# SOUTH DAKOTA STATEWIDE FISHERIES SURVEY

# Byre, Lyman County MED-Lake-25-000

2021

#### Lake Information

| Name:              | Byre        | Maximum Depth: | 17 Feet |
|--------------------|-------------|----------------|---------|
| County:            | Lyman       | Mean Depth:    | 7 Feet  |
| Legal Description: | T75-R105-S4 |                |         |
| Surface Area:      | 121 Acres   |                |         |

#### **Surveys and Investigations**

Survey methods used by gear type, date, and effort.

| Gear              | Date         | Effort       |
|-------------------|--------------|--------------|
| fall night EF-WAE | Sep 15, 2021 | 3600 seconds |

# **Common Fish Species Present**

Walleye

Largemouth Bass

Black Crappie

#### **Terminology**

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

A statewide effort to help make netting efforts comparable to all waters sampled across the state, occurred in 2017, with a switch to American Fisheries Society gill nets. Past gill netting efforts were completed with different style/types of nets and are not comparable side by side.

- **AFS std gill net** 80 ft experimental gill net containing eight panels (10 ft each) of varying monofilament meshes of 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25 and 2.50 inches.
- std experimental gill net for non-Missouri River waters 150 ft experimental gill net containing six panels (25 ft each) of varying monofilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.
- std experimental gill net for Missouri River reservoirs 300 ft experimental gill net containing six panels (50 ft each) of varying multifilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.

$$\textit{CPUE} = \frac{\textit{number of fish}}{\textit{effort}}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left(\frac{number \ of fish \ge quality \ length}{number \ of \ fish \ge stock \ length}\right) \ge 100$$

$$PSD - P = \left(\frac{number \ offish \ge preferred \ length}{number \ of \ fish \ge stock \ length}\right) \ge 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (W) compared to a length-specific standard weight (Ws) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left(\frac{W}{Ws}\right) \ge 100$$

Confidence intervals (**CI**) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (**S**), quality (**Q**), preferred (**P**), memorable (**M**) and trophy (**T**). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

|                 | St   | ock  | Qu   | ality | Preferred |      | Mem  | orable | Trophy |      |
|-----------------|------|------|------|-------|-----------|------|------|--------|--------|------|
| Species Name    | (in) | (cm) | (in) | (cm)  | (in)      | (cm) | (in) | (cm)   | (in)   | (cm) |
| Black Bullhead  | 6    | 15   | 9    | 23    | 12        | 30   | 15   | 38     | 18     | 46   |

#### **Length Frequency Distribution**

Length frequency histogram of species sampled by year.

Species: Largemouth Bass Gear: boat shocker (night)

Species: Walleye Gear: std exp gill net

#### **Historic Fish Sizes and Relative Abundance**

Size distribution per net by color for species sampled by year.

#### Species: Black Crappie Gear: frame net (std 3/4 in)

Species: Largemouth Bass Gear: boat shocker (night)

Species: Walleye Gear: AFS std gill net

Species: Walleye Gear: std exp gill net

# Fish Stocking

Number of fish stocked by year, species, and size.

| Year | Species | Size             | Number |
|------|---------|------------------|--------|
| 2010 | Walleye | Small Fingerling | 14,980 |
| 2013 | Walleye | Large Fingerling | 1,144  |
| 2015 | Walleye | Large Fingerling | 900    |
| 2017 | Walleye | Large Fingerling | 2,960  |
| 2019 | Walleye | Small Fingerling | 9,185  |
| 2021 | Walleye | Juvenile         | 10,866 |
|      |         |                  |        |
