Lake Mitchell Survey Summary

Lake Mitchell, located in Mitchell, SD, is managed as a bluegill, largemouth bass, and walleye fishery; other fish species (e.g., black crappie, channel catfish, flathead catfish, freshwater drum, smallmouth bass, and white crappie) provide additional angling opportunities.

- **Bluegill.** Bluegill abundance increased to 21.4 fish per frame net in 2024 resulting in one of the highest catch rates in the region. Relative abundance was similar to the previous year but well above the long term mean (CPUE = 20.5 and 12.1 fish per net, respectively). Netted fish ranged from 3.1 to 8.5 inches in length with approximately 75% measuring >6 inches. The sample was comprised of six year classes of fish ranging from 1 to 6 years in age. The age 2 cohort accounted for a majority of catches (53%) followed by age 3 fish (32%). Growth was excellent with fish averaging 6.1 inches in length by age 2 and 7.1 inches by age 3. A high mean relative weight score (Wr = 107) indicates the bluegill population is in great condition. Any angler targeting bluegill in the southeast region should be sure to consider trying Lake Mitchell.

- **Black Crappie**. Black crappie abundance improved considerably from the previous sample year (CPUE = 1.3 and 7.1 fish per frame net in 2023 and 2024, respectively). Netted fish ranged from 3.9 to 10.6 inches in length with approximately 22% measuring in the quality length category (>8 inches). Aging data from previous years indicates black crappie typically grow to a mean length of 6 inches by age 2 and 8 inches by age 3 in Lake Mitchell. A high mean relative weight score (Wr = 96 in 2024) indicates the black crappie population is in good condition.

- **Channel Catfish.** The 2024 net catches of channel catfish (15.4/net) were the highest since 2015 (18.7/net). Size of Lake Mitchell channel catfish is excellent with over 90% of the stock length (11 inch and longer) channel catfish caught in nets at least measuring 16 inches and nearly 20% measuring over 24 inches long. Lake Mitchell provides one of the best channel catfish opportunities in the state.

- **Walleye.** Sampling efforts produced a catch rate of 0.5 walleye per gill net in 2024. Relative abundance was similar to the previous year and long term mean (CPUE = 0.6 and 0.4 fish per net, respectively). Sampled fish ranged from 15.3 to 20.6 inches in length with 20% measuring in the preferred length category (>20 inches). Fisheries staff began stocking saugeye this year (400,00 fry and 56,000 juveniles) in an attempt to improve catch rates. These walleye/sauger hybrids have been found to be more productive in lakes with marginal water conditions.

For more detailed results see the computer-generated South Dakota Statewide Fisheries Survey For Lake Mitchell (below).

SOUTH DAKOTA STATEWIDE FISHERIES SURVEY
Mitchell, Davison County
LJA-Lake-623-000
2024

Lake Information

Name:	Mitchell	**Maximum Depth:**	29 Feet
County:	Davison	**Mean Depth:**	12 Feet
Legal Description:	T103W- R60N-Sec 4-6, 9; T104N-R60W-Sec 31-32		
Surface Area:	690 Acres	**Watershed Area:**	19,821.31 Sq Miles

Surveys and Investigations

Survey methods used by gear type, date, and effort.

Gear	Date	Effort
AFS std gill net	Jun 12, 2024	5 net-nights
AFS std gill net	Jun 13, 2024	5 net-nights
frame net (std 3/4 in)	Jun 12, 2024	4 net-nights
frame net (std 3/4 in)	Jun 13, 2024	5 net-nights

Common Fish Species Present

Largemouth Bass

Bluegill

Black Crappie

Channel Catfish

Freshwater Drum

White Crappie

River Carpsucker

Common Carp

Smallmouth Bass

Walleye

Terminology

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

A statewide effort to help make netting efforts comparable to all waters sampled across the state, occurred in 2017, with a switch to American Fisheries Society gill nets. Past gill netting efforts were completed with different style/types of nets and are not comparable side by side.

- **AFS std gill net** – 80 ft experimental gill net containing eight panels (10 ft each) of varying monofilament meshes of 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25 and 2.50 inches.
- **std experimental gill net for non-Missouri River waters** - 150 ft experimental gill net containing six panels (25 ft each) of varying monofilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.
- s**td experimental gill net for Missouri River reservoirs** – 300 ft experimental gill net containing six panels (50 ft each) of varying multifilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.

$$CPUE = \frac{number\ of\ fish}{effort}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left(\frac{number\ of\ fish \geq quality\ length}{number\ of\ fish \geq stock\ length}\right) \text{x } 100$$

$$PSD - P = \left(\frac{number\ of\ fish \geq preferred\ length}{number\ of\ fish \geq stock\ length}\right) \text{x } 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (W) compared to a length-specific standard weight (Ws) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left(\frac{W}{Ws}\right) \text{x } 100$$

Confidence intervals (**CI**) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (**S**), quality (**Q**), preferred (**P**), memorable (**M**) and trophy (**T**). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

	Stock		Quality		Preferred		Memorable		Trophy	
Species Name	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)

2021	104		188 (66)	215 (28)		227 (11)					
2015	8		186 (8)								

Fish Condition

Mean relative weight (Wr) by sample size (N), length category stock to quality (S-Q), quality to preferred (Q-P), preferred to memorable (P-M), and memorable (M) for species collected across survey years with standard error (SE).

		Length Groups							
		S-Q		Q-P		P-M		M	
Species	Year	N	Wr (SE)	N	Wr (SE)	N	Wr (SE)	N	Wr (SE)
Black Crappie Frame Net	2021	73	100 (1.2)	54	91 (1.0)	2		0	
	2022	9	103 (2.3)	25	95 (1.5)	0		1	90
	2023	9	119 (2.8)	1	95	3	84 (5.0)	0

