320E1050	Class E Asphalt Concrete	18,063.7	Ton

SURFACING THICKNESS DIMENSIONS

The plans shown spread rates will be applied even though the thickness may vary from that shown in the plans.

At those locations where material must be placed to achieve a required elevation, the depth/quantity may be varied to achieve the required elevation.

UTILITIES

The Contractor will contact the involved utility companies through South Dakota One Call (1-800-781-7474) prior to starting work. It will be the responsibility of the Contractor to coordinate work with the utility owners to avoid damage to existing facilities.

If utilities are identified near the improvement area through the SD One Call Process as required by South Dakota Codified Law 49-7A and Administrative Rule Article 20:25, the Contractor will contact the Engineer to determine modifications that will be necessary to avoid utility impacts.

TYPE III FIELD LABORATORY

Substitution of a cellular telephone for the hard-wired touch-tone telephone is not allowed, as state personnel need the ability to download information over direct phone lines. The phone is intended for state personnel usage only. Contractor personnel are prohibited from using this phone unless preapproved by the Project Engineer. Reimbursement will not be made for fees associated with the purchase, installation, disconnection, monthly line charges, and incidentals involved in the installation, maintenance, and disconnection of the phone (including attachments). These items will be incidental to the contract unit price per each for "Type III Field Laboratory".

COLD MILLING ASPHALT CONCRETE

The Los Angeles Abrasion Loss value on the aggregate used for the inplace asphalt concrete was 18. This value was obtained from testing during construction of the in-place asphalt concrete.

Cold milling asphalt concrete will be done according to the typical section(s). In areas where maintenance patches have raised and/or widened the road, additional asphalt concrete will be milled to provide a uniform typical section from centerline to the edge of the finished shoulder. These areas also include farm, residential, field entrances and intersecting roads. Milling will be daylighted to the outside edge of the roadway. Any additional costs associated with this additional cold milling will be incidental to the contract unit price per square yard for Cold Milling Asphalt Concrete.

Cold milling asphalt is estimated to produce 1110.6 tons of cold milled asphalt concrete material. The cold milling operation will be 36.5' wide from Sta. 1249+75 to Sta. 1303+00, estimated quantity of cold milling equals 21,595.8 Sq.Yds.

on the project.

SALVAGE AND STOCKPILE GRANULAR MATERIAL

An estimated 1,139.7 tons 603.1 Cubic Yards) of granular material will be salvaged from the existing highway at the beginning/end of surfacing sections and the bridge ends and stockpiled at a site furnished by the Contractor and satisfactory to the Engineer. Salvaged granular material will be reused as Base Course, Salvaged on this project.

Salvaged material will be processed to meet the requirements of Section 884.2 D.2 prior to stockpiling. The Contractor will ensure that no vegetation, topsoil, subgrade, or other foreign material is incorporated into the salvaged granular material.

The salvaged material not used on the project will be stockpiled or disposed of as directed by the Engineer.

The quantity of salvaged granular base material may vary from the plans.

Table for Salvage and Stockpile Granular Base Material

TRANSITION SECTION

The existing granular material will be shaped to allow for the placement of asphalt concrete.

Cost for the shaping which includes removing and placing the existing granular material, adding granular material if needed and compacting the granular material will be incidental to the contract unit price per ton for Salvage and Stockpile Granular Base Material.

Table for Salvage and Stockpile Granular Base Material

	Granular	Depth of Asphalt
Location	Removal Depth	Concrete
	(Inches)	(Inches)
Sta. 21+00.0 to Sta. 23+40.0	4.5" to 0"	4.5"
Sta. 45+69.4 to Sta. 48+09.4	1.5" to 6"	6"

UNCLASSIFIED EXCAVATION, DIGOUTS

The locations and extent of digout areas will be determined in the field by the Engineer.

Included in the Estimate of Quantities are 50 cubic yards of Unclassified Excavation. Digouts per mile for the removal of unstable material throughout the project. Estimated quantity = 164 cu.yds.

Included in the Estimate of Quantities is 100 tons of Base Course per mile for backfill of Unclassified Excavation, Digouts. Estimated quantity = 328.8 tons of Base Course or Base Course Salvaged and 3.9 MGal of Water for Granular Material

Table for Unclassified Excavation, Digouts and Backfill of Digouts

Location	Length (miles)
Sta. 21+00.0 to Sta. 48+09.4	0.513
Sta. 51+19.9 to Sta. 83+00.0	0.602
Sta. 1249+75.0 to Sta.1344+68.5	1.798
Sta. 1347+22.4 to Sta. 1367+00.0	0.375
TOTAL =	3.288

Included in the Estimate of Quantities is 75 square vards of Remove Asphalt Concrete Pavement for the removal of unstable asphalt for Section 3.

