SOUTH DAKOTA STATEWIDE FISHERIES SURVEY

Old Wall, Pennington County MCE-Lake-214-000 2018

Lake Information

Name: Old Wall

County: Pennington

Surface Area: 13 Acres

Surveys and Investigations

Survey methods used by gear type, date, and effort.

Gear	Date	Effort		
boat shocker (night)	Sep 18, 2018	1680 seconds		
frame net (std 3/4 in)	Jul 03, 2018	5 net-nights		

Common Fish Species Present

Black Crappie

Largemouth Bass

Bluegill

Black Bullhead

Golden Shiner

Terminology

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

A statewide effort to help make netting efforts comparable to all waters sampled across the state, occurred in 2017, with a switch to American Fisheries Society gill nets. Past gill netting efforts were completed with different style/types of nets and are not comparable side by side.

- AFS std gill net 80 ft experimental gill net containing eight panels (10 ft each) of varying monofilament meshes of 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25 and 2.50 inches.
- std experimental gill net for non-Missouri River waters 150 ft experimental gill net containing six panels (25 ft each) of varying monofilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.
- std experimental gill net for Missouri River reservoirs 300 ft experimental gill net containing six panels (50 ft each) of varying multifilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.

$$\mathit{CPUE} = \frac{\mathit{number of fish}}{\mathit{effort}}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left(\frac{number\ of\ fish \ge quality\ length}{number\ of\ fish \ge stock\ length}\right) \times 100$$

$$\textit{PSD} - \textit{P} = \left(\frac{number\ of\ fish\ \geq preferred\ length}{number\ of\ fish\ \geq stock\ length}\right) \ge 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (W) compared to a length-specific standard weight (Ws) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left(\frac{W}{Ws}\right) \times 100$$

Confidence intervals (CI) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (S), quality (Q), preferred (P), memorable (M) and trophy (T). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

	St	ock	Qu	ality	Preferred		Memorable		Tro	ophy
Species Name	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)
Black Bullhead	6	15	9	23	12	30	15	38	18	46

Fish Condition

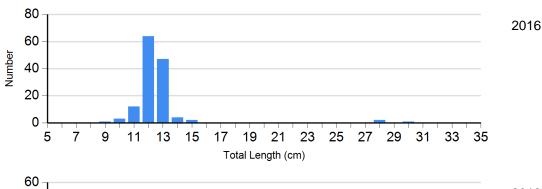

Mean relative weight (Wr) by sample size (N), length category stock to quality (S-Q), quality to preferred (Q-P), preferred to memorable (P-M), and memorable (M) for species collected across survey years with standard error (SE).

			s						
			S-Q		Q-P		P-M		М
Species	Year	N	Wr (SE)	N	Wr (SE)	N	Wr (SE)	N	Wr (SE)
Black Crappie Frame Net	2015	0		2	104 (1.2)	0		0	
	2016	53	121 (1.4)	0		2	93 (1.2)	1	91
	2018	120	101 (0.8)	2	92	0		0	
Bluegill Frame Net	2015	1	123	35	107 (2.0)	1	120	0	
	2016	218	118 (1.0)	696	104 (0.8)	0		0	
	2018	64	107 (1.5)	26	91 (1.7)	0		0	
Largemouth Bass Electro Fishing	2016	33	97 (1.4)	22	102 (2.1)	20	101 (2.3)	0	
	2018	6	103 (3.2)	0		4	96 (1.0)	0	

Length Frequency Distribution

Length frequency histogram of species sampled by year.

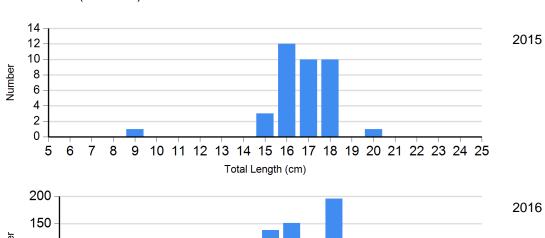

Species: Black Crappie Gear: frame net (std 3/4 in)

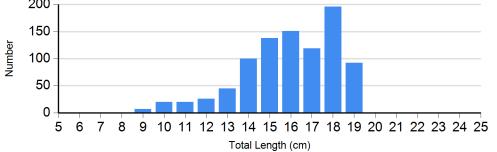

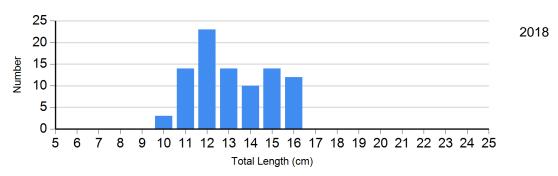

Species: Bluegill

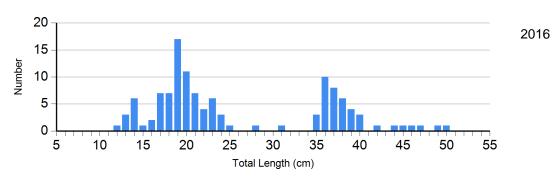

Gear: frame net (std 3/4 in)

