#### SPECIFICATIONS

Standard Specifications for Roads and Bridges, 2015 Edition and Required Provisions, Supplemental Specifications, and Special Provisions as included in the Proposal.

#### **ENVIRONMENTAL COMMITMENTS**

An Environmental Commitment is a measure that SDDOT commits to implement in order to avoid, minimize, and/or mitigate a real or potential environmental impact. Environmental commitments to various agencies and the public have been made to secure approval of this project. An agency mentioned below with permitting authority can influence a project if perceived environmental impacts have not been adequately addressed. Unless otherwise designated, the Contractor's primary contact regarding matters associated with these commitments will be the Project Engineer. These environmental commitments are not subject to change without prior written approval from the SDDOT Environmental Office. The environmental commitments associated with this project are as follows:

#### COMMITMENT C: WATER SOURCE

The Contractor shall not withdraw water with equipment previously used outside the State of South Dakota without prior approval from the SDDOT Environmental Office. Thoroughly wash all construction equipment before entering South Dakota to reduce the risk of invasive species introduction into the project vicinity.

The Contractor shall not withdraw water directly from streams of the James, Big Sioux, and Vermillion watersheds without prior approval from the SDDOT Environmental Office.

#### Action Taken/Required:

The Contractor shall obtain the necessary permits from the regulatory agencies such as the Department of Environment and Natural Resources (DENR) and the United States Army Corps of Engineers (COE) prior to executing water extraction activities.

#### **COMMITMENT E: STORM WATER**

Construction activities constitute less than 1 acre of disturbance.

#### Action Taken/Required:

At a minimum and regardless of project size, appropriate erosion and sediment control measures must be installed to control the discharge of pollutants from the construction site.

#### COMMITMENT H: WASTE DISPOSAL SITE

The Contractor shall furnish a site(s) for the disposal of construction and/or demolition debris generated by this project.

STATE OF	PROJECT	SHEET	TOTAL SHEETS
SOUTH DAKOTA	P SRTS (34)	2	48

#### **Action Taken/Required:**

REV 01/22/16 MDN

Construction and/or demolition debris may not be disposed of within the State ROW.

The waste disposal site(s) shall be managed and reclaimed in accordance with the following from the General Permit for Highway, Road, and Railway Construction/Demolition Debris Disposal Under the South Dakota Waste Management Program issued by the Department of Environment and Natural Resources.

The waste disposal site(s) shall not be located in a wetland, within 200 feet of surface water, or in an area that adversely affects wildlife, recreation, aesthetic value of an area, or any threatened or endangered species, as approved by the Project Engineer.

If the waste disposal site(s) is located such that it is within view of any ROW, the following additional requirements shall apply:

- 1. Construction and/or demolition debris consisting of concrete, asphalt concrete, or other similar materials shall be buried in a trench completely separate from wood debris. The final cover over the construction and/or demolition debris shall consist of a minimum of 1 foot of soil capable of supporting vegetation. Waste disposal sites provided outside of the State ROW shall be seeded in accordance with Natural Resources Conservation Service recommendations. The seeding recommendations may be obtained through the appropriate County NRCS Office. The Contractor shall control the access to waste disposal sites not within the State ROW through the use of fences, gates, and placement of a sign or signs at the entrance to the site stating "No Dumping Allowed".
- 2. Concrete and asphalt concrete debris may be stockpiled within view of the ROW for a period of time not to exceed the duration of the project. Prior to project completion, the waste shall be removed from view of the ROW or buried and the waste disposal site reclaimed as noted above.

The above requirements will not apply to waste disposal sites that are covered by an individual solid waste permit as specified in SDCL 34A-6-58, SDCL 34A-6-1.13, and ARSD 74:27:10:06.

Failure to comply with the requirements stated above may result in civil penalties in accordance with South Dakota Solid Waste Law, SDCL 34A-6-1.31.

All costs associated with furnishing waste disposal site(s), disposing of waste, maintaining control of access (fence, gates, and signs), and reclamation of the waste disposal site(s) shall be incidental to the various contract items.

## COMMITMENT I: HISTORICAL PRESERVATION OFFICE CLEARANCES

This project is environmentally classified as a CE1.

#### **Action Taken/Required:**

All earth disturbing activities not designated within the plans require review of cultural resources impacts. This work includes, but is not limited to: staging areas, borrow sites, waste disposal sites, and all material processing sites.

The Contractor shall arrange and pay for a cultural resource survey and/or records search. The Contractor has the option to contact the state Archaeological Research Center (ARC) at 605-394-1936 or another qualified archaeologist, to obtain either a records search or a cultural resources survey. A record search might be sufficient for review; however, a cultural resources survey may need to be conducted by a qualified archaeologist.

The Contractor shall provide ARC with the following: a topographical map or aerial view on which the site is clearly outlined, site dimensions, project number, and PCN. If applicable, provide evidence that the site has been previously disturbed by farming, mining, or construction activities with a landowner statement that artifacts have not been found on the site.

The Contractor shall submit the records search or cultural resources survey report and if the location of the site is within the current geographical or historic boundaries of any South Dakota reservation to SDDOT Environmental Engineer, 700 East Broadway Avenue, Pierre, SD 57501-2586 (605-773-3180). SDDOT will submit the information to the appropriate SHPO/THPO. Allow **30 Days** from the date this information is submitted to the Environmental Engineer for SHPO/THPO review.