Included in the Estimate of Quantities is 25 tons of Asphalt Concrete Composite for the backfill of Unclassified Excavation, Digouts for Section 3.

Table for Remove Asphalt Concrete and Asphalt Concrete Backfill

Location	Length (miles)
Sta. 1249+75.0 to Sta. 1303+00.0	1.009

The digouts will be extended through the shoulder and backfilled with granular material that will daylight to the inslope to allow water to escape the subsurface.

SURFACE PREPARATION

Prior to placement of the Class E Asphalt Concrete, the Contractor will be required to prepare the existing surface according to the Surface Preparation specifications provided in Section 210, at locations determined by the Engineer.

The locations provided on the typical sections for Asphalt Surface Treatment, In Place, represent the locations where an asphalt surface treatment is anticipated to be in place at the time of construction. The Contractor is advised that locations and dimensions of actual Asphalt Surface Treatment, In Place, may vary from that given on the typical sections. There will be no increase in the payment for Surface Preparation based on the actual surface treatment in place at the time of construction.

Quantities for Surface Preparation have been provided for the entire length of the asphalt surfacing. Actual limits to receive Surface Preparation ahead of Class E Asphalt Concrete placement will be limited to particular project conditions and will be subject to approval by the Engineer. In no case will Surface Preparation operations ahead of Class E Asphalt Concrete placement operations exceed fourteen calendar days.

Included in the Estimate of Quantities is 144.4 MGal of Water for Granular Material for compaction during the Surface Preparation operation.

Table for Surface Preparation

Location	Length (miles)
Sta. 21+00.0 to Sta. 48+09.4	0.513
Sta. 51+19.9 to Sta. 83+00.0	0.602
Sta. 1303+00.0 to Sta.1344+68.5	0.789
Sta. 1347+22.4 to Sta. 1367+00.0	0.375
TOTAL =	2.279

EXISTING ASPHALT CONCRETE REPAIR QUANTITIES

Included in the Estimate of Quantities are 100 tons of Class E Asphalt Concrete, 1.0 tons of Hydrated Lime, 5.8 tons of PG 58-34 Asphalt Binder per mile for Alt A and 100 tons of Class E Asphalt Concrete, 1.0 ton of Hydrated Lime, and 5.0 tons of PG 58-34 Asphalt Binder per mile for Alt. B for spot leveling, strengthening, and repair of the existing surface for Section 3 (Sta. 1249+75.0 to Sta. 1303+00.0). Estimated length = 1.009 miles.

Included in the Estimate of Quantities is 0.3 tons of SS-1h or CSS-1h Emulsified Asphalt for Tack (Rate = 0.06 Gal./Sg.Yd.) for repair and leveling areas for Section 3 (Sta. 1249+75.0 to Sta. 1303+00.0).

CHECKING SPREAD RATES

The Contractor will be responsible for checking the Class E Asphalt Concrete, Base Course and Base Course, Salvaged spread rates and taking the weigh delivery tickets as the surfacing material arrives on the project and is placed onto the roadway.

The Contractor will compute the required spread rates for each typical surfacing section and create a spread chart prior to the start of material delivery and placement. The Engineer will review and check the Contractor's calculations and spread charts. The station to station spread will be written on each ticket as the surfacing material is delivered to the roadway.

- by',
- quantity is correct.

All daily tickets and the summary by item will be given to the Engineer no later than the following morning.

If the checker is not properly and accurately performing the required duties, the Contractor will correct the problem or replace the checker with an individual capable of performing the duties to the satisfaction of the Engineer. Failure to do so will result in suspension of the work.

The Department will perform depth checks. The Contractor will be responsible for placement of material to the correct depth unless otherwise directed by the Engineer. If the placed material is not within a tolerance of $\pm 1/2$ inch of the plan shown depth, the Contractor will correct the problem at no additional cost to the Department. Excess material above the tolerance will not be paid for. Achieving the correct depth may require picking up and moving material or other action as required by the Engineer. All costs for providing the Contractor furnished checker and performing all related duties will be incidental to the contract lump sum price for the CHECKER. No allowances will be made to the contract lump sum price for CHECKER due to authorized quantity variations unless the quantities for the material being checked vary above or below the estimated quantities by more than 25 percent. Payment for the Checker will then be increased or decreased by the same proportion as the placed material quantity bears to the estimated material quantity.