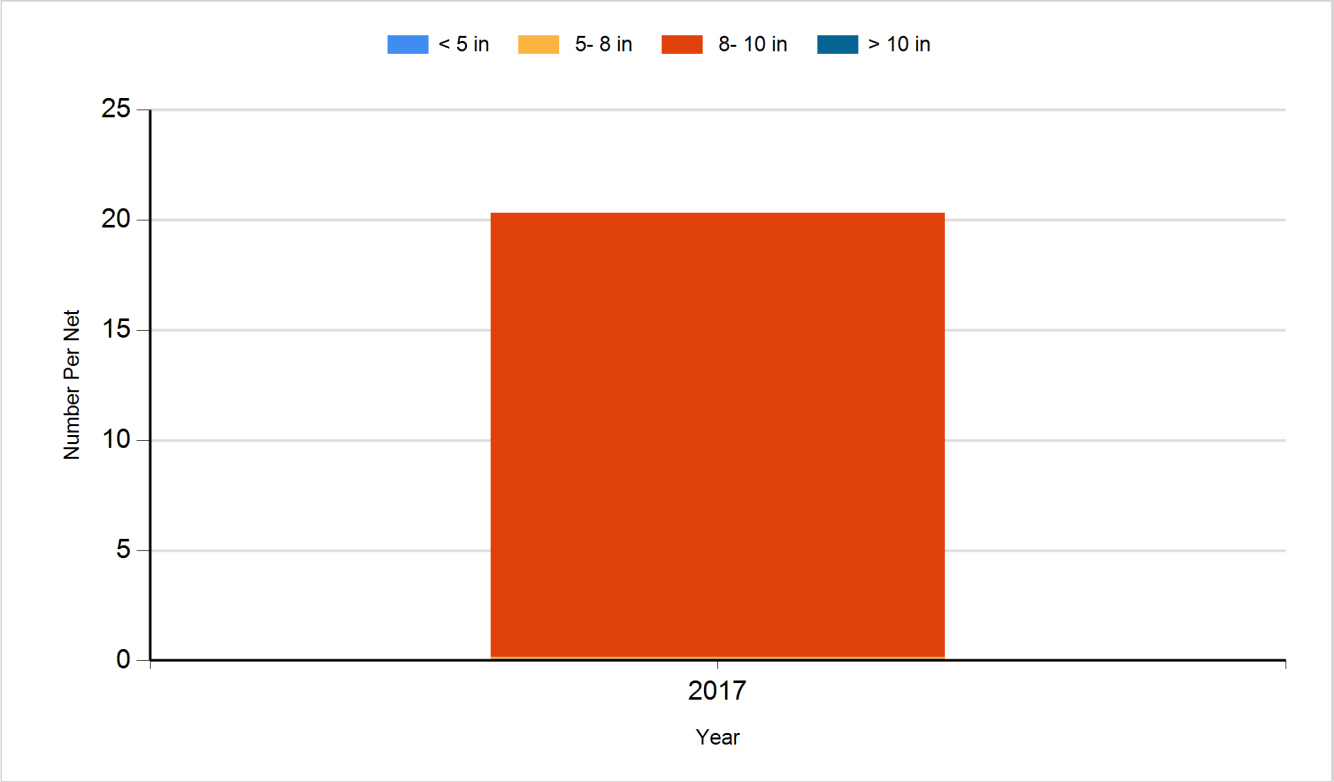
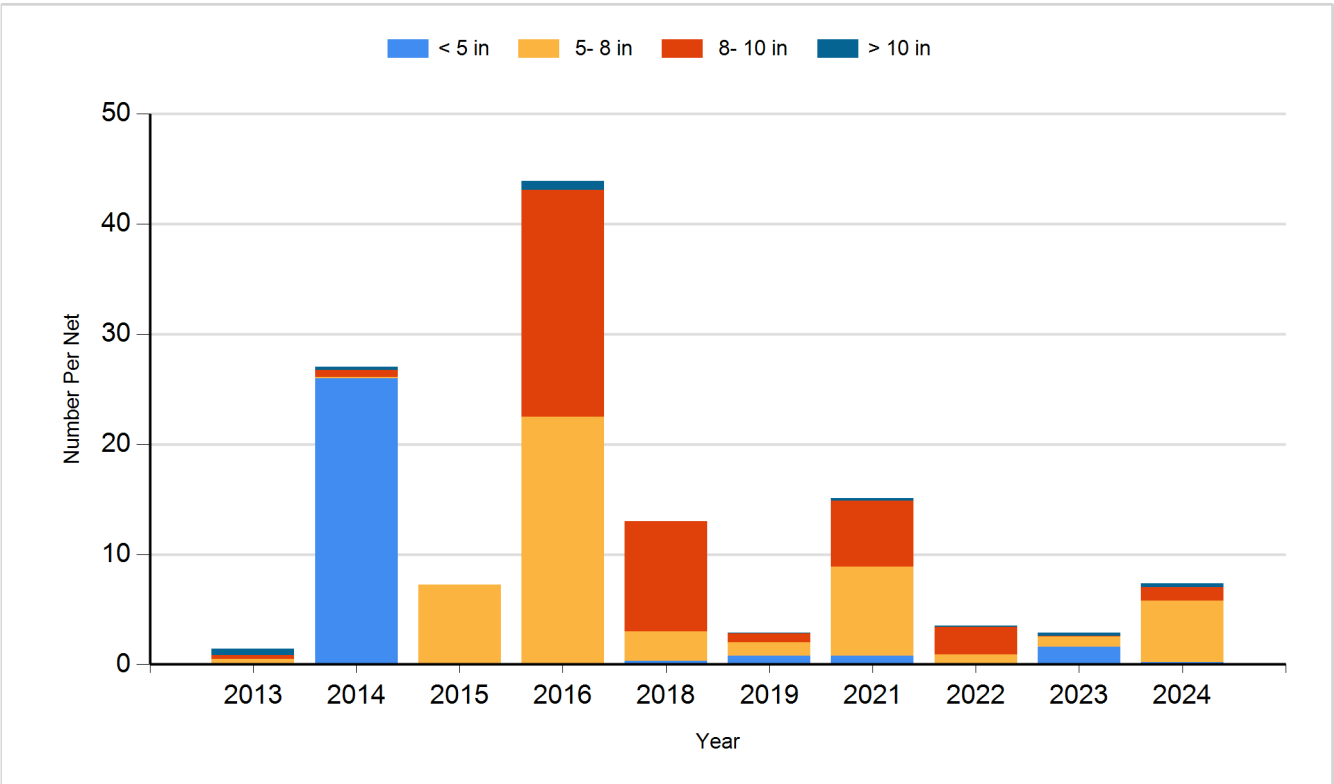
Historic Fish Sizes and Relative Abundance

Size distribution per net by color for species sampled by year.

