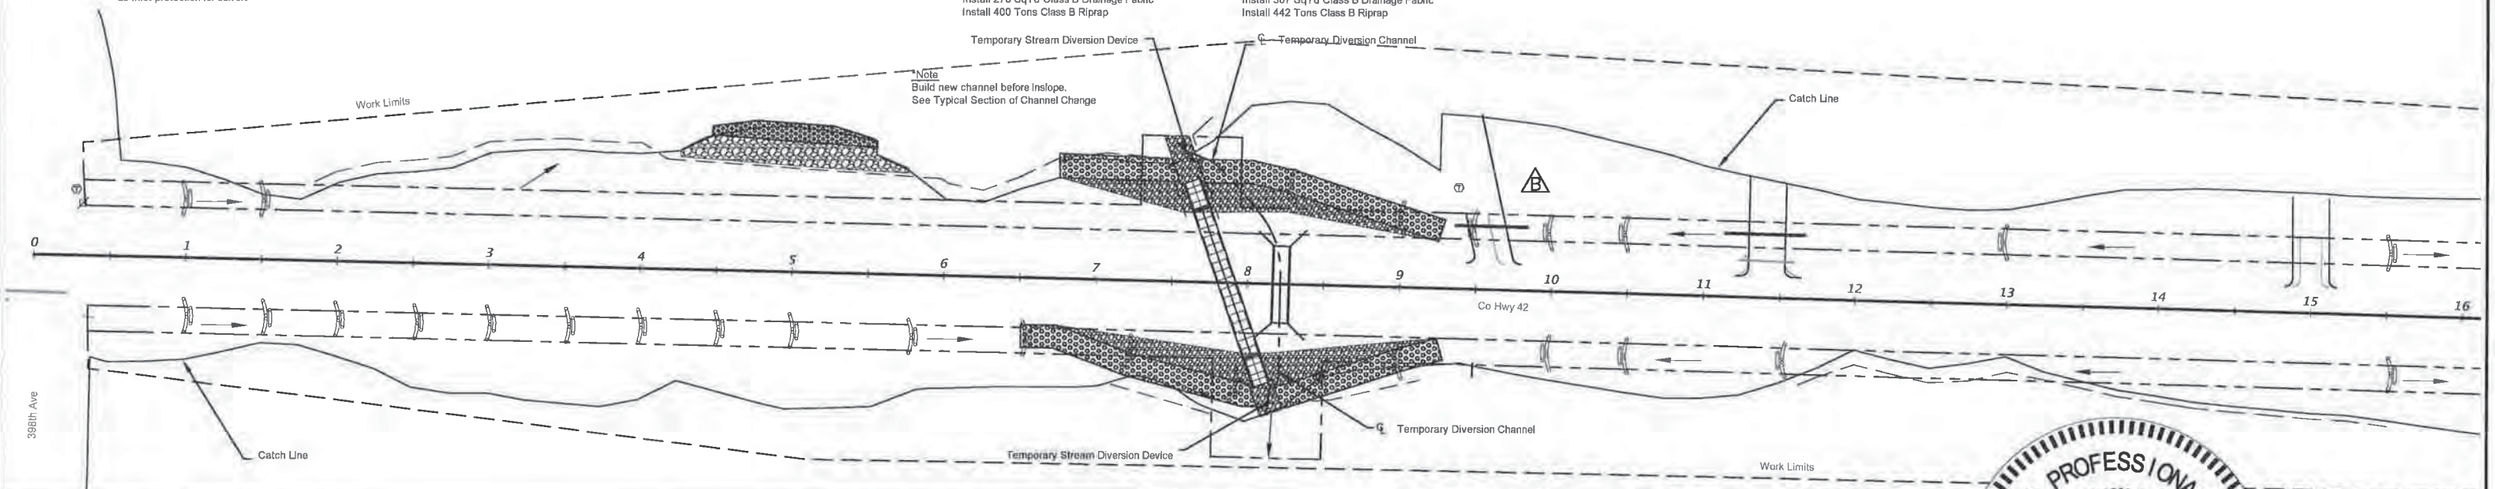
Sta 8+26 to Sta 9+14 R
Install 90' of High Flow Silt Fence