If evidence for cultural resources is uncovered during project construction activities, then such activities shall cease and the Project Engineer shall be immediately notified. The Project Engineer will contact the SDDOT Environmental Engineer in order to determine an appropriate course of action.

SHPO/THPO review does not relieve the Contractor of the responsibility for obtaining any additional permits and clearances for staging areas, borrow sites, waste disposal sites, or material processing sites that affect wetlands, threatened and endangered species, or waterways. The Contractor shall provide the required permits and clearances to the Project Engineer at the preconstruction meeting.

SONAL ENGINEES

KIM LaRUE

#### **GRADING OPERATIONS**

Water for Embankment is estimated at the rate of 10 gallons of water per cubic yard of Embankment minus Waste. No separate payment will be made for the Water for Embankment and all costs associated shall be incidental to the contract unit price per cubic yard of "Unclassified Excavation".

#### **UTILITIES**

The Contractor shall be aware that the existing utilities shown in the plans were surveyed prior to the design of this project and might have been relocated or replaced by a new utility facility prior to construction of this project, might be relocated or replaced by a new utility facility during the construction of this project, or might not require adjustment and may remain in its current location. The Contractor shall contact each utility owner and confirm the status of all existing and new utility facilities. The utility contact information is providedK

#### **CLEARING**

Before clearing activities begin, the Contractor shall contact the Engineer to determine the limits of clearing for the project. If the trees or shrubs that are supposed to remain within the limits of work are damaged or destroyed by the Contractor, the Contractor shall replace them with the same size and type at the Contractor's expense.

#### **CLEAR AND GRUB STUMP**

The Contractor shall remove the stumps in the table below. All costs to completely remove and dispose of each stump shall be incidental to the contract unit price per each for "Clear and Grub Stump".

If additions or reductions to the number of stumps removed are ordered by the Engineer, payment shall be made at the contract unit price per each for "Clear and Grub Stump."

#### TABLE OF UNCLASSIFIED EXCAVATION

		(CuYd)
Excavation		98
Topsoil	_	215
	Total:	313

### PROCEDURES FOR DETERMINING UNCLASSIFIED EXCAVATION QUANTITY

Plans quantity shall be the basis of payment for Unclassified Excavation.

The Topsoil quantity in the Table of Unclassified Excavation is an estimate. The quantity of Topsoil from the cuts will be paid for twice as Unclassified Excavation, as it will be in both the Excavation and Topsoil quantities. This will be full compensation for Excavation, which includes necessary undercutting to provide space for placement of topsoil.

The Excavation quantities from individual balances and the Table of Unclassified Excavation have been reduced by the volume of in place surfacing that will be removed.

Excavation quantities for Concrete Sidewalk have not been included in the Unclassified Excavation. Excavation for the concrete sidewalk shall be incidental to the sidewalk bid item.

#### **INCIDENTAL WORK, GRADING**

The following is a list of major items of Incidental Work:

- 1.) Curb Stop Sleeves: There are a number of curb stops located in the proposed concrete. These curb stops will be required to have a White 5" PVC sleeve installed around them and shall be adjusted to approximately 0.5" below finish concrete elevation. The contractor shall take care not to damage any existing curb stops.
- 2.) Mailboxes: It is not expected that any existing mailboxes will be affected, but if due to the Contractors activities mailboxes are affected it shall be removed, safeguarded through construction, and reset at the correct height and location behind the curb and gutter following construction completion.

#### **SIDEWALK**

The foundation shall be excavated, shaped, and compacted to a firm, uniform bearing surface. Unsuitable foundation material shall be removed and replaced as directed. The foundation shall be thoroughly moistened immediately prior to placing concrete.

Concrete sidewalk will be paid for at the contract unit price per square foot.

Payment will be full compensation for excavation other than removal of existing sidewalk as provided for under Section 110 of the Specifications.

Payment will be full compensation for labor, equipment, tools, backfilling, furnishing and placing materials, including granular material, preformed expansion joint material and incidentals necessary, including disposal of excavation and discarded materials.

#### TYPE 1 DETECTABLE WARNINGS REV 08/01/16 MDN

Detectable warnings shall be in compliance with the Americans with Disability Act regulations.

The detectable warnings shall be installed according to the manufacturer's installation instructions.

A concrete thickness equal to the adjacent concrete sidewalk thickness and 2 inches of granular cushion material shall be placed below the Type 1 Detectable Warnings. When concrete is placed below the detectable warnings then the concrete thickness shall be transitioned at the rate of 1" per foot to match the adjacent concrete sidewalk thickness.

The detectable warnings shall be a brick red color for application in concrete curb ramps. Cast iron plates may be a natural patina (weathered steel).

When Type 1 Detectable Warnings are specified, the Contractor shall furnish and install only one of the products listed in the Type 1 Detectable Warnings table. Type 1 Detectable Warnings

The thickness will be approximately 4 inches within the right-of-way and 6 inches on temporary easements.

The estimated amount of topsoil to be placed is 215 CuYd.