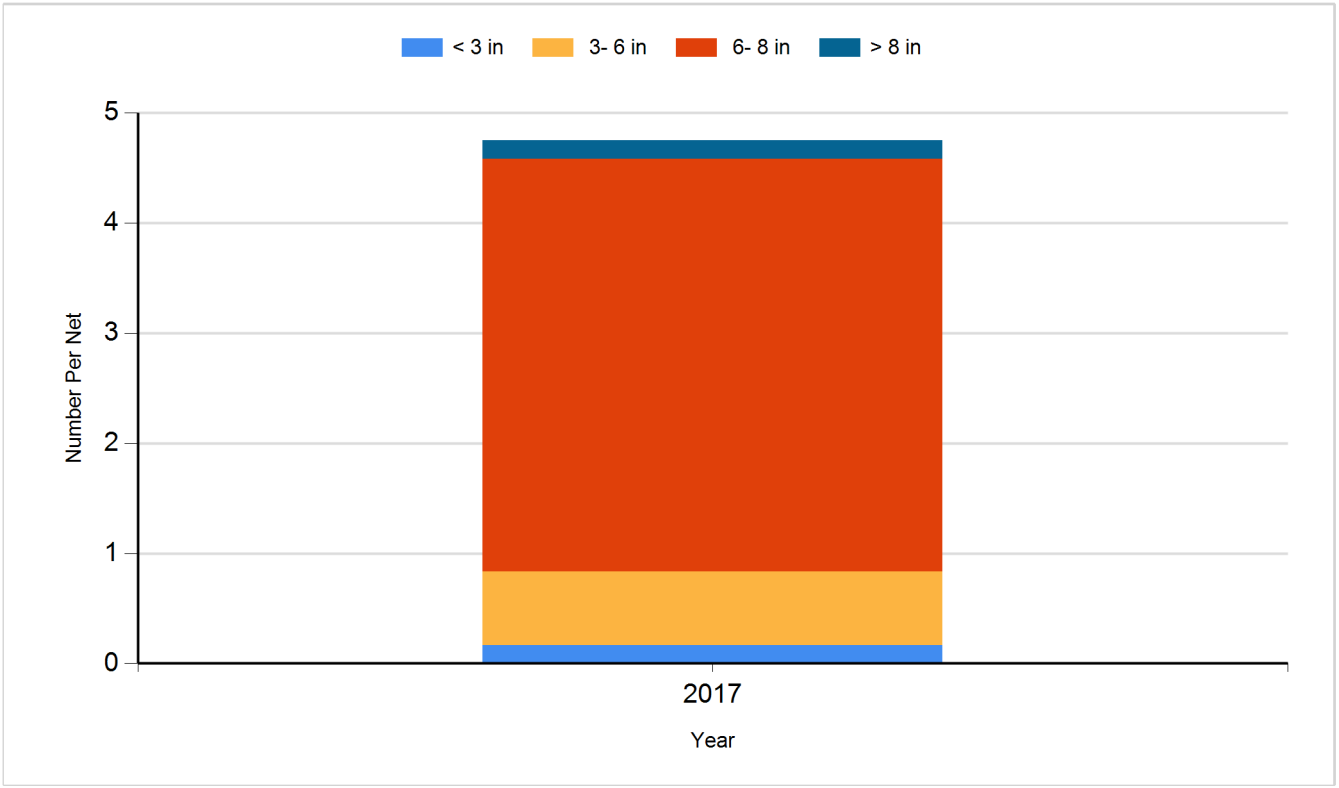
Species: Black Crappie
Gear: AFS std frame net



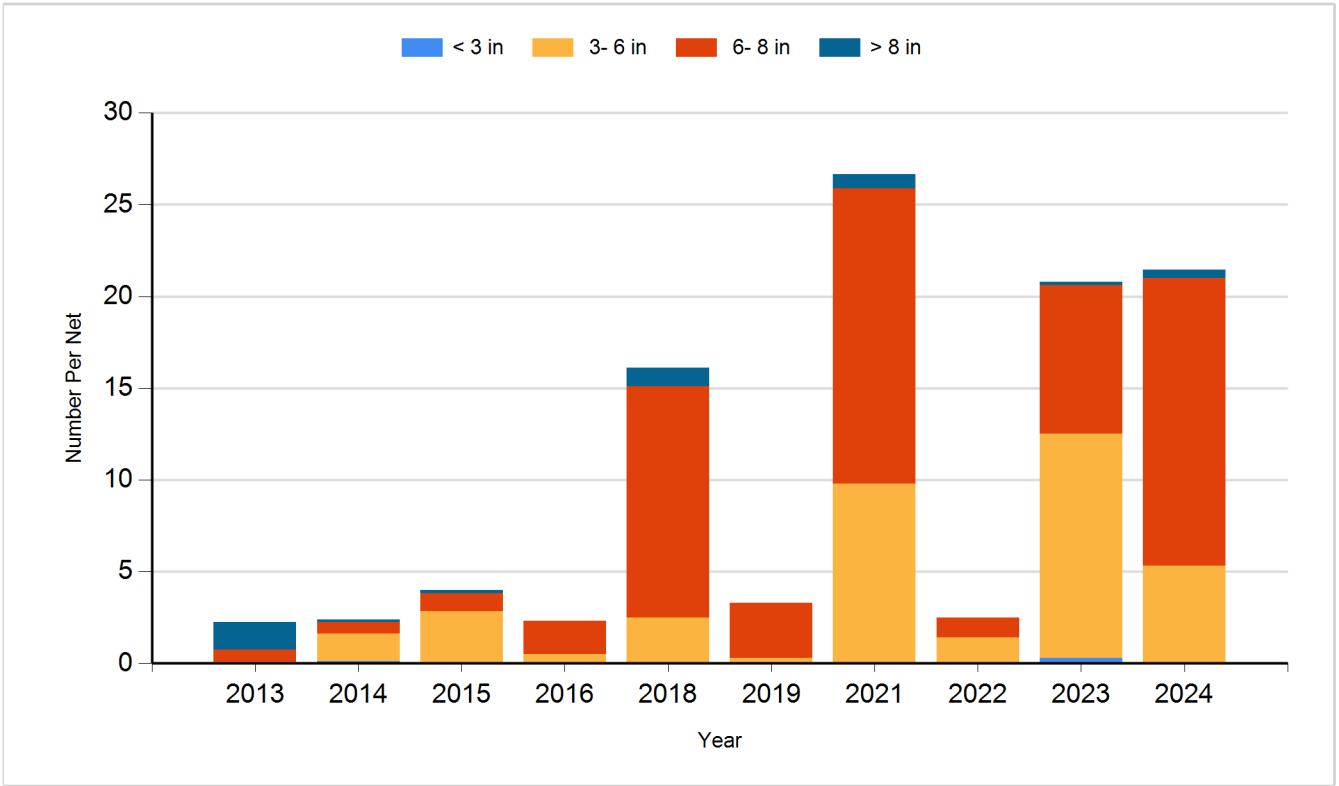
Species: Black Crappie
Gear: frame net (std 3/4 in)



