#### SOUTH DAKOTA STATEWIDE FISHERIES SURVEY McCook, Union County LCL-Lake-5-000

2015

#### Lake Information

| Name:              | McCook                              | Maximum Depth:  | 14 Feet |
|--------------------|-------------------------------------|-----------------|---------|
| County:            | Union                               | Mean Depth:     | 6 Feet  |
| Legal Description: | T89N-R48W-Sec 4, 9-10, 15-16,<br>21 | OHWM Elevation: | 1,091   |
| Surface Area:      | 297 Acres                           |                 |         |

#### Surveys and Investigations

Survey methods used by gear type, date, and effort.

| Gear                     | Date          | Effort       |  |
|--------------------------|---------------|--------------|--|
| std exp gill net         | July 30, 2015 | 2 net-nights |  |
| std frame net (3/8 inch) | July 30, 2015 | 5 net-nights |  |

## **Common Fish Species Present**

Walleye White Crappie Channel Catfish Black Crappie Freshwater Drum Gizzard Shad Bluegill Common Carp Smallmouth Buffalo Yellow Perch

#### **Terminology**

Catch per unit effort (**CPUE**) refers to the relative abundance of a species. It is defined as the number of fish captured per unit of effort (i.e., number of fish captured per net-night or number of fish captured per hour electrofishing). In this report CPUE is typically given for only stock-length fish (see length categories table for stock lengths).

$$CPUE = \frac{number \ off ish}{effort}$$

Population size structure is quantified using the indices proportional size distribution of quality-length fish (**PSD**) and proportional size distribution of preferred-length fish (**PSD-P**). These indices indicate the proportion of stock-length fish that are equal to or greater than a given length. Minimum lengths for stock, quality and preferred length fish are given in the length categories table.

$$PSD = \left(\frac{number \, offish \ge quality \, length}{number \, of \, fish \ge stock \, length}\right) \ge 100$$

$$PSD - P = \left(\frac{number \ offish \ge preferred \ length}{number \ of \ fish \ge stock \ length}\right) \ge 100$$

Relative weight (**Wr**) is used to quantify fish plumpness. Relative weight is the ratio of what a fish weighs (W) compared to a length-specific standard weight (Ws) multiplied by 100. Relative weight values of 95-105 are commonly cited as optimum values, but values in the 80s are common during summer sampling in South Dakota.

$$Wr = \left(\frac{W}{Ws}\right) \ge 100$$

Confidence intervals (**CI**) are provided for many of the estimates calculated in this report. The confidence interval provides a range in which the true mean is expected to fall. For example, with an 80% CI we are 80% confident that the interval contains the true value.

Length categories include stock (**S**), quality (**Q**), preferred (**P**), memorable (**M**) and trophy (**T**). Length categories for most species have been defined based on a percentage of the world record length for that species. Some species mentioned in this report do not have defined length categories. Length categories for species used in this report are provided in the following table. Measurements are the minimum total length for each category and are reported in inches (in) and centimeters (cm).

### **Fish Condition**

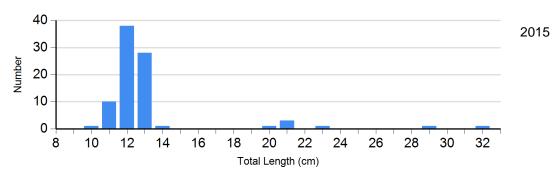

Mean relative weight (Wr) by sample size (N), length category stock to quality (S-Q), quality to preferred (Q-P), preferred to memorable (P-M), and memorable (M) for species collected across survey years with standard error (SE).

#### Length Frequency Distribution

Length frequency histogram of species sampled by year.

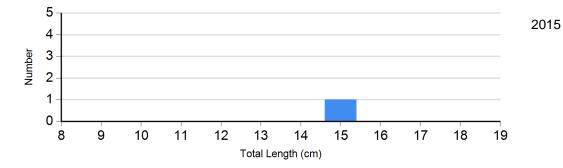

Species: Black Crappie Gear: std frame net (3/8 inch)

Species: Walleye Gear: std exp gill net

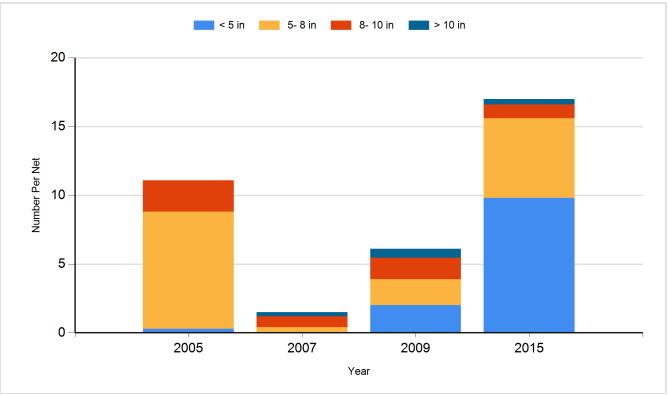

Species: Yellow Perch Gear: std exp gill net

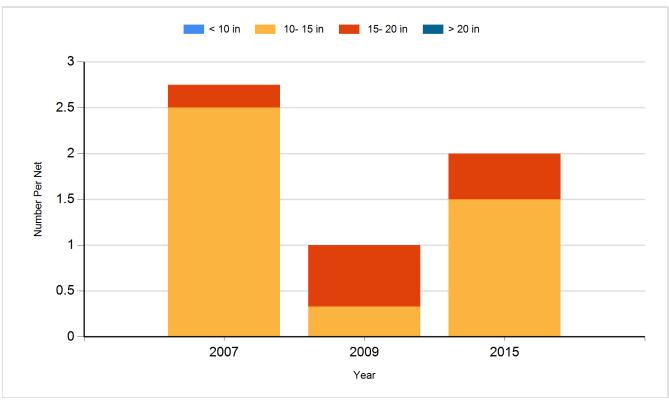

#### **Historic Fish Sizes and Relative Abundance**

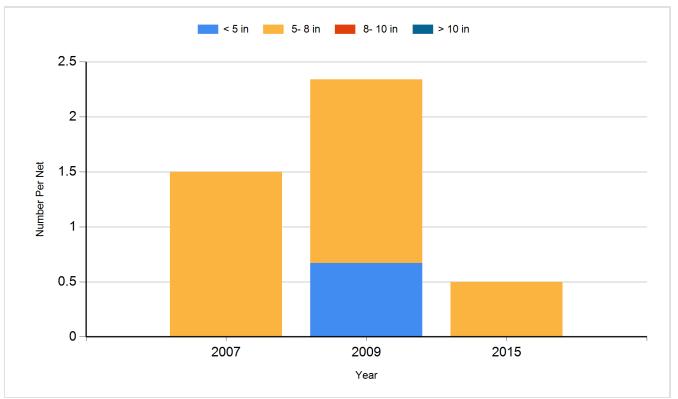

Size distribution per net by color for species sampled by year.

Species: Walleye Gear: Gill Net

# Fish Stocking

Number of fish stocked by year, species, and size.

| Year | Species | Size             | Number  |
|------|---------|------------------|---------|
| 2012 | Walleye | Small Fingerling | 55,600  |
| 2013 | Walleye | Small Fingerling | 30,014  |
| 2014 | Walleye | Fry              | 337,000 |
| 2015 | Walleye | Fingerling       | 13,497  |