<sup>\*\*</sup> Grade Staking Quantity = (Length) x (Lane Factor) x (Sets of Stakes)

#### **MYCORRHIZAL INOCULUM**

Mycorrhizal inoculum shall consist of mycorrhizal fungi spores and mycorrhizal fungi-infected root fragments in a solid carrier. The carrier may include organic materials, calcinated clay, or other materials consistent with application and good plant growth. The supplier shall provide certification of the fungal species claimed and the live propagule count. The inoculum shall include the following fungal species:

Glomus intraradices 25% Glomus aggregatu 25% Glomus mosseae 25% Glomus etunicatum 25%

All seed shall be inoculated by the seed supplier with a minimum of 20,000 live propagules of mycorrhizal fungi per 1,000 square feet. All costs of inoculating the seed shall be incidental to the contract unit price per pound for the corresponding permanent seed mixture.

The mycorrhizal inoculum shall be from the list below or an approved equal:

#### **FERTILIZING**

The Contractor shall apply an all-natural slow release fertilizer prior to seeding or placing sod. The all-natural fertilizer shall have a minimum guaranteed analysis of 4-6-4 and be USDA Certified BioBased. It should provide a minimum of 4% (N) nitrogen with a minimum water insoluble nitrogen (WIN) fraction of 3.2%, a minimum of 6% (P2O5) available phosphate, a minimum of 4% (K2O) soluble potash, and a maximum carbon to nitrogen ratio (C:N ratio) of 5:1. The all-natural fertilizer shall be free of weed-seed and pathogens accomplished through thermophilic composting, and not mechanical or chemical sterilization, to assure presence of beneficial soil microbiology. The fertilizer shall have a near neutral pH, a low salt index, a low biological oxygen demand, contain organic humic and fulvic acids, and have high aerobic organism counts. The fertilizer shall also be stable, free of bad odors, and be unattractive as a food source for animals. It should also be in a granular form that is easily spread.

The all-natural slow release fertilizer shall be applied according to the manufacturer's application recommendations.

The application rate is 34 pounds per 1,000 square feet.

The all-natural slow release fertilizer shall be from the list below or an approved equal:

#### **DRILLS**

In addition to the drills specified in Section 730 of the Specifications, other types of drills including no-till drills will be allowed as long as they have baffles, partitions, agitators, or augers which keep the seed distributed throughout the seed box and the seed is planted at a depth of  $\frac{1}{4}$ " to  $\frac{1}{2}$ ".

#### **PERMANENT SEEDING**

The areas to be seeded consist of all newly graded areas within the project limits except for the top of roadways and other surfacing.

Type D Permanent Seed Mixture shall consist of the following:

Grass Species	Variety	Pure Live Seed (PLS) (Pounds/1000 SqFt)
Kentucky Bluegrass	Avalanche, Appalachian, Wildhorse, Blue Bonnet	1.4
Perennial Ryegrass	Turf Type Varieties	1.4
Creeping Red Fescue	Epic, Boreal	1.4
Chewings Fescue	Ambrose, K2, VNS, Zodiac	1.4
Alkali Grass	Fults, Fults II, Quill, Salty	1.4
	Total:	7

#### **FIBER MULCHING**

Fiber mulch shall be applied in a separate operation following permanent seeding.

Fiber mulch shall be applied at the rate of 3000 pounds per acre.

The Contractor shall allow the fiber mulch to cure a minimum of 18 hours prior to watering or any storm event to ensure proper cohesion between the soil and fiber particles.

All costs for the additional tackifier added to the fiber mulch including labor, equipment, and materials shall be incidental to the contract unit price per pound for "Fiber Mulching".

The fiber mulch provided shall be from the approved product list. The approved product list for fiber mulch may be viewed at the following internet site:

http://sddot.com/business/certification/products/Default.aspx

#### HIGH FLOW SILT FENCE

REV 01/22/16 MDN

Quantity

The high flow silt fence fabric provided shall be from the approved product list. The approved product list for high flow silt fence may be viewed at the following internet site:

http://sddot.com/business/certification/products/Default.aspx

High flow silt fence shall be placed at the locations noted in the table and at locations that will minimize siltation of adjacent streams, lakes, dams, or drainage areas as determined by the Engineer during construction. Refer to Standard Plate 734.05 for details.

#### TABLE OF HIGH FLOW SILT FENCE

			Qualitity
Station	L/R	Location	(Ft)
4+82 to 5+01	R	Across Ditch	25
32+70 to 32+80	R	Across Drainage Channel	10
32+89 to 32+97	R	Across Drainage Channel	10
		Total:	45

#### **EROSION CONTROL BLANKET**

Erosion control blanket shall be installed at the locations noted in the table and at locations determined by the Engineer during construction.

The erosion control blanket provided shall be from the approved product list. The approved product list for erosion control blanket may be viewed at the following internet site:

#### http://sddot.com/business/certification/products/Default.aspx

The Contractor shall install erosion control blanket according to the manufacturer's installation instructions.

#### TABLE OF EROSION CONTROL BLANKET

					Quantity
Station to	Station	L/R	Location	Type	(SY)
4+82	5+02	R	Ditch	3	50
		To	tal Type 3 Erosion Co	ntrol Blanket:	50

#### **SHAPING FOR EROSION CONTROL BLANKET**

The ditches shall be shaped for the erosion control blanket as specified on Standard Plate 734.01.

#### SEDIMENT CONTROL AT INLETS WITH FRAMES AND GRATES

This type of sediment control device should be used where there is pavement in the vicinity of the drop inlets and storm water or sediment could possibly enter the frame and grate. Sediment Control at Inlets with Frame and Grates shall be installed prior to working in the vicinity of the drop inlets.