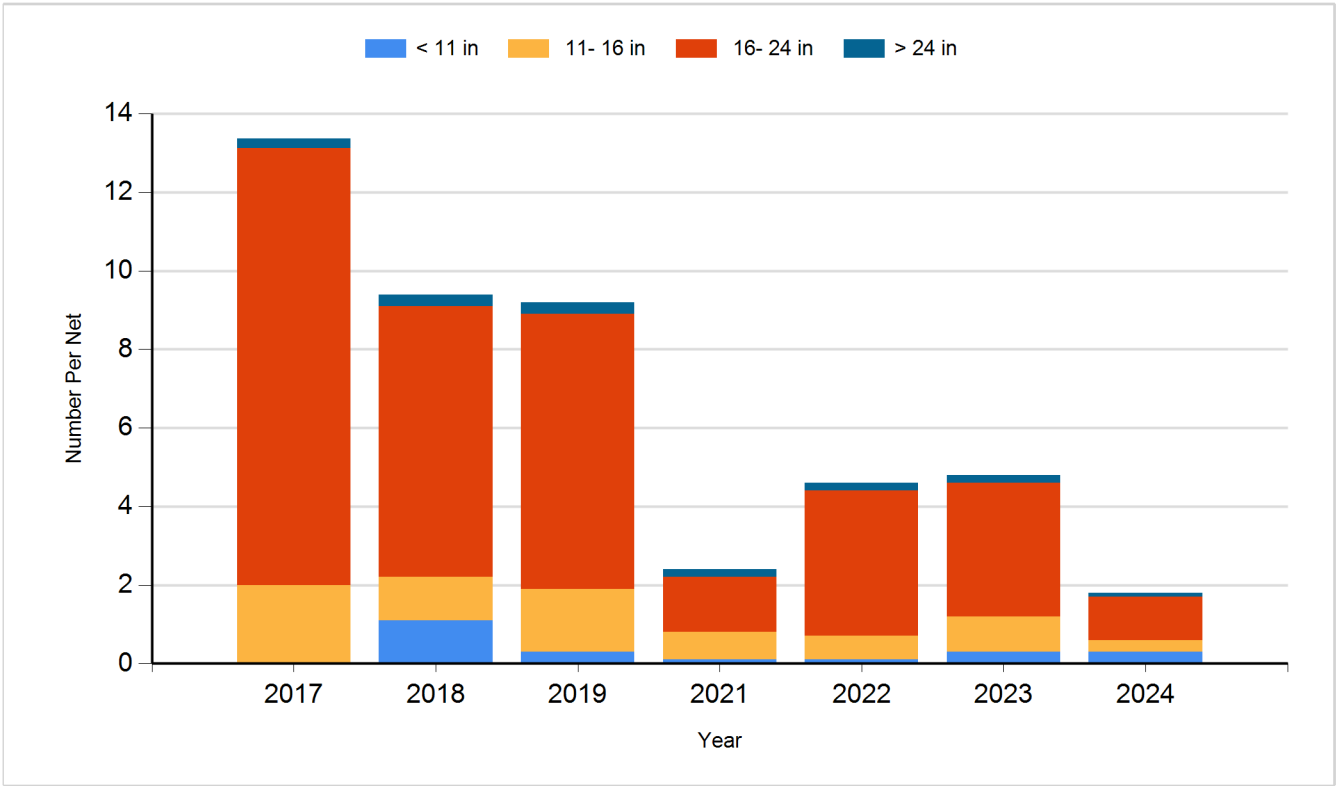
Species: Bluegill
Gear: AFS std frame net



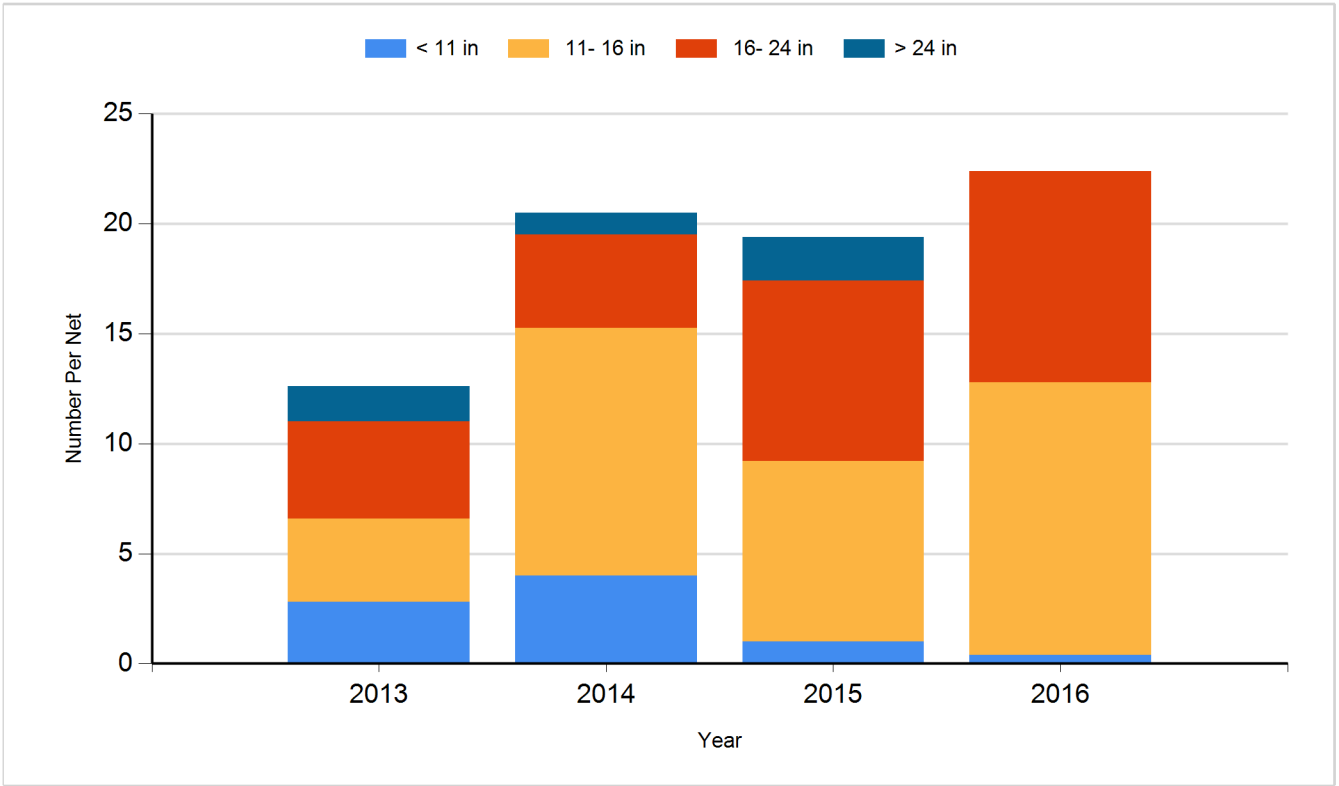
Species: Bluegill
Gear: frame net (std 3/4 in)



