

## Lake Cavour Survey Summary

Lake Cavour, located 3 miles north of Cavour, SD, is managed as a saugeye and black crappie fishery; other fish species (e.g., black bullhead, northern pike, walleye, white crappie, and yellow perch) provide additional angler opportunity.

- **Saugeye.** Saugeye catches increased substantially in 2024 (19.8 fish per gill net) resulting in the highest abundance in the region. Relative abundance was well above the previous year and long-term mean (1.0 and 5.2 fish per net, respectively). All saugeye sampled originated from a fry stocking event the previous year. They grew extremely fast averaging 14.5 inches in length by age 1. Saugeye typically don't achieve this length until they reach three years of age in South Dakota. Lake Cavour is likely an excellent option for any angler targeting saugeye in the region.
- **Black/white crappie.** Frame netting efforts produced 0.5 black and 4.8 white crappie per net in 2024. Relative abundance increased from the previous sample year (2022) for both species (0.2 and 0.0 fish per net for black and white crappie, respectively). Black crappie lengths ranged from 8.9 to 9.0 inches while white crappie lengths ranged from 7.9 to 11.4 inches. Most of these fish likely originated from a stocking of East Vermillion crappies in the spring of 2024. High condition scores for both species ( $Wr = 122$  for black and  $115$  for white crappie) indicates they are healthy and adjusting well to their new environment.

For more detailed results see the computer-generated South Dakota Statewide Fisheries Survey for Lake Cavour (below).

# SOUTH DAKOTA STATEWIDE FISHERIES SURVEY

Cavour, Beadle County

MJA-Lake-532-000

2024

## Lake Information

**Name:** Cavour **Maximum Depth:** 14 Feet  
**County:** Beadle **Mean Depth:** 4 Feet  
**Legal Description:** T111N- R60W-Sec. 20-22  
**Surface Area:** 528 Acres

## Surveys and Investigations

Survey methods used by gear type, date, and effort.

Gear	Date	Effort
AFS std gill net	Aug 13, 2024	6 net-nights
frame net (std 3/4 in)	Aug 13, 2024	4 net-nights

## **Common Fish Species Present**

Walleye

Saugeye

Bigmouth Buffalo

Black Bullhead

White Crappie

White Sucker

Black Crappie

Northern Pike

Common Carp

---

## Terminology

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

A statewide effort to help make netting efforts comparable to all waters sampled across the state, occurred in 2017, with a switch to American Fisheries Society gill nets. Past gill netting efforts were completed with different style/types of nets and are not comparable side by side.

- **AFS std gill net** – 80 ft experimental gill net containing eight panels (10 ft each) of varying monofilament meshes of 0.75, 1.00, 1.25, 1.50, 1.75, 2.00, 2.25 and 2.50 inches.
- **std experimental gill net for non-Missouri River waters** - 150 ft experimental gill net containing six panels (25 ft each) of varying monofilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.
- **std experimental gill net for Missouri River reservoirs** – 300 ft experimental gill net containing six panels (50 ft each) of varying multifilament meshes of 0.5, 0.75, 1.00, 1.25, 1.50 and 2.00 inches.

$$CPUE = \frac{\text{number of fish}}{\text{effort}}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left( \frac{\text{number of fish} \geq \text{quality length}}{\text{number of fish} \geq \text{stock length}} \right) \times 100$$

$$PSD - P = \left( \frac{\text{number of fish} \geq \text{preferred length}}{\text{number of fish} \geq \text{stock length}} \right) \times 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (**W**) compared to a length-specific standard weight (**Ws**) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left( \frac{W}{W_s} \right) \times 100$$

Confidence intervals (CI) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (S), quality (Q), preferred (P), memorable (M) and trophy (T). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

Species Name	Stock		Quality		Preferred		Memorable		Trophy	
	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)	(in)	(cm)
Black Bullhead	6	15	9	23	12	30	15	38	18	46
Black Crappie	5	13	8	20	10	25	12	30	15	38
Bluegill	3	8	6	15	8	20	10	25	12	30

Yellow Perch	5	13	8	20	10	25	12	30	15	38

## Catch Summary of Stock Length Fish

Catch per unit effort (CPUE), proportional size distribution (PSD), proportional size distribution of preferred length fish (PSD-P), and relative weight (Wr) for species sampled in survey with 80% confidence interval (CI-80).