STATE OF	PROJECT	SHEET	TOTAL
SOUTH DAKOTA	NH 0012(298)106	F3	F36

At the end of each day's shift, the Contractor will verify the following:

• All tickets are present and accounted for,

• The quantity summary for each item is calculated,

The amount of material wasted if any,

Each day's ticket summary is marked with the corresponding 'computed

• The ticket summary is initialed and certified that the delivered and placed

BASE COURSE, SALVAGED

Base Course, Salvaged will be obtained from the stockpile site(s) provided by the Contractor from the salvaged material produced on this project and may be used without further gradation testing.

All other requirements for Base Course, Salvaged will apply.

CLASS E ASPHALT CONCRETE

Mineral Aggregate for Class E Asphalt Concrete - Alternate A will conform to the requirements for Class E, Type 1.

Mineral Aggregate for Class E Asphalt Concrete - Alternate B will consist of a minimum of eighty percent crushed limestone ledge rock and will conform to the requirements for Class E, Type 1.

When directed by the Engineer, the Contractor will saw and remove a total of three undamaged compaction cores (4" dia. min.) per asphalt concrete lift from designated area(s) and repair the hole(s) to the satisfaction of the Engineer. All costs associated with the compaction cores will be incidental to the contract unit price per each for Compaction Sample.

All other requirements for Class E will apply.

GRIND RUMBLE STRIPS IN ASPHALT CONCRETE

Asphalt concrete rumble strips will be constructed on the shoulders. Rumble strips will be paid for at the contract unit price per mile for Grind 12" Rumble Strip or Stripe in Asphalt Concrete. It is estimated that 5.4 miles of asphalt concrete rumble strips will be required.

ASPHALT CONCRETE RUMBLE STRIP

Location	* Rumble Strip Length
	Mile
US 12	
Sta. 21+00.0 to Sta. 48+09.4	1.0
Sta. 51+19.9 to Sta. 83+00.0	1.2
Sta. 1249+75.0 to a Sta. 1270+95.0	0.8
Sta. 1300+49.0 to a Sta. 1344+68.5	1.6
Sta. 1347+22.4 to a Sta. 1367+00.0	0.8
TOTALS:	5.4

* Length includes both shoulders

Rumble strip installation will be completed prior to application of the flush seal and permanent pavement markings. In the event the flush seal is eliminated from the contract, the Contractor will still be required to apply a flush seal to the newly installed 12" rumble strips at a width of 18" and at the same rate as specified in this plan set. No adjustment in payment will be made and SS-1h or CSS-1h Asphalt for Flush Seal will be paid at the contract unit price per ton.

BLOTTING SAND FOR PRIME

Included in the Estimate of Quantities are 5 tons of Blotting Sand for Prime to be used where necessary for maintenance of traffic as directed by the Engineer, (Rate = 10 pounds per square yard).

FLUSH SEAL

Application of flush seal will be completed within 10 working days following completion of the asphalt concrete surfacing.

Application of flush seal may be eliminated by the Engineer. If the paved surface remains tight, the Engineer will notify the Contractor as soon as possible that the flush seal is unnecessary.

SAND FOR FLUSH SEAL

The sand application will be placed 11' wide in each lane, leaving 12" on center line and 6" on each edge line free of sand.

ASPHALT CONCRETE COMPOSITE

Section 324 will apply except that Class E Asphalt Concrete as specified elsewhere in the plans may be used as Asphalt Concrete Composite.

Plans specified locations for Asphalt Concrete Composite will be paid for at the contract unit price per ton for Asphalt Concrete Composite regardless of the class of asphalt concrete used at such locations.

INTERSECTING ROADS AND ENTRANCES

In areas where granular material has been placed adjacent to the existing asphalt concrete, the Contractor will be required to remove the granular material to a depth below the existing asphalt concrete to allow for the placement of the new asphalt concrete. New asphalt concrete will be placed flush with the existing asphalt concrete. The existing granular material removed may be placed on the entrances, intersecting roads or other locations as directed by the Engineer.

All costs to remove the granular material including labor, equipment and incidentals will be incidental to the various related contract items.

REINFORCED CONCRETE PIPE JOINT REPAIR AND VOID GROUTING

The Contractor will provide a notarized statement, from the Manufacturer, that the products used for culvert joint repair meet the specified requirements, along with the Manufacturer's current product specification and installation instructions.

The Contractor will be an Approved Contractor of the Manufacturer of the specified product and will provide written certification from the Manufacturer attesting to their Approved Contractor status.

All product documentation and Contractor submittals must be submitted to the Engineer prior to or at the preconstruction conference. The Contractor must have the Engineer's approval prior to commencing any of this work.