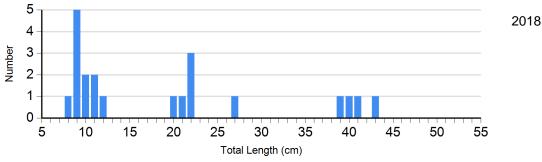

Species: Largemouth Bass Gear: boat shocker (night)

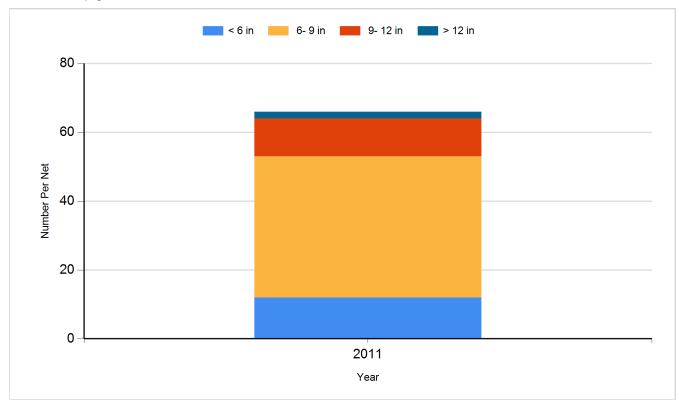

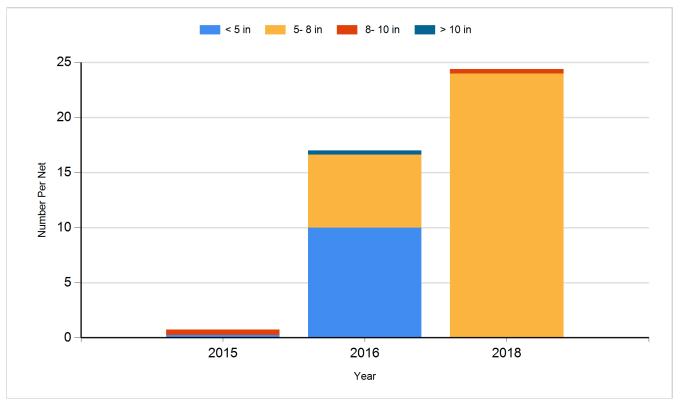

Historic Fish Sizes and Relative Abundance

Size distribution per net by color for species sampled by year.

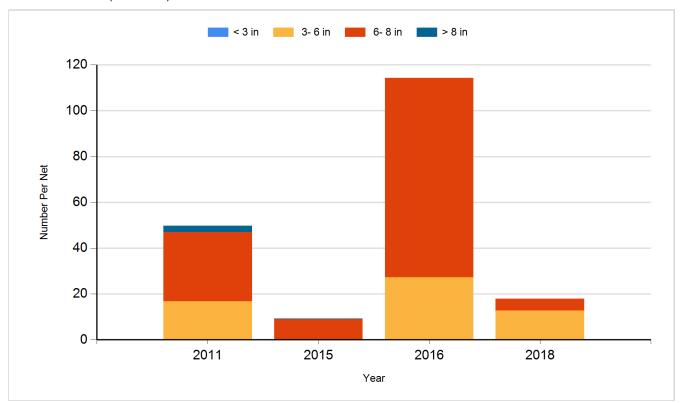

Species: Black Bullhead Gear: std exp gill net

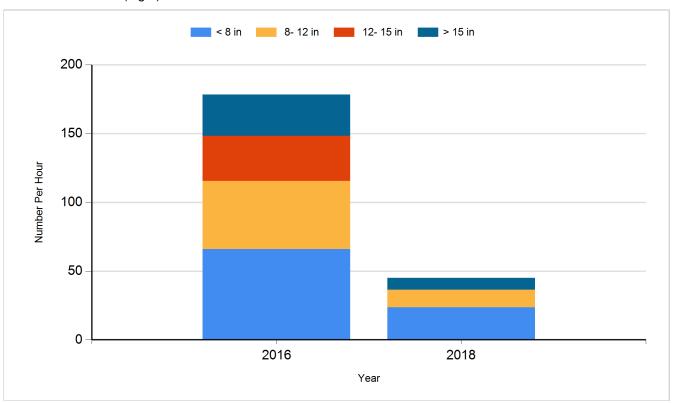

Species: Black Crappie Gear: frame net (std 3/4 in)

Species: Bluegill Gear: frame net (std 3/4 in)

Species: Largemouth Bass Gear: boat shocker (night)

Fish Stocking

Number of fish stocked by year, species, and size.

Year	Species	Size	Number
2007	Largemouth Bass	Adult	100
2008	Bluegill	Fingerling	6,000
2011	Largemouth Bass	Fingerling	5,000