The Contractor shall be responsible for maintaining and repairing the sediment control devices for the duration of the project for which sediment control measures are required. Maintenance shall be scheduled to prevent storm water from backing up into the driving lane.

"Sediment Control at Inlets with Frames and Grates" will be paid for one time at each location, regardless of the number of times the sediment control devices are installed, inspected, cleaned, removed, repaired, or replaced. All costs associated with furnishing, installing, inspecting, maintaining, cleaning, sediment removal, and repairing Sediment Control at Inlets with Frames and Grates shall be incidental to the contract unit price per each for "Sediment Control at Inlet with Frame and Grate".

Sediment collection devices shall be:

A commercial made sediment collection device from the "Sediment Control at Inlet with Frame and Grate" list or an approved equal. The device shall be installed in reinforced concrete drop inlets according to the manufacturer's recommendations.

#### SEDIMENT FILTER BAG

REV 01/22/16 MDN

The sediment filter bags shall be the Snake Bag from Sacramento Bag Manufacturing Company or an approved equal.

#### Sediment Filter Bag

<u>Product</u> <u>Manufacturer</u>

Snake Bag Sacramento Bag Manufacturing Co.

Sacramento, CA

Phone: 1-800-287-2247 www.sacbag.com

The sediment filter bags shall be filled with clean aggregate 2" minus or

All costs for furnishing, installing, and removing the sediment filter bags shall be incidental to the contract unit price per foot for "Sediment Filter Bag."

#### **TABLE OF SEDIMENT FILTER BAGS**

	Quantity
Station	(Ft)
0+62 - 18.2' R	5
4+46 - 43.1' R	5
4+75 - 43.0' R	5
12+46 - 24.6' R	5
Total:	20

#### **STREET SWEEPING**

Vehicle tracking of sediment from the construction site shall be minimized. Street sweeping shall be used if erosion and sediment control best management practices are not adequate to prevent sediment from being tracked onto the street.

The Contractor shall use a pickup broom having integral self-contained storage to clean the roadway. The pickup broom used shall be a minimum of 6 feet wide and have working gutter brooms.

At a minimum, sweeping will be required:

- Prior to opening any sidewalk to pedestrian traffic or roadway to vehicular traffic.
- 2. At the end of each day in which sediment has been tracked into streets open to traffic

All costs for cleaning the roadway with a pickup broom shall be incidental to the contract unit price per hour for "Sweeping".

#### **CONCRETE WASHOUT FACILITY**

The Contractor shall install Concrete Washout Facilities as necessary for capture of all wasted concrete and washout water dumped at the construction site. Locations of Concrete Washout Facilities shall be coordinated with and approved by the Engineer during construction.

All costs for furnishing, installing, and maintaining the washout facility, as well as removal of concrete and washout facility shall be incidental to the contract unit price per each for "Concrete Washout Facility".

#### **PAVEMENT MARKING**

The pavement marking material shall be as defined in Section 983 of the Specifications.

#### **GROOVE PAVEMENT FOR PAVEMENT MARKING**

The Contractor should not use water for the grooving for pavement markings. If water is used, then there shall be adequate time for the concrete pavement to completely dry prior to the installation of pavement markings.

The Contractor shall establish a positive means for the removal of the grinding and/or grooving residue. The Contractor shall use a vacuum attachment to collect dust and residue created by the grooving of pavement. Solid residue shall be removed from the pavement surfaces before being blown by traffic action or wind. Residue shall not be permitted to flow across lanes being used by public traffic or into gutter or drainage facilities. Residue, whether in solid or slurry form, shall be disposed of in a manner that will prevent it from reaching any waterway in a concentrated state.

#### **SCOPE OF PERMANENT SIGN WORK**

The permanent sign work includes, but is not limited to, the following:

- A. Items to be removed by the Contractor:
  Existing Sign Posts
- B. Items to be removed, salvaged and reset by the Contractor: Existing permanent signs
- C. Items to be furnished and installed by the Contractor:

  Breakaway steel post sign supports with concrete footings
- D. Items installed as listed in the Sign Removal and Installation

#### REMOVE, SALVAGE, RELOCATE AND RESET PERMANENT SIGNS

The Contractor shall remove, salvage, relocate, and reset signs as indicated in the Sign Removal and Installation Table.

The Contractor shall replace in kind any signs, supports, support bases or related hardware lost or damaged during the time the signs were removed, salvaged, stockpiled and reset. Any replacement materials shall be in kind and at the Contractor's expense.

To complete the project sign work, resetting of signs shall be at their original location or as near as practicable to their original locations as completed project related work allows.

#### **SIGN POSTS**

The plan post lengths shall be field verified by the Contractor.

Breakaway anchor perforated tube post lengths listed in the Post Size/ Quantity columns of the SIGN INSTALLATION TABLE include 0.8' (9")/post minimum subgrade length.

Supports shall be cut to provide the proper sign height where necessary.

Perforated tube posts shall be fabricated from 12 gauge galvanized steel unless otherwise specified in the plans.

Post anchors shall be 48" long. Two-piece anchor post systems are required for 2" perforated tube post anchor stub posts. Heavy duty 7 gauge galvanized steel anchor stub posts that do not require stiffener sleeves are required for 2 ½" perforated tube post non slip base post installations.

All breakaway sign supports shall comply with NCHRP 350 or AASHTO Manual for Assessing Safety Hardware (MASH) crash-worthy requirements.