The Contractor will follow the Manufacturer's installation instructions and specifications throughout the repair process

Temperature of the specified products is critical from the point of pumping to the point of injection. All polyurethanes react faster at higher temperatures. Drum heaters and heated hoses are required when ambient or ground temperatures are below 70 degrees Fahrenheit. The optimum hose temperature will vary with the weather conditions and the particular job site conditions with the minimum hose temperature being 75 degrees Fahrenheit and the maximum hose temperature being 95 degrees Fahrenheit and the drum temperature not to exceed 90 degrees Fahrenheit.

The Contractor will provide worker and inspector safety protective gear in accordance with the manufacturer, including but not limited to chemical goggles, face shields, eye wash system and NBR gloves.

The Contractor will provide safe storage and handling of materials prior to delivery and at the project site. All material installation, handling and storage will be in accordance with the Manufacturer's recommendations.

The Contractor will visit the project to determine the extent of culvert joints to be cleaned and filled, prior to bidding.

Culvert Joint Cleaning and Repair Culvert Joint quantities will be based upon the following table showing circumference of joints based upon culvert size and shape.

Pipe	Round Pipe	Arch Pipe
Diameter	Circumference per Joint	Circumference per Joint
(In)	(Ft)	(Ft)
36	9.4	
42	11.0	11.0
48	12.6	
54	14.1	
60	15.7	
66	17.3	
72	18.8	19.0
78	20.4	
84	22.0	

Culvert Joint Cleaning

This work will consist of cleaning of the culvert joints, washing the entire culvert and joints with a high-pressure washer, and if needed, wire brush cleaning of each joint to be repaired as directed by the Engineer. The entire culvert will be clean and dry and most notably the specified joints will be thoroughly cleaned to the satisfaction of the Engineer using a power washer with water pressure of at least 2500 psi. The culvert must be in a clean condition so that no deleterious material is trapped in the joints that are being repaired. The Contractor will dispose of all debris removed from the culverts during the cleaning operation as approved by the Engineer.

All costs for equipment, material and labor for the culvert joint cleaning work will be incidental to the contract unit price per foot for Culvert Joint Cleaning. Culvert Pipe Cleaning will be measured to the nearest 0.1 foot of joint which is cleaned for joint repair.

Location	Size	Culvert Joint Cleaning

1259+88.7	Twin 48" RCP	* 176.4

* Includes both culverts.

Repair Culvert Joint

The culvert joints will be repaired in accordance with the Chemical Grout Manufacturer's directions to prevent future infiltration/exfiltration of soils and water and to keep the chemical grout from expanding back into the structure during injection.

roadway structure.

The Contractor will submit to the Engineer for approval a detailed procedure for the installation of the polyurethane grout.

The work will include, but is not limited to sealing each pipe joint with a hydrophilic polyurethane grout meeting the following specifications:

ULTRA (Single Component Grout for Joint Injection) as manufactured by Green Mountain International, LLC or equal.

Excess grout and oakum will be trimmed from the interior face of the joint prior to applying the UV Protection (Gel Coat). The epoxy gel coat compound will be as recommended by the Manufacturer for both surface sealing and protecting the hydrophilic grout from UV exposure. The epoxy gel compound will be mixed and handled in accordance with the Manufacturer's recommendations and will meet the following requirements:

Epoxy gel sealant compounds manufactured by Green Mountain Grouts, LLC or equal.

All costs for all equipment, material and labor required to complete the work will be incidental to the contract unit price per foot for Repair Culvert Joint. Completion of the work includes initial saturated oakum rope packing of each joint, follow up injection of grout into the back side of each joint, trimming the excess grout and oakum from the interior face of the joint, application of the epoxy gel coat and site clean-up. Payment will be made per 0.1 foot of culvert joint repaired.

Location

RCP, RC CMP, and	6 7 8	66 72 78	17.0 21.5 26.0	47 57 68

GENERAL NOTES:

Gabions at outlets of CMP and RCP will be placed under the end section a distance of 2 feet from the outlet end. For CMP end section installations, the upper fabric of the gabions will be modified to accommodate the metal end section as approved by the Engineer.

★ Gabion and type B drainage fabric quantities on this standard plate are based on standard gabion sizes D, E, and F as depicted on standard plate 720.01.

Type B drainage fabric will be placed under the gabions and around the exterior sides (perimeter) of the gabions as approved by the Engineer. The type B drainage fabric will be in conformance with Section 831 of the Specifications. Measurement and payment of the type B drainage fabric will be in conformance with Section 720 of the Specifications.