6+75 to 9+25R
Install 307 SqYd Class B Drainage Fabric
Install 442 Tons Class B Riprap

Sta 7+43-96' to 7+73-60'L
Install 59 SqYd Type B Drainage Fabric
Install 85 Tons Type B Riprap

Sta. 8+00-60' to 8+25-83'R
Install 39 SqYd Type B Drainage Fabric
Install 56 Tons Type B Riprap

Sta 11+63 to 15+53 R
Install 396' of High Flow Silt Fence



Sta 21+26 to 23+50R
Install 322 SqYd of Type B Drainage Fabric
Install 464 Tons Class B Riprap

Sta 22+00 to 23+50R
Install 153 SqYd of Type B Drainage Fabric
Install 220 Tons Class B Riprap

Sta 21+25 to 22+86 L
Install 284 SqYd of Type III Erosion Control Blanket

Sta 21+72 to 22+13 R
Install 82' of High Flow Silt Fence

Sta 23+17 to 23+54 L
Install 57 SqYd of Type III Erosion Control Blanket

Sta 22+19 to 23+53 R
Install 220 SqYd of Type III Erosion Control Blanket

Sta 22+52 to 34+98 R
Install 1,042' of High Flow Silt Fence

Sta 22+93 to 35+26 L
Install 1,268' of High Flow Silt Fence

28+55-74'L to 33+25-89'L
CH-CH #2

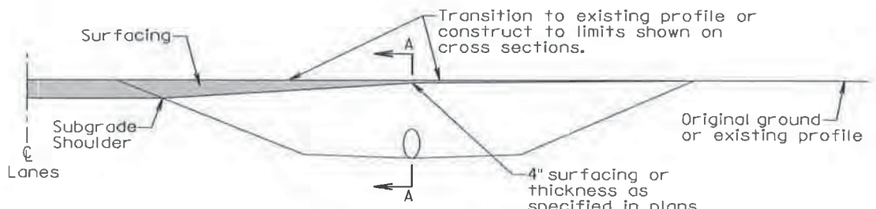
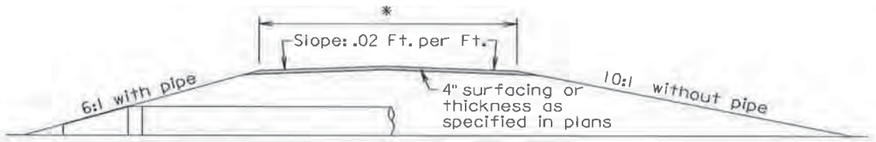
PERSPECTIVE OF ENTRANCE



ELEVATION VIEW (ENTRANCE)



SECTION A-A (ENTRANCE)

*The finished surfacing width is stated elsewhere in the plans. The subgrade width is 4' wider than the finished surfacing width unless stated otherwise in the plans.

GENERAL NOTES:

The ditch section shown above in the perspective and elevation view is only for illustrative purposes.

A 6:1 inslope shall be constructed for an entrance when a pipe is required. A 10:1 inslope shall be constructed when a pipe is not required.

Pipe lengths shall be adjusted if necessary during construction to obtain the 6:1 slopes. For grading projects, the pipe lengths are estimated typically using a 4" thickness of surfacing directly over the subgrade above the pipe.

The transition area between the mainline inslope and the approach inslope for entrances shall be rounded to eliminate an abrupt transition.

For entrances other than intersecting roads, the radii shall be 15' unless stated otherwise in the plans.

The turning radii shall be 35' for intersecting roads unless stated otherwise in the plans.