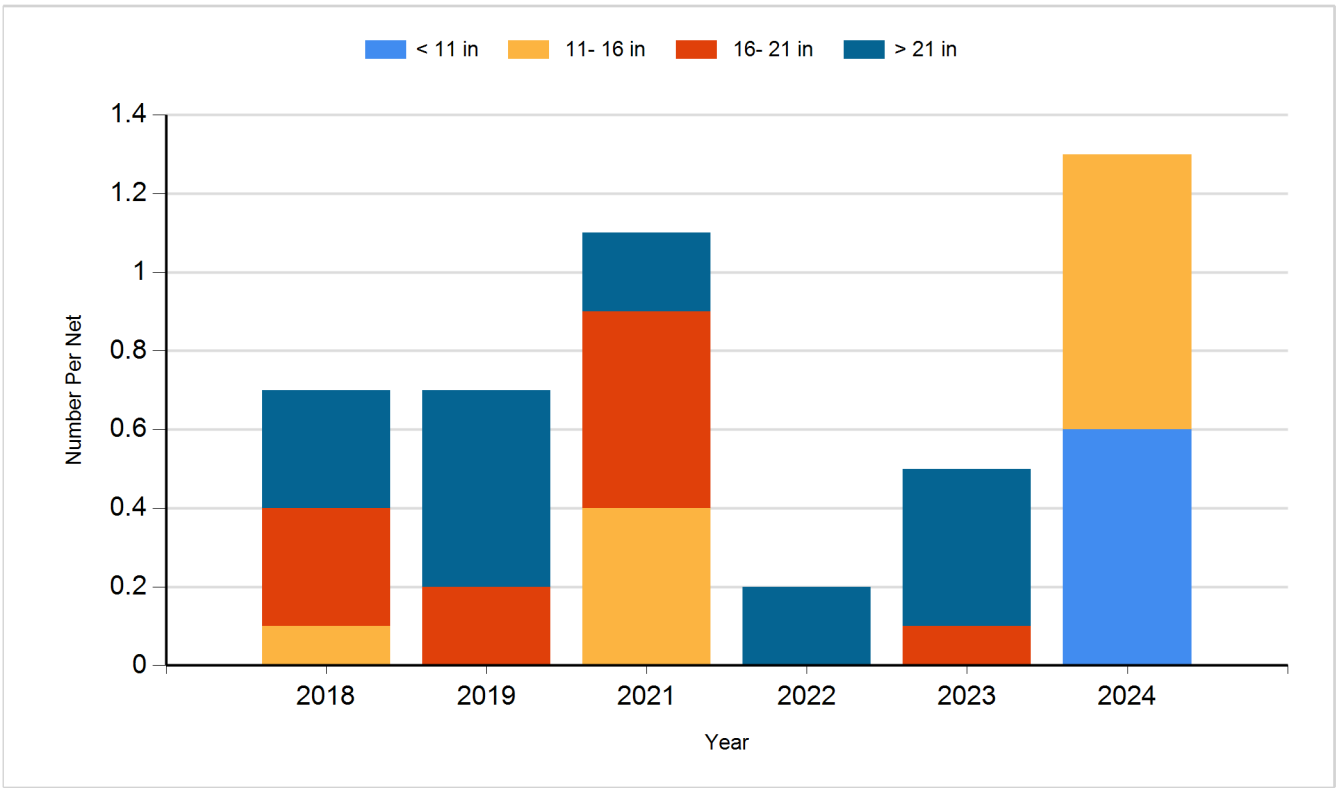
Species: Channel Catfish
Gear: AFS std gill net



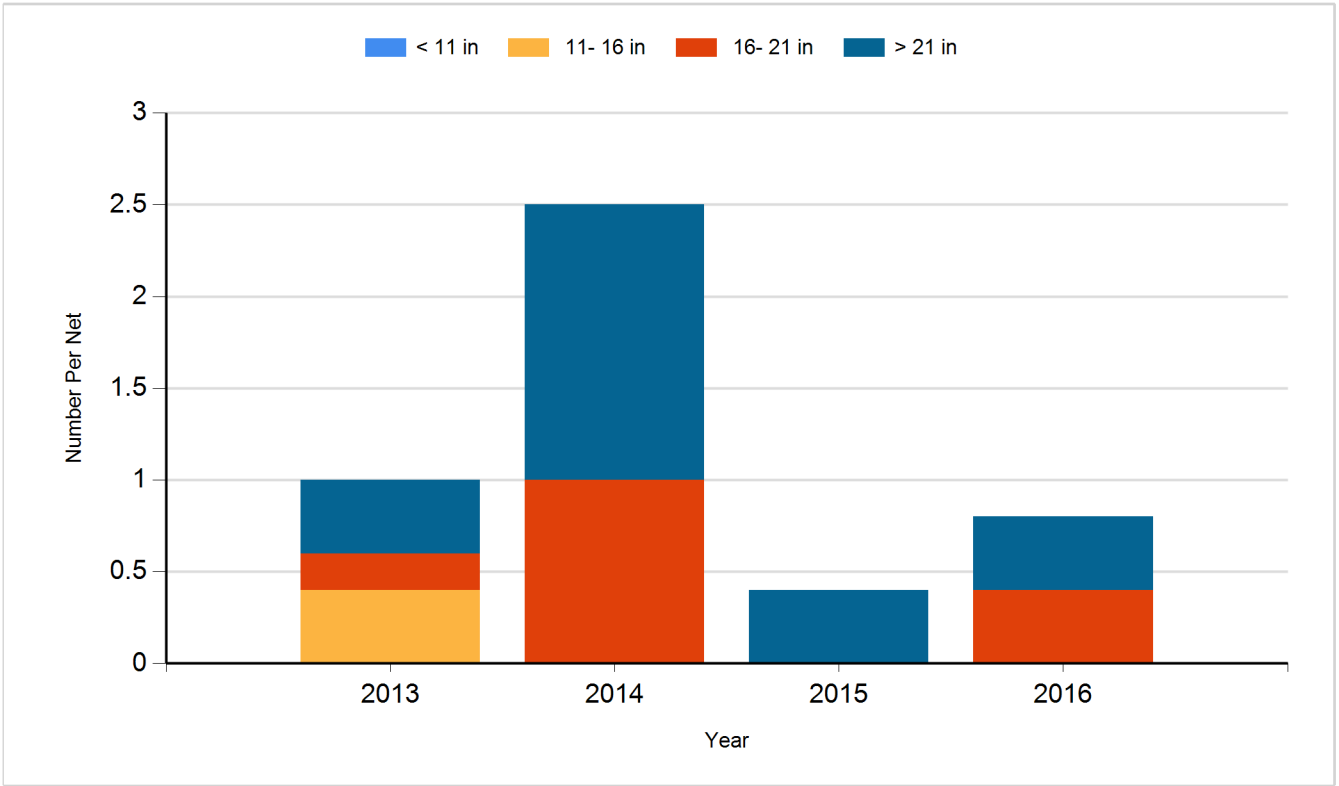
Species: Channel Catfish
Gear: std exp gill net



