

Pactola Reservoir

Pactola Reservoir is a 825 acre reservoir located 18 miles west of Rapid City. Pactola is a popular recreational and fishing lake. The primary fish species are Rainbow Trout, Lake Trout, Brown Trout, Northern Pike, Bluegill, Black Crappie, Largemouth Bass, Kokanee Salmon and Yellow Perch. There are several secondary species such as Rock Bass, White Sucker, Golden Shiner and Green Sunfish.

Rainbow Trout. Rainbow Trout are stocked into Pactola on a yearly basis. In 2023 19,674 large rainbow trout averaging 2lbs and 145,126 fry were stocked. Fisherman have success fishing the bays located near the boat ramps shortly after stocking.

Lake Trout. Pactola is home to a healthy population of Lake Trout. In the 2023 surveys the gill nets averaged 1.6 fish per net with lengths ranging from 22-31 inches.

Brown Trout. 5000 adult brown trout were stocked into Pactola in 2023. The 2023 surveys had 0.7 fish per gill net. Fish ranged from 11-18 inches.

Northern Pike. Pactola has a steady population of Northern Pike. In 2023 the gill net surveys had 1.6 fish per net and 0.4 fish per trap net. Fish ranged from 20-43 inches.

Bluegill. Pactola has an abundance of bluegill. The 2023 surveys had 102.0 fish per trap net and 2.8 fish per gill net. The bluegill ranged from 4-8 inches. With the average around 5 inches.

Black Crappie. Pactola's black crappie population can be found in the bays. No crappie were surveyed in 2023. Fishermen have success when actively fishing for the crappie.

Largemouth Bass. Pactola's bass population has avoided the surveys for several years. Fisherman report catching largemouth bass when targeting them.

Kokanee Salmon. Pactola has been stocked with Kokanee since 2022. In 2023 there were 50,522 juveniles stocked. The salmon haven't shown up in any of the surveys yet. And no fishermen have reported catching them yet. We are hoping to start seeing the Kokanee show up in the system later in 2024.

Yellow Perch. Yellow Perch can be found scattered within the bays of Pactola. In 2023 the surveys had 1.5 fish per gill net and 2.4 fish per trap net. The perch averaged 6-7 inches.

SOUTH DAKOTA STATEWIDE FISHERIES SURVEY
Pactola Reservoir, Pennington County

2023

Lake Information

Name: Pactola Reservoir
County: Pennington
Surface Area: 825 Acres

Surveys and Investigations

Survey methods used by gear type, date, and effort.

Gear	Date	Effort
AFS std gill net	Jul 18, 2023	16 net-nights
frame net (std 3/4 in)	Jul 18, 2023	8 net-nights
suspended gill net	Jul 18, 2023	8 net-nights

Common Fish Species Present

Rainbow Trout

Lake Trout

Brown Trout

Bluegill

Rock Bass

Yellow Perch

Northern Pike

White Sucker

Green Sunfish

Golden Shiner

Terminology

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

A statewide effort to help make netting efforts comparable to all waters sampled across the state, occurred in 2017, with a switch to American Fisheries Society gill nets. Past gill netting efforts were completed with different style/types of nets and are not comparable side by side.

- **AFS std gill net** – 80 ft experimental gill net containing eight panels (10 ft each) of varying monofilament meshes of 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25 and 2.50 inches.
- **std experimental gill net for non-Missouri River waters** - 150 ft experimental gill net containing six panels (25 ft each) of varying monofilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.
- **std experimental gill net for Missouri River reservoirs** – 300 ft experimental gill net containing six panels (50 ft each) of varying multifilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.

$$CPUE = \frac{\text{number of fish}}{\text{effort}}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left(\frac{\text{number of fish} \geq \text{quality length}}{\text{number of fish} \geq \text{stock length}} \right) \times 100$$

$$PSD - P = \left(\frac{\text{number of fish} \geq \text{preferred length}}{\text{number of fish} \geq \text{stock length}} \right) \times 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (**W**) compared to a length-specific standard weight (**Ws**) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left(\frac{W}{W_s} \right) \times 100$$

Confidence intervals (CI) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (S), quality (Q), preferred (P), memorable (M) and trophy (T). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

Species Name	Stock		Quality		Preferred		Memorable		Trophy	
	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)