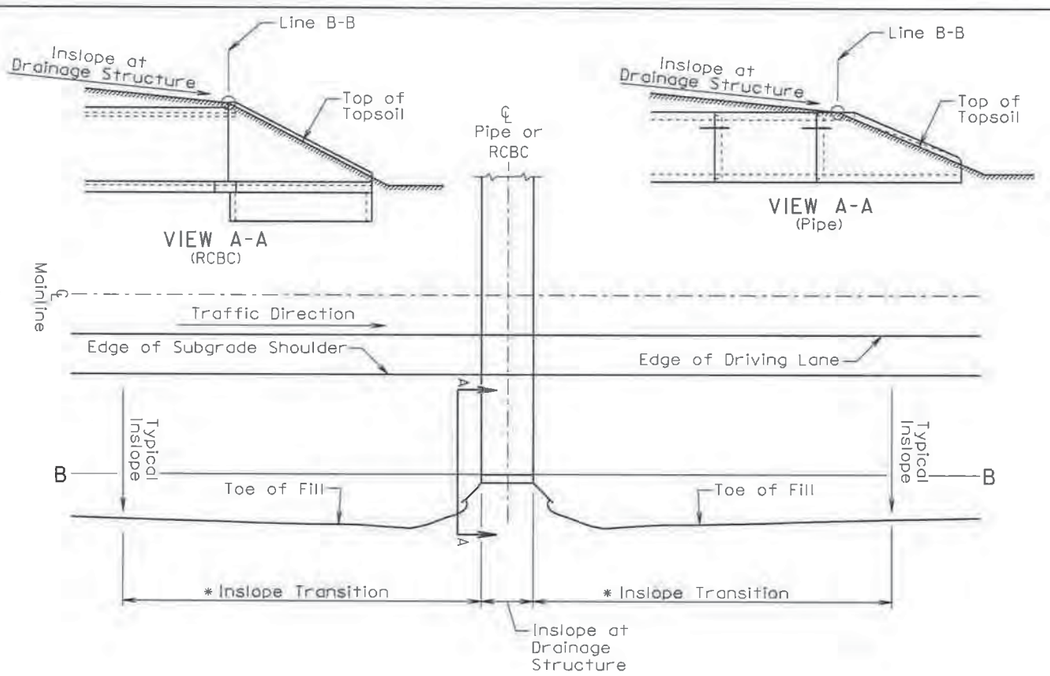
INSLOPE TRANSITIONS AT PIPE CULVERTS OR REINFORCED CONCRETE BOX CULVERTS

PLATE NUMBER 120.05

Sheet 1 of 2

February 14, 2011



TYPE 1 INSLOPE TRANSITION

GENERAL NOTES:

This Type 1 Inslope Transition is used when the specified inslope at the drainage structure is flatter than the typical inslope and the inslope at the drainage structure is between a 4:1 slope and 6:1 slope.

Line B-B represents the clear zone line, the location where soil intercepts the parapet on an RCBC, the location where the soil intercepts the top of the pipe adjacent to the opening of the pipe end section, or may represent a change in slope.

* Transition from the typical inslope to the inslope at the drainage structure. Within the clear zone (area from edge of subgrade shoulder to line B-B) use 100' length for each 1:1 slope change. Example: transition from a 4:1 to a 6:1 would require a 200' length transition. The typical inslope outside of the clear zone shall be transitioned gradually to the slope necessary adjacent to the RCBC wing wall or pipe culvert end section within the transition length necessary for the transition within the clear zone.