All sign support bases shall conform to Plate number 634.99.

Direct drive perforated tube post lengths listed in the Post Size/ Quantity columns of the Sign Installation table include the minimum 4'/post subgrade length.

SOUTH DAKOTA	P SRTS (34)	8	48

#### 1.5" RIGID CONDUIT, SCHEDULE 40

REV 01/22/16 MDN

SONAL ENGINEER

All conduit not located under permanent surfacing shall be 1.5" Rigid Conduit. Schedule 40.

Cost for all schedule 40 rigid conduit fittings, etc. shall be incidental to the contract unit price per foot for 1.5" Rigid Conduit, Schedule 40.

#### 1.5" RIGID CONDUIT, SCHEDULE 80

The Contractor shall bore the rigid conduit beneath asphalt concrete roadways, driveways, and sidewalks, and curb and gutter. Cost for boring shall be incidental to the contract unit price per Foot for 1.5" Rigid Conduit, Schedule 80.

Cost for all fittings, sweeps, etc. shall be incidental to the contract unit price per foot for 1.5" Rigid Conduit, Schedule 80.

#### 1.5" RIGID GALVANIZED STEEL CONDUIT

All conduit exposed above ground shall be Galvanized Rigid Steel.

Cost for all galvanized steel conduit fittings, etc. shall be incidental to the contract unit price per foot for 1.5" Galvanized Steel Conduit.

#### **POWER SOURCE**

MidAmerican Energy – Craig Van Meeteren 2103 Park Street Sheldon, Iowa 51201 (712) 277-7670

#### SIGNAL FLASHER UNIT

The Contractor shall furnish and install two flashing beacons. Both of the flashing beacons are located at the intersection of Highway 11 and E  $5^{\rm th}$  Street as shown in the plans

Warning beacons shall be flashing 12 inch round yellow light emitting diode (LED) signal modules. Warning beacons shall be compliant with the requirements for design, illumination, and color of signal sections required by Chapter 4L, Flashing Beacons, of the 2009 Manual of Uniform Traffic Control devices.

The 1 section vehicle signal heads shall be fabricated from ultraviolet stabilized polycarbonate with a yellow body with a black door and black tunnel visor.

Each flashing beacon shall have a 12" beacon (facing forward) and be mountable to a 2  $\frac{1}{2}$ " x 2  $\frac{1}{2}$ " tube post.

Each flashing beacon shall be installed on a 11' (0+89.2 – 23.70' R) and 11' (1+13.5 – 22.86' L), 2.5" x2.5" pole that is installed on a breakaway support. A 4.0', 1.25' diameter breakaway footing shall be installed.

#### **SIGNAL FLASHER UNIT (CONTINUED)**

The signal housing shall be constructed of polycarbonate material and must be adjustable independent from the bracket for lens alignment. The signal housing shall meet equipment standard of the Institute of Transportation Engineers Vehicle Traffic Control Signal Heads (VTCSH) Chapter 2. The lens shall be ITE compliant and ETL certified 12" yellow LED lens. The lens shall contain a maximum of 10 LEDs.

The flash rate shall be 60 flashes per minute.

The beacon shall flash at 50% duty cycle (0.5s on,0.5s off).

Beacons shall be programmable to the specification of the City of Alcester, SD

The beacon shall have automatic adjustable brightness and night dimming capability.

The beacon shall be activated by an integrated, programmable microcontroller. The beacon shall store 500 days of flash data. The software must allow for a minimum of seven distinct usage programs to allow for different usage variations. The usage program shall be uploaded by a laptop provided by the City of Alcester, running any of the following Microsoft Windows products: 7 or 8. The microcontroller shall have USB connecting capability to connect to the laptop.

The system shall be able to withstand and operate at temperature extremes of -40 deg F to +165 deg F.

The system should be designed and constructed to withstand 90 mph wind loads in conformance with the requirements of the AASHTO publication, "Standard Specifications for Structural Supports of Highway Signs, Luminaries, and Traffic Signals." Current edition.

The Signal Flasher Unit shall be housed in a 14 guage stainless steel NEMA 4X enclosure. The enclosure shall be painted ANSI 61 gray. A drip shield shall be provided over the door. The enclosure shall be the minimum size necessary to house the all components of the Signal Flasher Unit.

The product must be FCC certified to comply with all 47 CRF FCC Part 15 Subpart B Emissions requirements and Manufacturer must be ISO 9001 certified.

The beacon, including batteries, panels, and all components shall be guaranteed for a minimum of 3 years.

The software needed to program the flashing beacons must be provided to the City of Alcester, SD.

The services of a qualified technician to conduct on-site start-up operations and to instruct the Owner's personnel in system programming, operation, and maintenance shall be furnished.

The flashing beacons, (2) 11' 2.5" x 2.5" perforated tube posts, base, and pole footing along with labor, parts, software, and anything else needed for furnishing and installing the flashing beacons shall be paid at the contract unit price for each respective item.

#### **ELECTRICAL SERVICE DETAILS**

The Contractor shall provide a MidAmerican Energy approved 120 VAC lever-bypass meter socket, 5<sup>th</sup> jaw, where shown on the Plans. Contractor shall provide a 20 amp, service entrance rated, enclosed single pole circuit breaker on the load side of the meter where indicated as "Electrical Service Cabinet with Lock" in the details. The meter socket shall be mounted as shown in the details and shall not be mounted on MidAmerican Energy's Pole.