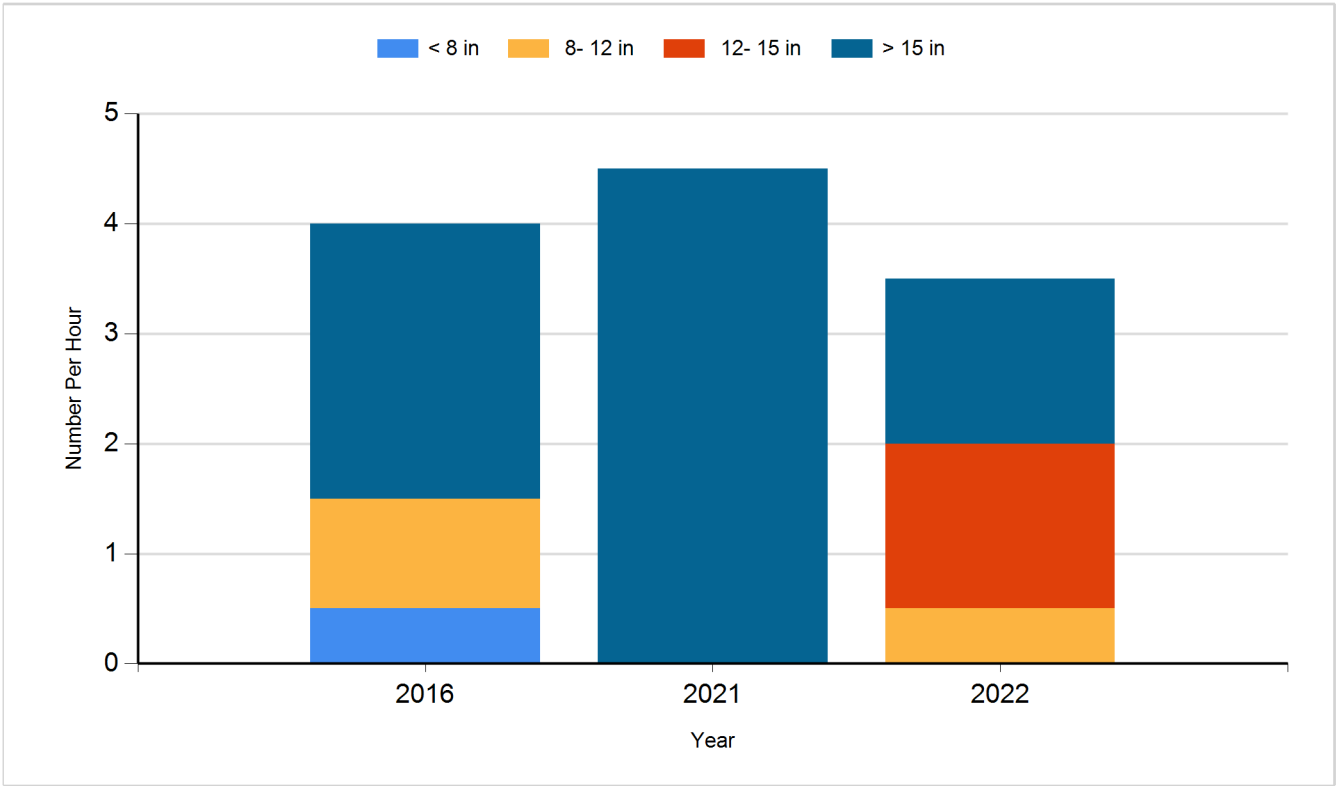
Species: Common Carp
Gear: AFS std gill net



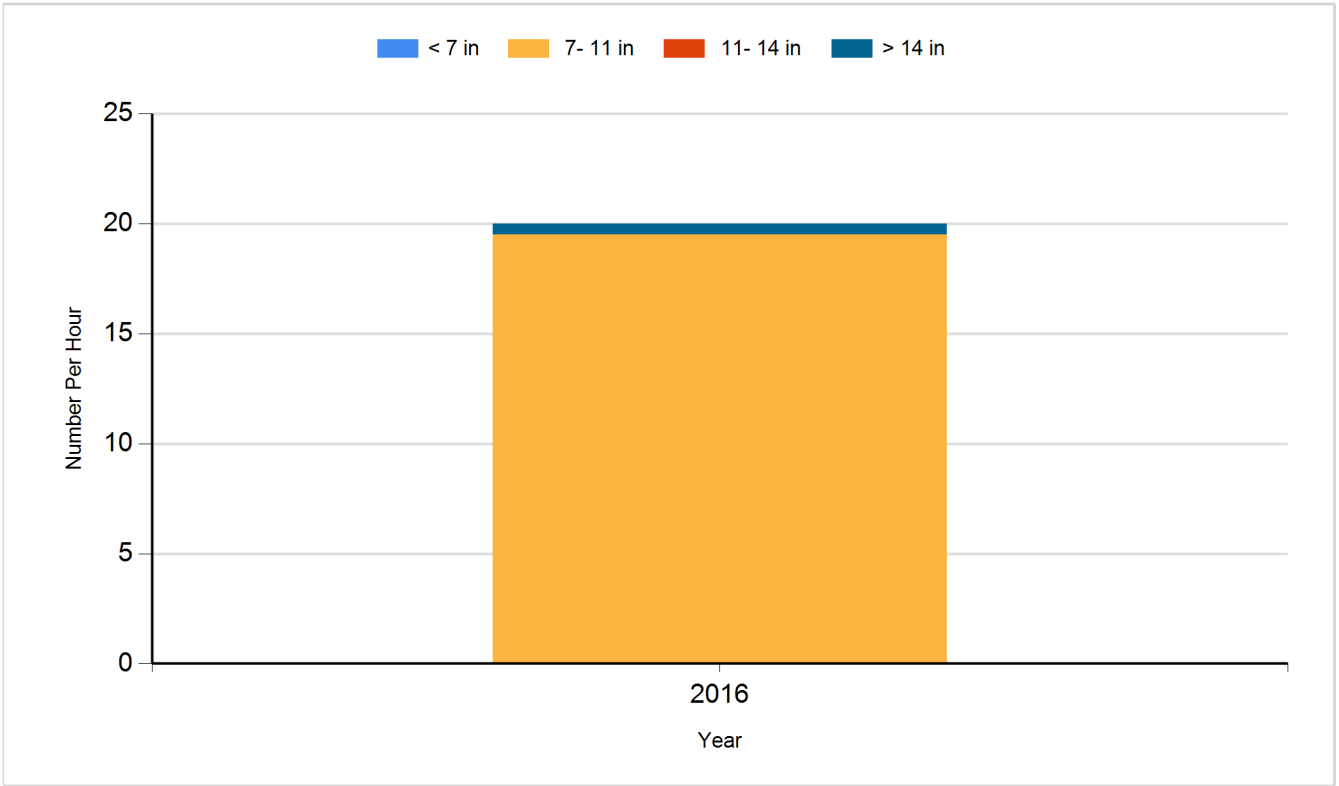
Species: Common Carp
Gear: std exp gill net