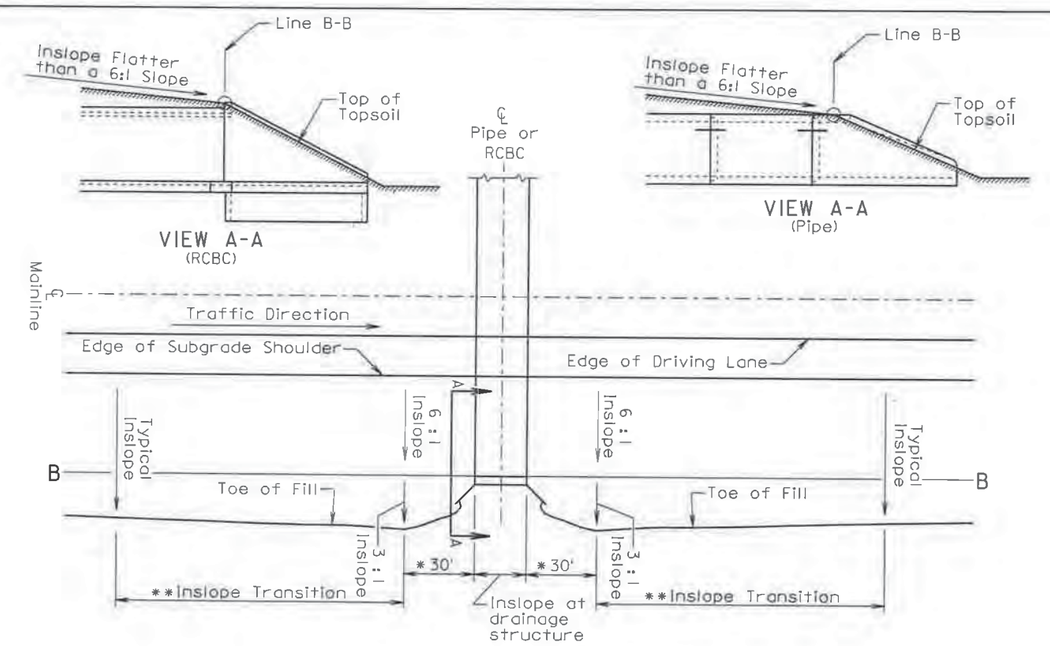
INSLOPE TRANSITIONS AT PIPE CULVERTS OR REINFORCED CONCRETE BOX CULVERTS

PLATE NUMBER 120.05

Sheet 2 of 2

February 14, 2011



TYPE 2 INSLOPE TRANSITION

GENERAL NOTES:

This Type 2 Inslope Transition is used when the specified inslope at the pipe or RCBC is flatter than a 6:1 slope.

Line B-B represents the clear zone line, the location where soil intercepts the parapet on an RCBC, the location where the soil intercepts the top of the pipe adjacent to the opening of the pipe end section, or may represent a change in slope.

* Transition from inslope at drainage structure to a 6 : 1 inslope and 3:1 inslope.

** Transition from typical inslope to the inslopes adjacent to the drainage structure. Within the clear zone (area from edge of subgrade shoulder to line B-B) use 100' length for each 1:1 slope change. Example: transition from a 4:1 to a 6:1 would require a 200' length transition. The typical inslope outside of the clear zone shall be transitioned to a 3:1 inslope within the transition length necessary for the transition within the clear zone.

GENERAL NOTES:

Safety bars shall be attached to safety ends over 24" in diameter only.

Safety ends shall be fabricated from galvanized steel conforming to the requirements of the Standard Specifications.

Safety bars shall be fabricated from steel pipe conforming to the requirements of ASTM A-53 Schedule 40 Specifications.

Slotted holes for safety bar attachment shall be provided for all end sections.

Attachment to circular pipes 15" through 24" diameter shall be made with Type #1 straps. All other sizes shall be attached with Type #2 rods and lugs.

When stated in the plans, optional toe plate extension shall be punched and bolted to end section apron lip with ⅜" diameter galvanized bolts. Steel for toe plate extension shall be same gauge as end section. Dimensions shall be overall width less 6" by 8" high.

Installation shall be performed in accordance with the Standard Specifications.

All work and materials required for fabrication and installation of safety ends shall be incidental to the bid items for the various sizes of safety ends.