All costs for furnishing and installing all materials from the electrical service cabinet to the transformer, including labor, equipment, hookup fees, all items within the cabinet, post, concrete footing, post cap, meter socket, and incidentals shall be incidental to the contract unit price per each for "Electrical Service Cabinet."

# SIGN INSTALLATION

TYPICAL 48" WARNING SIGN ASSEMBLY WITH FLASHING BEACON

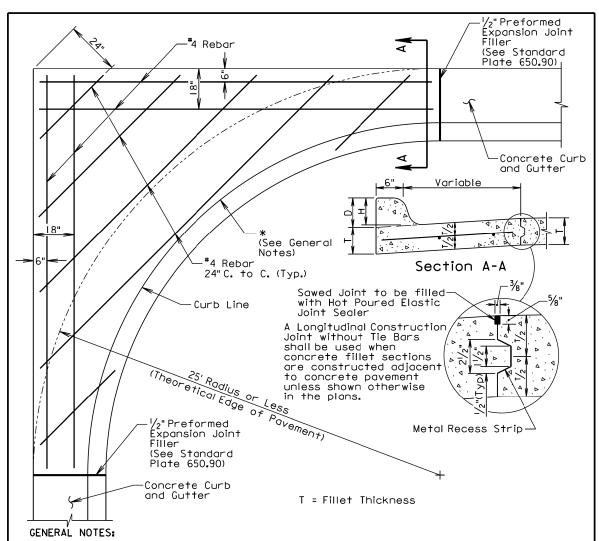

\* — Dimensions shown may vary by Manufacturer. The Contractor shall use Manufacturer recommended assembly parts and procedures. Sign installations must meet NCHRP 350 or MASH breakaway requirements and be FHWA approved.

#### GENERAL NOTES-

- I. Design Specification: AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminories and Traffic Signals, 4th Edition, with 2002, 2003, and 2004 Interims.
- 2. The manufacturer shall provide certification that the posts and hardware furnished have essentiall the same chemistry, mechanical properties and geometry as those used in the FHWA tests and will meet the FHWA change in velocity requirements.
- 3. The manufacturer shall provide certification that the breakaway system furnished will develop the full shear and bending yield strength of the sign post section being spliced.
- 4. All posts shall be galvanized in accordance with ASTM A653, Des. G-90.
- 5. All hardware shall be galvanized in accordance with ASTM A153.

# SINGLE PERFORATED TUBE POST BREAKAWAY SUPPORT WITH SLIPBASE AND CONCRETE FOOTING (Typical)

\* If a curb ramp is constructed adjacent to a PCC fillet section, the curb will need to be modified. Refer to the corresponding curb ramp standard plate or other special details in the plans for modification of the PCC fillet section.

Dimensions D, H, and T shall conform to those shown on the appropriate curb and gutter standard plate.

All rebar shall be in conformance with Sections 480 and 1010 of the Specifications. All rebar shall have a minimum of 3" clear cover.

Class M6 Concrete shall be used in construction of the fillets.

The concrete curb shall be monolithic with the concrete fillet. No separate payment for this curb will be made as the curb is considered a part of the fillet.

Joints shall be constructed at 10' intervals except when fillets are constructed adjacent to PCC Pavement. If there is adjacent PCC Pavement the joints shall be extended from edge of pavement through the fillet section as directed by the

The cost for all materials, labor, and incidentals necessary to construct the PCC fillet section with curb and gutter shall be incidental to the contract unit price per square yard for the corresponding PCC fillet section bid item. June 26, 2015

#### GENERAL NOTES:

#### ELEVATION

The concrete for the post footing shall be class M6 concrete.

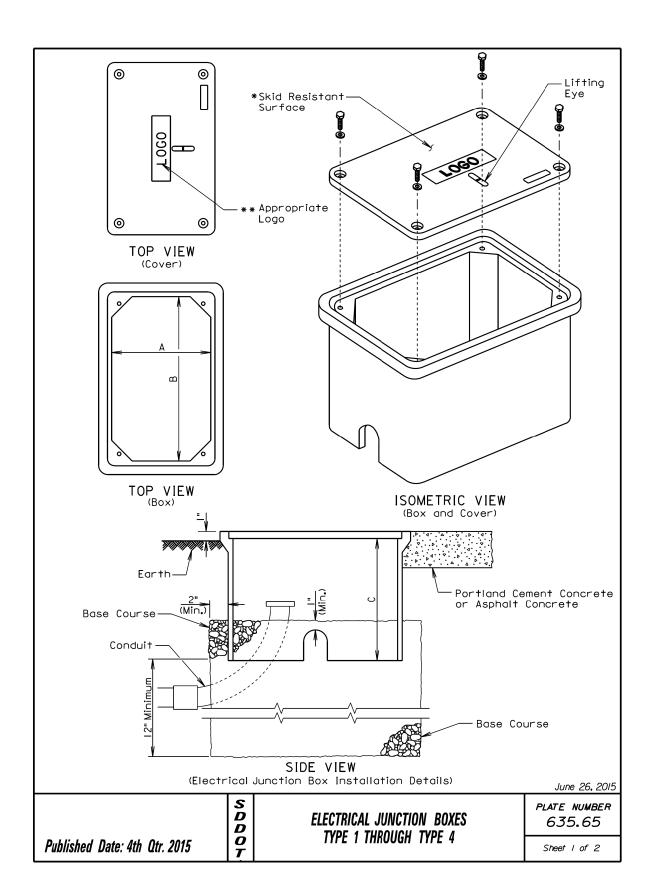

The 4" diameter galvanized steel utility post shall be 9' long and shall be in conformance with AASHTO Standard Specifications MI81. The post shall be Type I and either Grade I or Grade 2. The domed steel post cap shall be in conformance with AASHTO Standard Specifications MI81 and shall be Type I.