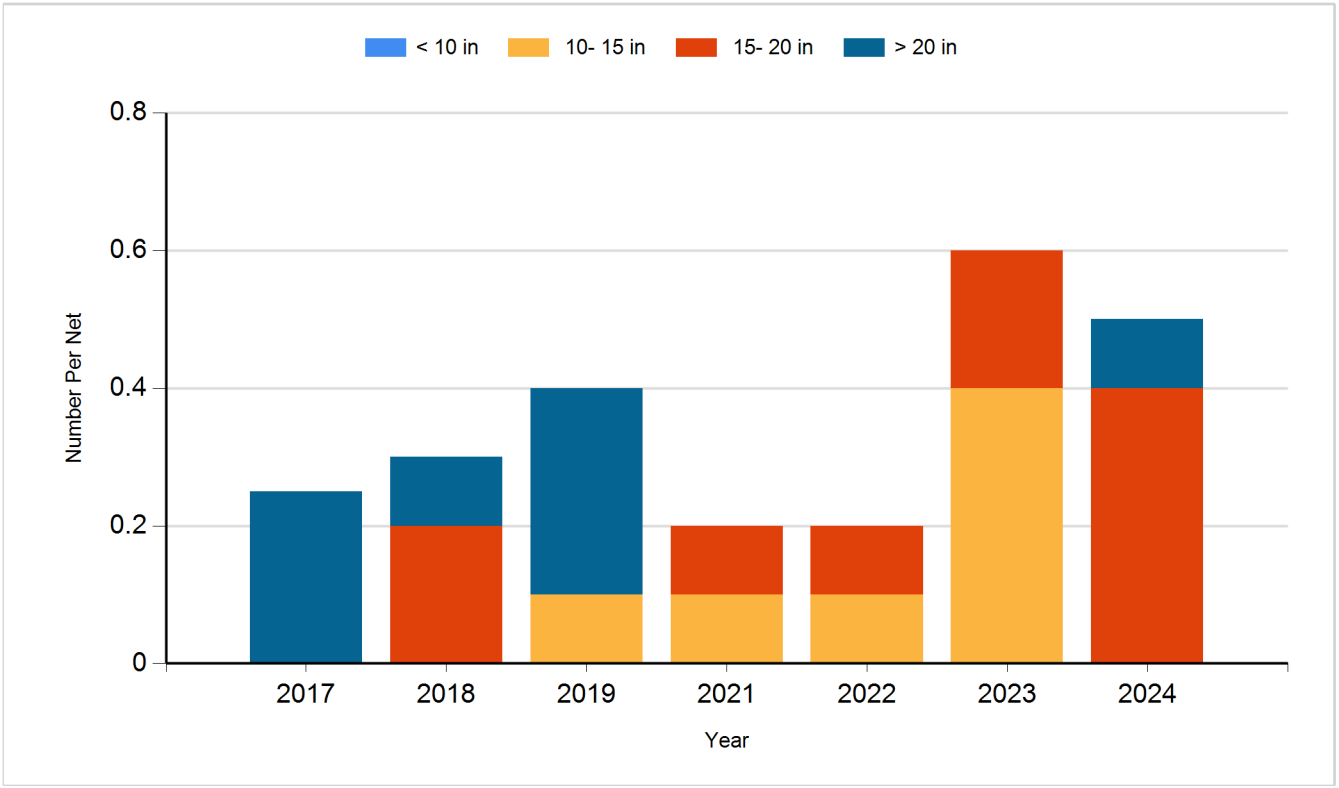
Species: Largemouth Bass
Gear: boat shocker (night)



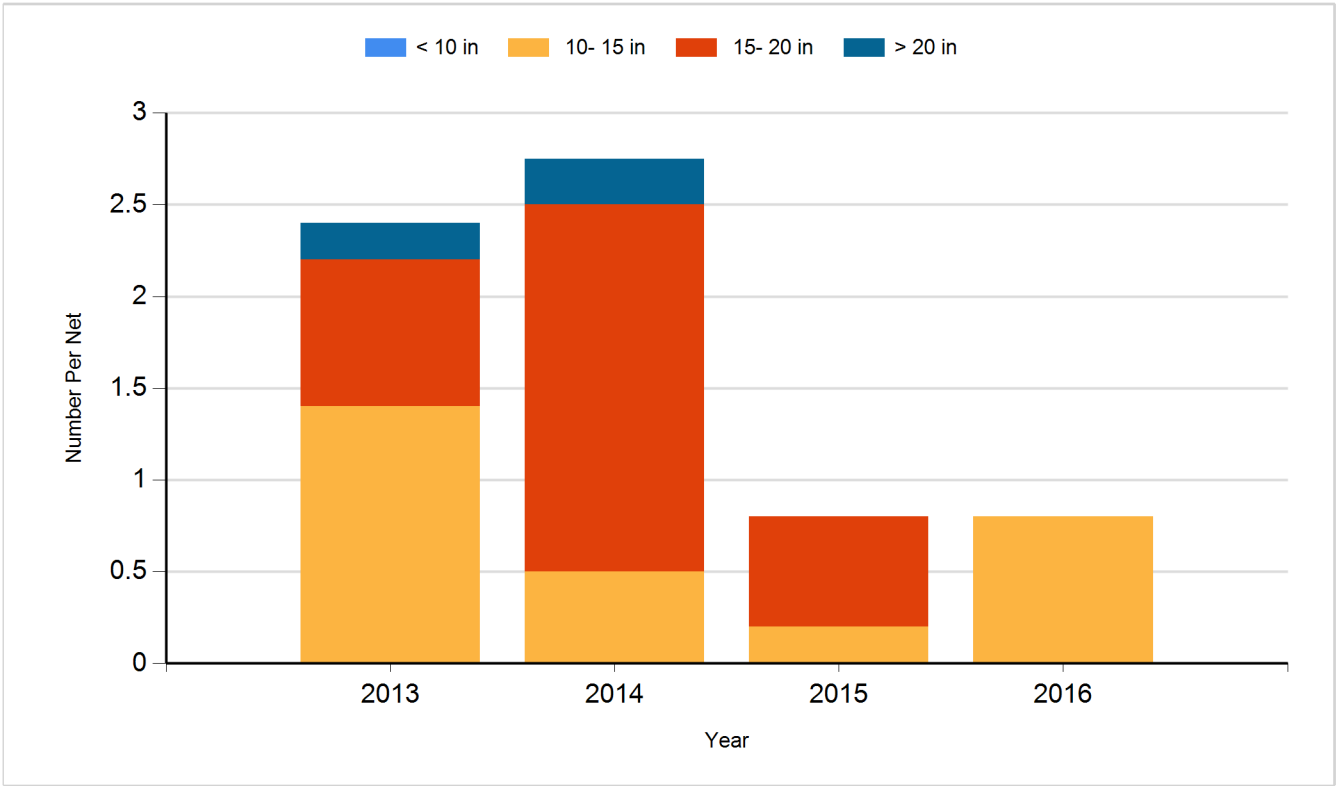
Species: Smallmouth Bass
Gear: boat shocker (night)