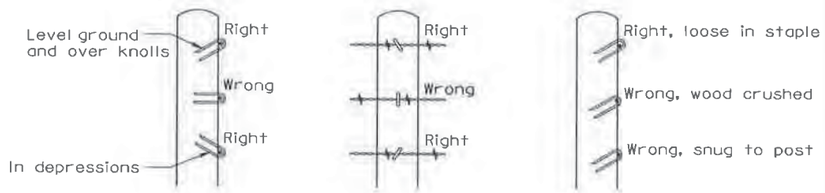
PLATE NUMBER 620.01

Sheet 1 of 1



Staples shall not be driven parallel to side of post

Wire shall be loose in staple

STAPLE INSTALLATION

GENERAL NOTES:

The Right-of-Way fence shall consist of barbed wire or a combination of woven wire and barbed wire. The barbed wire and/or woven wire shall be fastened to all wood posts or fastened to alternating wood and steel posts. Only wood posts shall be used for brace panels. Gates shall be of the type designated in the plans or as otherwise directed by the Engineer. Fence shall be constructed conforming to the details on the standard plates and in the plans unless otherwise directed by the Engineer.

Right-of-Way fence on Interstate Projects shall be constructed one foot within the Interstate Right-of-Way lines except at bridge openings, cattle passes, and as otherwise directed by the Engineer.

Right-of-Way fence other than on Interstate Projects shall be constructed within one foot of the Right-of-Way on the Landowner's side except at bridge openings, cattle passes, and as otherwise directed by the Engineer.

Barbs shall be fabricated from zinc coated 14 ga. wire. Two point barbs shall be wrapped twice around one main strand at 4" spacings and the four point barbs shall be interlocked and wrapped around both main strands at 5" spacings.

The gages of wire and wood post lengths and sizes are the minimum acceptable unless otherwise specified in the plans. The tolerances for steel posts shall be as stated in AASHTO M281. Woven wire shall conform to design and specifications of ASTM A116 and barbed wire shall conform to ASTM A121.

DETAIL B

GENERAL NOTES:

Two Post Panels shall be installed at least every 1320' between corners.

Two Post Panels shall be installed at any sharp vertical angle crest points and as directed by the Engineer.

Horizontal wood braces shall consist of 4" dia. x 8' wood posts or rough 4" x 4" x 8' timbers.

Diagonal brace wires shall be fabricated with 4 strands of 9 Ga. galvanized wire twisted tight. The diagonal brace wires shall be installed in accordance with the direction of the fence pull. Two diagonal brace wires are required if fence pull is in both directions.

PIPE END DETAIL

GENERAL NOTES:

Prior to placement of the erosion control blanket, the areas shall be properly prepared, shaped, seeded, and fertilized.

Erosion control blanket shall be unrolled in the direction of the flow of water when placed in ditches and on slopes. The upslope end of the erosion control blanket shall be buried in a trench 6" wide by 6" deep. There shall be at least a 6" overlap wherever one roll of erosion control blanket ends and another begins, with the upslope erosion control blanket placed on top of the downslope erosion control blanket.

The erosion control blanket shall be pinned to the ground according to the manufacturer's installation recommendations.

After the placement of the erosion control blanket, the Contractor shall fine grade along all edges of the blanket to maintain a uniform slope adjacent to the blanket and level any low spots which might prevent uniform and unrestricted flow of side drainage directly onto the erosion control blanket.

All ditch sections shall be shaped when installing the erosion control blanket. All costs for shaping the ditches shall be incidental to the contract unit price per foot for "Shaping for Erosion Control Blanket".

EROSION BALE INSTALLATION
(This Ditch Section and Erosion Bale Installation Typically Used in Black Hills)

GENERAL NOTES:

The erosion bale sediment barrier must be entrenched and backfilled. A trench should be excavated the width of a bale and the length of the proposed sediment barrier to a minimum depth of 4 inches. After the bales are staked with rebar or wood stakes, the excavated soil must be backfilled against the sediment barrier. The sediment barrier must be extended to such a length that the bottoms of the end bales are higher in elevation than the top of the lowest middle bale.