The Contractor shall contact and coordinate his/her work with the Utility Companies regarding hookup requirements, fees, materials, and equipment necessary.

Contractor shall install conduit and wire up to the utility pole. Utility company will supply pole, transformer and wiring from transformer to the base of the pole.

All costs for furnishing and installing all materials from the electrical service cabinet to the location indicated on the detail, including labor, equipment, hookup fees, all items withing the cabinet, post concrete footing, post cap, meter socket, conduit, and incidentals shall be incidental to the contract unit price per each for "Electrical Service Cabinet.

#### **GENERAL NOTES:**

For illustrative purpose only, type I detectable warnings are shown in the drawings.

The curb ramp depicted on this standard plate may be used with a PCC fillet section or curb and gutter. The curb ramp shall be placed at the location stated in the plans.

Sidewalk shall not be placed adjacent to the curb ramp flares when a 2' curb transition is used unless shown otherwise in the plans.

\*Care shall be taken to ensure a uniform grade on the curb ramp, free of sags and short grade changes.

Surface texture of the curb ramp shall be obtained by coarse brooming transverse to the slope of the curb ramp.

The normal gutter line profile shall be maintained through the area of the ramp opening.

Joints shall be sawed or tooled into the concrete adjacent to the detectable warnings to alleviate possible corner cracking.

Care shall be taken to ensure that the surface of the detectable warnings are clean and maintains a uniform color.

The detectable warnings shall be cut as necessary to fit the plan specified limits of the detectable warnings. Cost for cutting the detectable warnings shall be incidental to the corresponding detectable warning bid item.

There will be no separate payment for curb ramps. The curb ramp shall be measured and paid for at the contract unit price per square foot for the corresponding concrete sidewalk bid item. The square foot area of the detectable warnings shall be included in the measured and paid for quantity of sidewalk.

If rebar is placed in the Turning Space as depicted in DETAIL E, the cost of the materials, labor, and equipment to furnish and install the rebar shall be incidental to the contract unit price per square foot for the corresponding concrete sidewalk bid item.

The curb transitions and ramp opening shall be measured and paid for at the contract unit price per foot for the corresponding curb and gutter bid item when curb and gutter is used. The curb transitions and ramp opening shall be measured and paid for at the contract unit price per square yard for the corresponding PCC fillet section bid item when a PCC fillet section is used.

All costs for furnishing and installing the transition area at the base of the curb ramp shall be incidental to the contract unit price per foot for the corresponding curb and gutter bid item when curb and gutter is used and shall be incidental to the contract unit price per square yard for the corresponding PCC fillet section bid item when a PCC fillet section is used.

The type I detectable warnings shall be measured to the nearest square foot. All costs for furnishing and installing the type I detectable warnings including labor, equipment, materials, and incidentals shall be paid for at the contract unit price per square foot for "Type I Detectable Warnings".

The type 2 detectable warnings shall be measured to the nearest square foot. All costs for furnishing and installing the type 2 detectable warnings including labor, equipment, and materials, including adhesive, necessary sealant or grout, and necessary grinding shall be paid for at the contract unit price per square foot for "Type 2 Detectable Warnings".

- 3 Width of boulevard as specified in the plans.
- T Thickness of PCC sidewalk as specified in the plans.
- W Width of PCC sidewalk as specified in the plans.
- \* Type as specified in the plans.

#### GENERAL NOTES:

#### PLAN VIEW

The PCC sidewalk shall be constructed in accordance with Section 651 of the Specifications.

\*\*\*The cross slope of the sidewalk is designed at 1.5% and the maximum slope allowed is 2% unless specified otherwise in the plans.

The maximum length between expansion joints in PCC sidewalk is 75 feet.

PCC sidewalk placed adjacent to intersection of roadways shall have an expansion joint placed transversely a maximum of 37.5 feet from the intersection. See PLAN VIEW. An expansion joint in PCC sidewalk shall consist of a  $\frac{1}{2}$  inch thick preformed expansion joint filler material placed full depth and width of the PCC sidewalk.

\*\*Large areas of PCC pavement adjacent to PCC sidewalk may require a different joint treatment than shown in the detail. If a different joint detail is necessary, plans will contain the joint detail and the Contractor shall construct the joint treatment in accordance with the plans.

#### GENERAL NOTES:

Prior to placement of the erosion control blanket, the areas shall be properly prepared, shaped, seeded, and fertilized.