\* **Methods/Species that ignore stock length**

Gear	Species	Sample Size (n)	Abundance		Stock Density Indices			Condition	
			CPUE	CI-80	PSD	CI-80	PSD-P	CI-80	Wr
AFS std gill net	Bigmouth Buffalo	94	15.5	5.5	1		1		
	Black Bullhead	53	8.8	3.1	81	8	4		
	Common Carp	59	0.2	0.2	0		0		
	Saugeye	119	19.8	5.9	89	4	0	95	1
	White Sucker	2	0.3	0.3	100		100		
frame net (std 3/4 in)	Bigmouth Buffalo	8	2.0	1.5	63		50		
	Black Bullhead	20	5.0	2.1	85		0		
	Black Crappie	2	0.5	0.8	100		0	122	1
	Common Carp	75	0.3	0.4	100		100		
	Northern Pike	1	0.3	0.4	100		100	96	
	Saugeye	30	7.5	6.8	77	12	0	99	2
	White Crappie	19	4.8	2.2	100		11	115	5
	White Sucker	17	4.3	3.7	100		100		

## 10-Year Catch Per Unit Effort by Gear and Species

Catch per unit effort (CPUE) and average (Avg) of species across 10 years using different gear types.

\* Methods/Species that ignore stock length

Gear	Species	CPUE										Avg	
		2015	2016	2017	2018	2019	2020	2021	2022	2023	2024

## Length at Capture

Mean length at capture by age across years sampled, sample size (N).

Species: Saugeye

Mean Length (expanded sample number) at capture by age											
Year	N	1	2	3	4	5	6	7	8	9	10+
2024	119	368 (119)									
2022	4	318 (4)									

Species: Walleye

Mean Length (expanded sample number) at capture by age											
Year	N	1	2	3	4	5	6	7	8	9	10+
2022	7		405 (7)								

## **Fish Condition**

Mean relative weight (Wr) by sample size (N), length category stock to quality (S-Q), quality to preferred (Q-P), preferred to memorable (P-M), and memorable (M) for species collected across survey years with standard error (SE).

Species	Year	Length Groups							
		S-Q		Q-P		P-M		M	
		N	Wr (SE)	N	Wr (SE)	N	Wr (SE)	N	Wr (SE)
Black Crappie Frame Net	2022	1	123	0		0		0	
	2024	0		2	122 (0.6)	0		0	
Saugeye Gill Net	2022	4	96 (3.2)	0		0		0	
	2024	13	97 (3.4)	106	95 (0.7)	0		0	
Walleye Gill Net	2022	0		7	94 (1.2)	0		0	
White Crappie Frame Net	2024	0		17	116 (3.9)	2	108 (6.2)	0	

## Length Frequency Distribution

Length frequency histogram of species sampled by year.

Species: Black Bullhead  
Gear: AFS std gill net

Species: Common Carp  
Gear: AFS std gill net

Species: Saugeye  
Gear: AFS std gill net

Species: White Crappie  
Gear: frame net (std 3/4 in)

## Historic Fish Sizes and Relative Abundance

Size distribution per net by color for species sampled by year.

Species: Black Bullhead  
Gear: AFS std gill net

Species: Black Bullhead  
Gear: std exp gill net

Species: Black Crappie  
Gear: frame net (std 3/4 in)

Species: Common Carp  
Gear: AFS std gill net

Species: Common Carp  
Gear: std exp gill net

Species: Northern Pike  
Gear: std exp gill net

Species: Saugeye

Species: Walleye  
Gear: AFS std gill net

Species: Walleye  
Gear: std exp gill net

Species: White Crappie  
Gear: frame net (std 3/4 in)

Species: White Sucker  
Gear: AFS std gill net

Species: White Sucker  
Gear: std exp gill net

## **Fish Stocking**

Number of fish stocked by year, species, and size.

Year	Species	Size	Number
2014	Walleye	Fry	115,000
2015	Walleye	Small Fingerling	27,920
2017	Walleye	Fingerling	44,840
2019	Walleye	Fry	550,000
2020	Black Crappie	Fingerling	77,227
2021	Saugeye	Juvenile	38,130
2023	Saugeye	Fry	500,000
2024	Black Crappie	Adult	300
2024	White Crappie		350