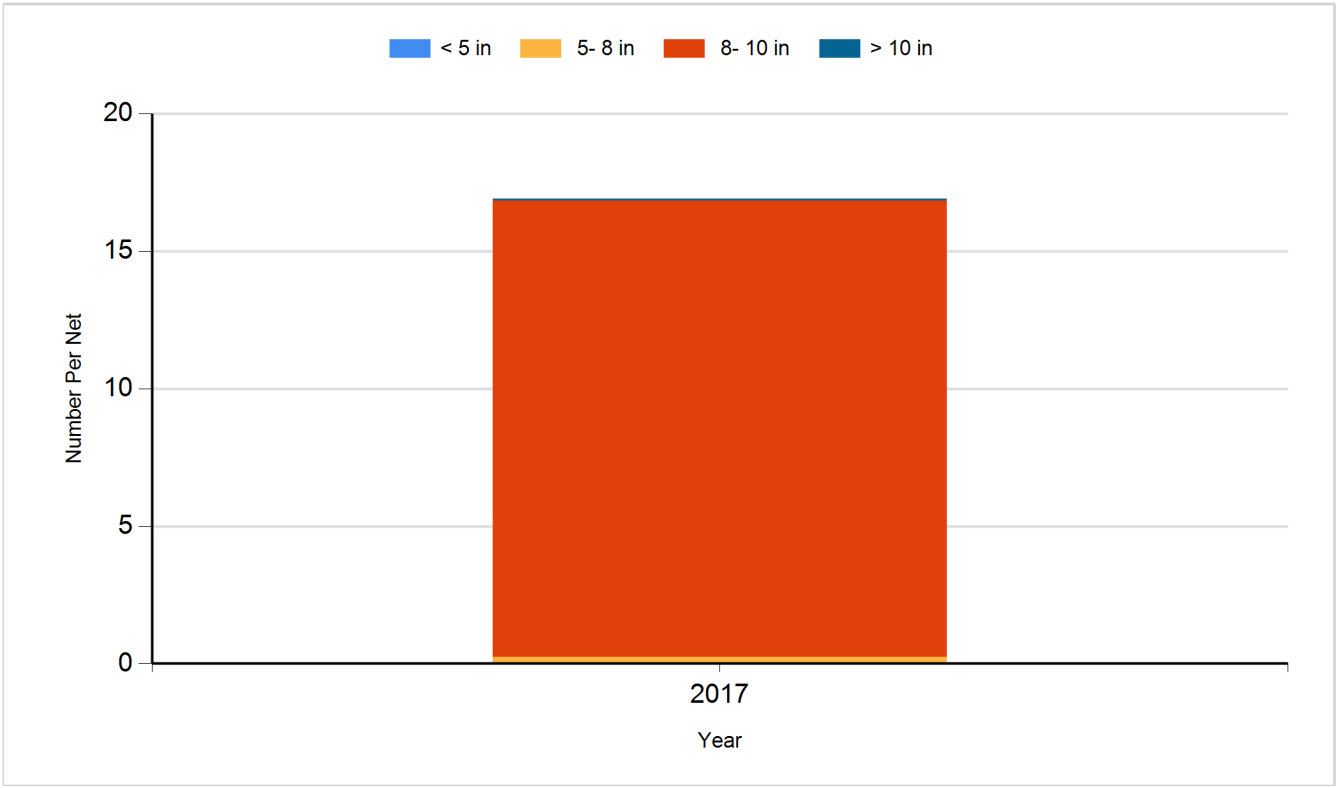
Species: Walleye
Gear: AFS std gill net



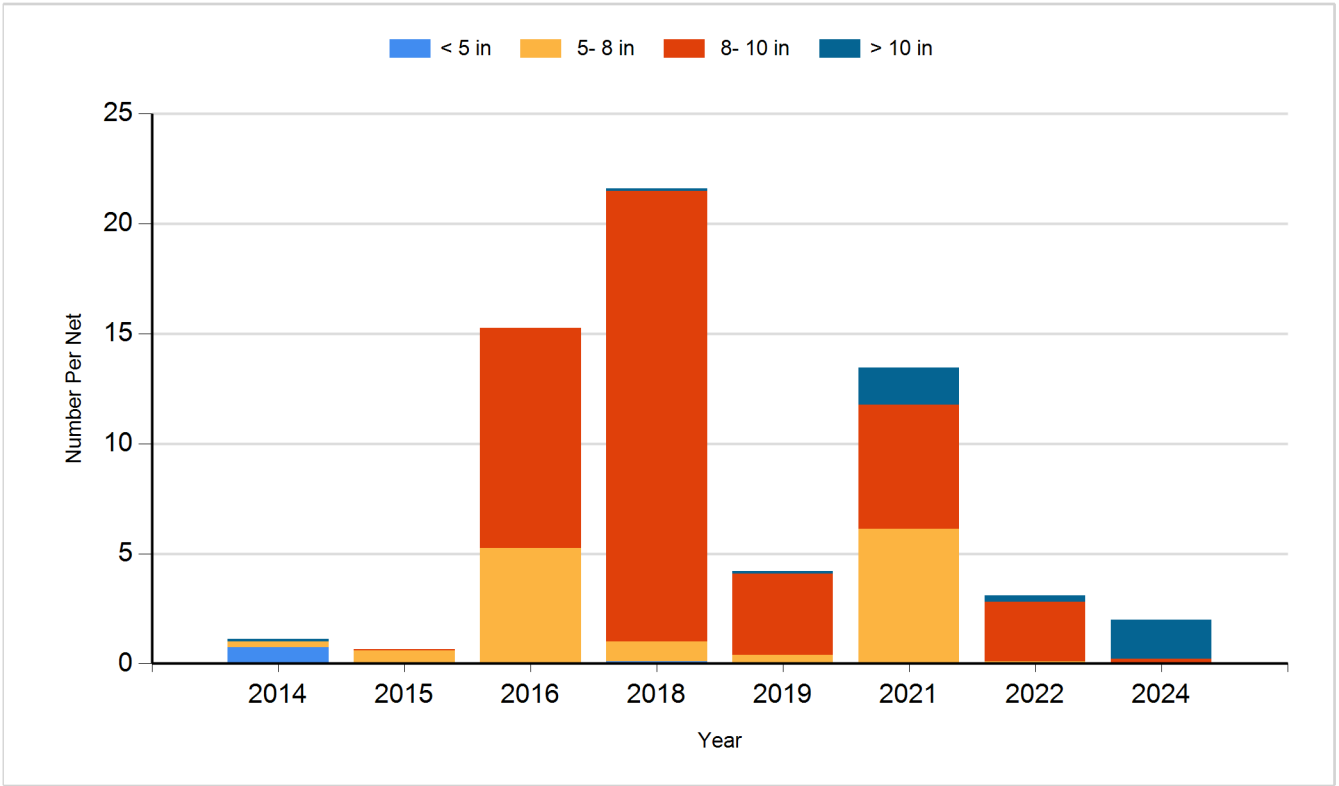
Species: Walleye
Gear: std exp gill net



Species: White Crappie
Gear: AFS std frame net



Species: White Crappie
Gear: frame net (std 3/4 in)



Fish Stocking

Number of fish stocked by year, species, and size.

Year	Species	Size	Number
2013	Walleye	Small Fingerling	32,080
2015	Walleye	Small Fingerling	52,698
2016	Walleye	Small Fingerling	48,020
2017	Walleye	Fingerling	59,000
2018	Walleye	Small	47,040
2019	Walleye	Small Fingerling	51,000
2021	Walleye	Juvenile	59,570
2022	Largemouth Bass	Juvenile	40,000
2024	Saugeye	Fry	400,000
2024	Saugeye	Juvenile	56,463
