

## Stockade Reservoir

Stockade is a 129-acre reservoir located 4.5 miles east of the town of Custer. It is located within Custer State Park so a South Dakota state parks sticker is needed. The primary fish species are Walleye, Yellow Perch, Smallmouth Bass, Largemouth Bass, Northern Pike, Bluegill and Black Crappie. Stockade is also home to some secondary species including Black Bullhead, White Sucker and Green Sunfish.

**Walleye.** Stockade's first stocking of Walleye was in 2017. In 2024 surveys had 2 fish per 60 minutes of boat electrofishing. The fish were in the 15–20-inch range.

**Yellow Perch.** Stockades Yellow Perch population suffers from a parasite commonly called white grub. The fish surveyed in 2024 showed that most of the perch were infected with the parasite. The surveys had 1.9 perch per gillnet and 8.4 fish per trap net. The perch were in the 5.5-8-inch range.

**Smallmouth Bass.** Stockade is home to some Smallmouth Bass. 4 were sampled via boat electrofishing in 2024, most of the fish were in the 7–11-inch range.

**Largemouth Bass.** There were 0.4 Largemouth Bass per gillnet and 71 fish were sampled via boat electrofishing in 2024. The oldest age class in stockade will be in the 12–15-inch range.

**Northern Pike.** The 2024 survey results had 1.8 Northern Pike per gillnet and 1.4 fish per trap net. Most of the pike were in the 21–28-inch range with several fish over 28 inches.

**Bluegill.** The surveys for 2024 had 11.9 Bluegill per gillnet and 24 fish per trap net. Most of the Bluegill will be in the 6–8-inch range, with several fish over the 8-inch mark.

**Black Crappie.** Stockade is home to a population of Black Crappie. The 2024 survey results are 3.7 fish per trap net and 1.8 fish per gill net. Most of the fish were over the 10-inch mark.

**SOUTH DAKOTA STATEWIDE FISHERIES SURVEY**  
**Stockade, Custer County**  
**MCS-Lake-12-000**  
**2024**

**Lake Information**

**Name:** Stockade  
**County:** Custer  
**Surface Area:** 129 Acres

**Surveys and Investigations**

Survey methods used by gear type, date, and effort.

Gear	Date	Effort
AFS std gill net	Aug 06, 2024	4 net-nights
AFS std gill net	Aug 07, 2024	4 net-nights
boat shocker (day)	Oct 11, 2024	3600 seconds
frame net (std 3/4 in)	Aug 06, 2024	4 net-nights
frame net (std 3/4 in)	Aug 07, 2024	3 net-nights

## **Common Fish Species Present**

Yellow Perch

Smallmouth Bass

Northern Pike

Largemouth Bass

Bluegill

Black Bullhead

Black Crappie

Walleye

Green Sunfish

White Sucker

---

## Terminology

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

A statewide effort to help make netting efforts comparable to all waters sampled across the state, occurred in 2017, with a switch to American Fisheries Society gill nets. Past gill netting efforts were completed with different style/types of nets and are not comparable side by side.

- **AFS std gill net** – 80 ft experimental gill net containing eight panels (10 ft each) of varying monofilament meshes of 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25 and 2.50 inches.
- **std experimental gill net for non-Missouri River waters** - 150 ft experimental gill net containing six panels (25 ft each) of varying monofilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.
- **std experimental gill net for Missouri River reservoirs** – 300 ft experimental gill net containing six panels (50 ft each) of varying multifilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.

$$CPUE = \frac{\text{number of fish}}{\text{effort}}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left( \frac{\text{number of fish} \geq \text{quality length}}{\text{number of fish} \geq \text{stock length}} \right) \times 100$$

$$PSD - P = \left( \frac{\text{number of fish} \geq \text{preferred length}}{\text{number of fish} \geq \text{stock length}} \right) \times 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (**W**) compared to a length-specific standard weight (**Ws**) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left( \frac{W}{W_s} \right) \times 100$$

Confidence intervals (CI) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (S), quality (Q), preferred (P), memorable (M) and trophy (T). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

Species Name	Stock		Quality		Preferred		Memorable		Trophy	
	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)
Black Bullhead	6	15	9	23	12	30	15	38	18	46

# Length Frequency Distribution

Length frequency histogram of species sampled by year.

Species: Black Bullhead  
Gear: AFS std gill net

Species: Black Crappie  
Gear: AFS std frame net

Species: Black Crappie  
Gear: frame net (std 3/4 in)

Species: Bluegill  
Gear: AFS std frame net

Species: Bluegill  
Gear: frame net (std 3/4 in)

Species: Largemouth Bass  
Gear: boat shocker (day)

Species: Largemouth Bass  
 Gear: boat shocker (night)

Species: Northern Pike  
 Gear: AFS std gill net

Species: Smallmouth Bass  
Gear: boat shocker (night)

Species: Yellow Perch  
Gear: AFS std gill net

## Historic Fish Sizes and Relative Abundance

Size distribution per net by color for species sampled by year.

Species: Black Bullhead  
Gear: AFS std gill net

Species: Black Bullhead  
Gear: std exp gill net

Species: Black Crappie  
Gear: AFS std frame net

Species: Black Crappie  
Gear: frame net (std 3/4 in)

Species: Bluegill  
Gear: AFS std frame net

Species: Bluegill  
Gear: frame net (std 3/4 in)

Species: Largemouth Bass  
Gear: boat shocker (day)

Species: Largemouth Bass  
Gear: boat shocker (night)

Species: Northern Pike  
Gear: AFS std gill net

Species: Northern Pike  
Gear: std exp gill net

Species: Smallmouth Bass  
Gear: boat shocker (day)

Species: Smallmouth Bass  
Gear: boat shocker (night)

Species: Walleye  
Gear: AFS std gill net

Species: White Sucker  
Gear: AFS std gill net

Species: White Sucker  
Gear: std exp gill net

Species: Yellow Perch  
Gear: AFS std gill net

Species: Yellow Perch  
Gear: std exp gill net

## **Fish Stocking**

Number of fish stocked by year, species, and size.

Year	Species	Size	Number
2013	Smallmouth Bass	Fingerling	4,770
2016	Smallmouth Bass	Juvenile	300
2017	Walleye	Large Fingerling	9,500
2019	Walleye	Small Fingerling	12,240
2023	Walleye	Juvenile	10,000
2024	Walleye	Juvenile	30,253