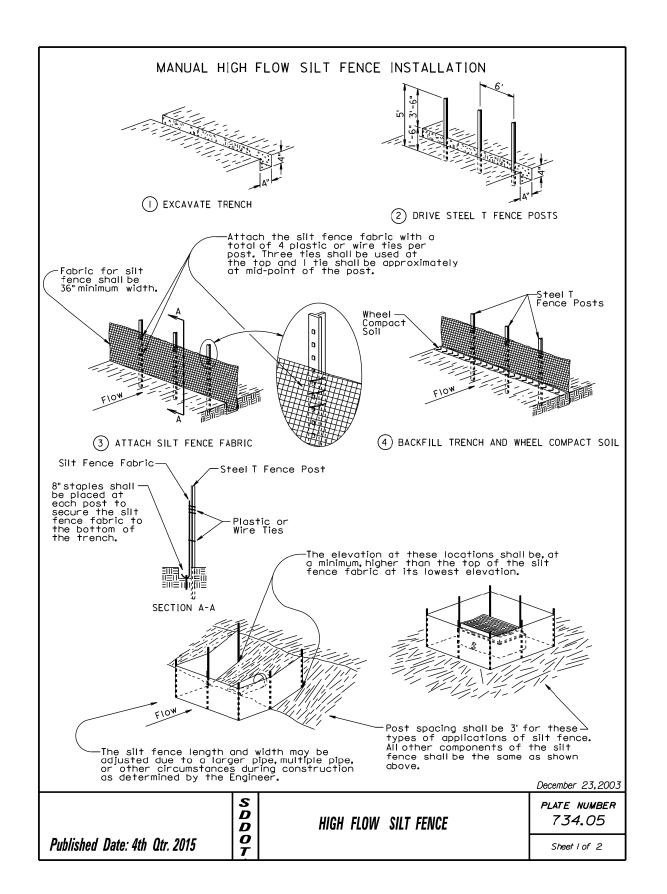

Erosion control blanket shall be unrolled in the direction of the flow of water when placed in ditches and on slopes. The upslope end of the erosion control blanket shall be buried in a trench 6" wide by 6" deep. There shall be at least a 6" overlap wherever one roll of erosion control blanket ends and another begins, with the upslope erosion control blanket placed on top of the downslope erosion control blanket.

The erosion control blanket shall be pinned to the ground according to the manufacturer's installation recommendations.

After the placement of the erosion control blanket, the Contractor shall fine grade along all edges of the blanket to maintain a uniform slope adjacent to the blanket and level any low spots which might prevent uniform and unrestricted flow of side drainage directly onto the erosion control blanket.

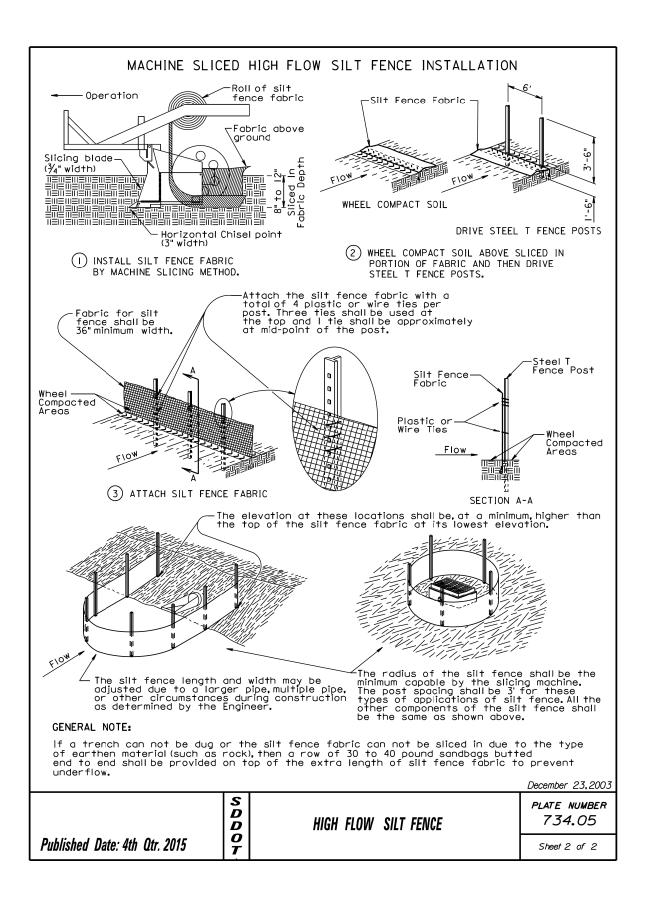

All ditch sections shall be shaped when installing the erosion control blanket. All costs for shaping the ditches shall be incidental to the contract unit price per foot for "Shaping for Erosion Control Blanket".

#### ISOMETRIC VIEW

#### GENERAL NOTES:

Published Date: 4th Qtr. 2015

The grate and curb and gutter shown are for illustrative purposes only.

The sediment control at inlet with frame and grate shall be placed at locations stated in the plans or at locations determined by the Engineer.

The filter fabric shall be the type specified in the plans.

The filter fabric shall be placed in the inlet opening prior to placing the grate. Approximately 18 inches of excess filter fabric shall be wrapped around the 2"x4" and stapled securely to the 2"x4" after the grate has been placed.

The Contractor shall inspect and maintain the sediment control device once every week and within 24 hours after every rainfall event. The Contractor shall maintain the sediment control device by removing accumulated sediment and replacing torn filter fabric with new filter fabric.

The removed sediment shall be placed at a location away from the drop inlet where the sediment will not be washed back into the drop inlet or other storm sewer system.

All costs for furnishing, installing, inspecting, maintaining, removing, and replacing the sediment control device at the inlet including labor, equipment, and materials shall be incidental to the contract unit price per each for "Sediment Control at Inlet with Frame and Grate".