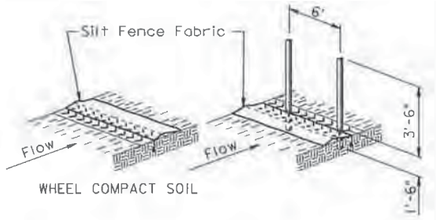
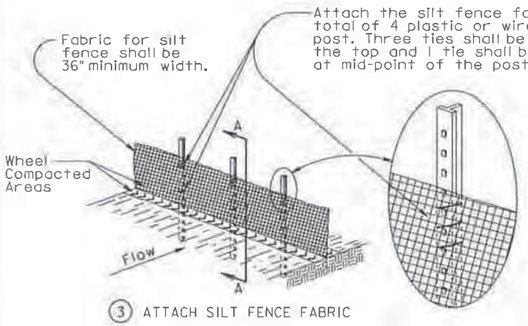
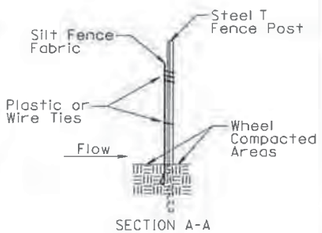
(1) INSTALL SILT FENCE FABRIC BY MACHINE SLICING METHOD.



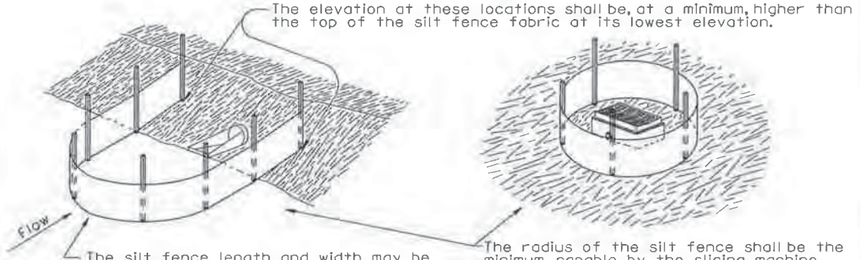
(2) WHEEL COMPACT SOIL ABOVE SLICED IN PORTION OF FABRIC AND THEN DRIVE STEEL T FENCE POSTS.



(3) ATTACH SILT FENCE FABRIC



SECTION A-A



GENERAL NOTE:

If a trench can not be dug or the silt fence fabric can not be sliced in due to the type of earthen material (such as rock), then a row of 30 to 40 pound sandbags butted end to end shall be provided on top of the extra length of silt fence fabric to prevent underflow.

SECTION A-A

December 23, 2004

Published Date: 1st Qtr. 2012	SDDOT	EROSION CONTROL WATTLE	PLATE NUMBER 734.06
			Sheet 1 of 2

GENERAL NOTES:

At cut or fill slope installations, wattles shall be installed along the contour and perpendicular to the water flow.

At ditch installations, point A must be higher than point B to ensure that water flows over the wattle and not around the ends.

The Contractor shall dig a 3" to 5" trench, install the wattle tightly in the trench so that daylight can not be seen under the wattle, and then compact the soil excavated from the trench against the wattle on the uphill side. See Detail B.

The stakes shall be 1"x2" or 2"x2" wood stakes, however, other types of stakes such as rebar may be used only if approved by the Engineer. The stakes shall be placed 6" from the ends of the wattles and the spacing of the stakes along the wattles shall be 3' to 4'.

Where installing running lengths of wattles, the Contractor shall butt the second wattle tightly against the first and shall not overlap the ends. See Detail C.

The Contractor and Engineer shall inspect the erosion control wattles once every week and within 24 hours after every rainfall event greater than ½". The Contractor shall remove, dispose, or reshape the accumulated sediment when necessary as determined by the Engineer.

Sediment removal, disposal, or necessary shaping shall be as directed by the Engineer. All costs for removing accumulated sediment, disposal of sediment, and necessary shaping shall be incidental to the contract unit price per cubic yard for "Remove Sediment".

All costs for furnishing and installing the erosion control wattles including labor, equipment, and materials shall be incidental to the contract unit price per foot for the corresponding erosion control wattle bid item.

All costs for removing the erosion control wattle from the project including labor, equipment, and materials shall be incidental to the contract unit price per foot for "Remove Erosion Control Wattle".

SECTION A-A

TEMPORARY DIVERSION CHANNEL

GENERAL NOTES:

A temporary diversion channel and/or pipe(s) shall be used to divert stream or drainage away from a construction area to provide a dry work area for construction. The diversion of streams and waterways is intended to protect the streams and waterways from various construction contaminants and sediment. Disturbing the existing stream channel and riparian zone should be minimized. Equipment shall not cross through the stream outside of the work area.

Sizing of the temporary diversion channel and/or pipe(s) shall be the Contractor's responsibility.

The method and materials used to construct the stream diversion device shall be the Contractor's responsibility, however, earthen berms are not acceptable since their removal causes siltation problems.

The Contractor shall restore the original channel bottom to its original condition prior to returning any flows. Upon completion of the new permanent drainage structure, the temporary stream diversion block or device shall be removed in a manner that will not cause violation of water quality standards. The temporary diversion channel shall then be backfilled and any pipe(s) (if used) shall be removed. The entire work area shall be cleaned and restored to smooth/even contours.

All costs for labor, equipment, materials and incidentals as indicated on this sheet to complete a satisfactory Temporary Diversion Channel/and or Pipe(s) shall be incidental to the contract unit price per each for "Temporary Diversion Channel and/or Pipe(s)". "Temporary Diversion Channel and/or Pipe(s)" will be paid for once per structure site regardless or the number of times water is diverted at the individual site.

STRUCTURE

SPECIFICATIONS
Use South Dakota Standard Specifications for Roads and Bridges, 2004 Edition and Required Provisions, Supplemental Specifications and/or Special Provisions as included in the Proposal.

GENERAL NOTES
Design shall be in accordance with Section 560 of the South Dakota Standard Specifications with the following criteria:

1. Box culvert and box culvert end section design shall conform to the AASHTO LRFD Bridge Design Specifications, 2010 Edition.

2. Design Live Load: HL-93. No construction loading in excess of legal load is anticipated. If construction loading in excess of legal load is anticipated by the Contractor, the Contractor shall submit a proposal including a design analysis for the anticipated construction loading, through the proper channels, to the Office of Bridge Design for approval. Upon approval, the construction load shall not be applied until the depth of fill over the box culvert as required by analysis has been placed. At a minimum, 4 ft. of fill shall be placed over the box culvert prior to applying the construction load. All costs associated with accommodating any construction loads shall be borne by the Contractor.

3 The design of the barrel sections shall be based on a minimum fill height of 2 feet and include all subsequent fill heights up to and including the maximum fill height over the box culvert of 15 feet.

4. Minimum inside corner fillet shall be 6 in.

5. Minimum precast barrel section length shall be 4 ft.

6. Lift holes shall be plugged with an approved non-shrinkable grout.

7. The Fabricator shall imprint on the structure the date of construction as specified and detailed on Standard Plate No. 460.02.

8. Installation of the precast sections shall be in accordance with the final approved shop plans.

DESIGN MIX OF CONCRETE

1. Mix shall be as per fabricator's design, however minimum compressive strength shall not be less than 4500 p.s i. at 28 days.

2. Type II cement is required

SHOP PLANS

1. The fabricator shall initially submit 3 copies of the shop plans to Civil Design Inc, located at 609 Main Avenue South, Brookings, SD 57006 for review

2. After review by Civil Design Inc, one copy with any revisions noted will be sent to both the Office of Bridge Design and the Fabricator. The Fabricator shall then send seven corrected copies back to Civil Design Inc.

3. After review by Civil Design Inc, six copies will be sent back to the Bridge Construction Engineer, South Dakota Department of Transportation, who will review them, arrange for fabrication inspection, authorize fabrication, and distribute the shop drawings

YEAR PLATE DETAILS

NOTES:

1. Year plates of the general dimensions shown shall be constructed on all box culverts and bridges. The year plates shall be constructed in reverse and attached to the forms in such a manner that the finished imprint in the concrete does not exceed one-half (½) inch in depth.

2. Year plates shall be located on structure (s) as follows:

   a. On cast-in-place box culverts the year plates shall be four and one - half (4 ½) inches below the top of the upstream parapet wall and centered laterally on the upstream face. On precast box culverts the year plate shall be centered laterally on the upstream face of the top slab. Where an extended interior wall interferes with this location, the year plate shall be centered in an adjacent barrel.

   b. On bridges with six (6) inch curbs or "Jersey" shaped barriers with no endblocks, the year plate shall be centered vertically on the curb face approximately six (6) inches from the end of the bridge, or as designated by the Engineer. On bridges with "Jersey" shaped barrier endblocks, the year plate shall be centered on the upper sloped portion of the barrier approximately 5'- 6" from the end of the bridge, or as designated by the Engineer. There shall be one year plate at each end of the bridge on opposite sides.

   c. When the plans specify that both the original date of construction and the date of reconstruction are to be shown, one date shall be placed as listed above and the other located adjacent to it. Both year plates shall be shown at each end of the bridge on opposite sides.

3. There will be no separate measurement or payment made for year plates on box culverts and bridges. All costs for this work shall be incidental to the other contract items.

TIE BOLT ASSEMBLY

GENERAL NOTES:

1. All holes for tie bolts shall be cast-in-place, 16 in. from outside edge of joint. Cast in inserts or sleeves, if used, shall be made of a corrosion resistant material.

2. Ties shall be 1" ϕ and conform to the requirements of ASTM A36. Nuts shall be heavy hex in conformance with ASTM A563. Washers shall conform to ASTM F436, Type 1. The welded pipe sleeve shall conform to ASTM A53, Grade B.

3. Welding and weld inspection shall be in conformance with the current edition of the AWS D1.1 Structural Steel Welding Code.

4. Tie Bolt Assembly shall be galvanized in accordance with ASTM A153.

5. Tie Bolt Assembly details may vary from that shown, but alternate tie bolt assemblies are subject to testing to demonstrate equal strength. Submit details, through proper channels, to the Office of Bridge Design for approval.

6. All costs for furnishing and installing the precast box culvert tie bolt assembly shall be incidental to the contract unit price per foot for the corresponding "Precast Concrete Box Culvert, Furnish" bid item.

CUTOFF WALL

1. All costs associated with furnishing and installing the Cutoff Wall, whether precast or cast-in-place, shall be incidental to the contract unit price per each for the corresponding "Precast Box Culvert End Section, Furnish" bid item.
2. Concrete for cast-in-place cutoff wall shall be Class M6 concrete in accordance with the Standard Specifications.
3. All reinforcing steel shall conform to ASTM A615 Grade 60.

DETAIL FOR FENCE ANCHORS

GENERAL NOTES:

1. The fence and post details shown are for illustrative purpose only. The fence shall be as specified elsewhere in the plans.
2. Eyebolts shall be placed on all of the box culvert wing walls.
3. Eyebolts shall be ⅝" dia. and shall conform to ASTM A307.
4. Eyebolts, nuts, and concrete inserts shall be galvanized in accordance with AASHTO M232 (ASTM A153). Concrete inserts of corrosion resistant material need not be galvanized.
5. Cast-in-place eyebolts shall have a nut attached, be 4 ½" (Min.) in length and shall be embedded such that the eye of the bolt is flush with the concrete surface. (See Eyebolt Details) As an alternate, cast-in-place concrete inserts, capable of developing the full strength of the ⅝" diameter threaded eyebolt, may be used and shall be set in the concrete in accordance with the manufacturer's recommendations. The eyebolt shall be of sufficient length to develop its full strength. The eye of the eyebolt shall be flush with the concrete surface.
6. The cost for furnishing and installing eyebolts and/or concrete inserts shall be incidental to the contract unit price per pound for "Reinforcing Steel" or shall be incidental to the contract unit price per each for the corresponding "Precast Box Culvert End Section, Furnish" bid item.
